

The new Hydrologic Unit Map (HUC) is the most detailed map of the United States ever published. It is the result of a major effort by the U.S. Geological Survey (USGS) to improve the nation's hydrologic data base. The HUC is a national map of the United States showing the hydrologic units of the country. It is the most detailed map of the United States ever published. It is the result of a major effort by the U.S. Geological Survey (USGS) to improve the nation's hydrologic data base.

HYDROLOGIC UNIT BOUNDARIES

- Regional
- Subregional
- Counties
- Watersheds

HYDROLOGIC UNIT CODE

Hydrologic unit codes are a unique system of numbers used to identify hydrologic units. The code is composed of two parts: a regional code and a subregional code. The regional code is a two-digit number that identifies the region. The subregional code is a three-digit number that identifies the subregion. The hydrologic unit code is a five-digit number that identifies the hydrologic unit.
