[^2]:    ${ }^{27}$ The recipiency targeting index quantifies the extent to which such households are receiving LIHEAP assistance. The index is computed by comparing the percent of LIHEAP recipient households that are members of a target group with the percent of all LIHEAP income eligible households that are members of the target group. An index score above 100 indicates that LIHEAP is serving a target group of households at a higher rate than the eligible household population.
