ACKNOWLEDGEMENTS

This report was prepared under a health physics and support contract by the Occupational and Environmental Department of Battelle-Pacific Northwest Laboratories.

We also acknowledge and thank the Union Carbide Corporation, Oak Ridge, Tennessee, and EG&G Idaho, Inc., for their assistance in the preparation of this report.

PREFACE

In 1968, the U.S. Atomic Energy Commission (AEC) established a program for reporting certain occupational radiation exposure* information to a central radiation records repository maintained at the Union Carbide Computing Technology Center, Oak Ridge, Tennessee. Annual summaries (WASH-1350-R1 through WASH-1350-R6) were reported for the years 1968-1973 and included data on AEC contractor employees as well as employees of companies in the private sector licensed by the AEC.

In January 1975, the operational functions of the AEC, including the maintenance of records on the occupational radiation exposure of contractor employees, were transferred to the Energy Research and Development Administration (ERDA) and the AEC's regulatory functions, including the reporting of information on the occupational radiation exposure of licensees, were transferred to the Nuclear Regulatory Commission (NRC). Previous AEC licensees then reported to NRC while the contractors reported to ERDA. Radiation exposure data for AEC/ERDA and AEC/ERDA contractor employees for 1974 and 1975 were reported in ERDA 76/119 and ERDA 77-29. The 1976 data for ERDA and ERDA contractor employees were reported in DOE/EV-0011/9.

On October 1, 1977, the Department of Energy (DOE) was formed and assumed the responsibilities of ERDA. This report contains the 1977 radiation exposure data for DOE and DOE contractors.

Previous reports for AEC/ERDA, AEC/ERDA contractor employees may be seen at the DOE Public Documents Room, 1000 Independence Avenue, SW, Washington, D.C. 20585.

*The word "exposure" is herein synonymous with "dose equivalent".

WHOLE BODY RADIATION EXPOSURES

General Trends

Radiation exposure data for AEC/ERDA/DOE and AEC/ERDA/DOE contractor employees* for years 1974-1977 are plotted in Figure 1. This shows that approximately 50% of the total workers monitored do not receive measurable dose equivalents.

Data obtained from DOE reports on occupational exposures for 1964-1977 are presented in Tables 1 and 3. These data were used to generate Table 2 and Figure 2 which show that the percent of individuals monitored who receive dose equivalents greater than 1 rem and greater than 2 rem has declined significantly in the past 14 years. Table 2 presents the collective dose equivalent (man-rem) for DOE and DOE contractor employees for 1974 through 1977. The collective dose equivalents have been estimated by using the midpoint of each dose equivalent range shown in Table 1.

*Henceforth referred to as DOE and DOE contractor employees.

*Throughout this report minor variations in collective dose equivalent values may occur due to computer rounding.

TABLE 3
**DISTRIBUTION OF EMPLOYEES WHO RECEIVED ANNUAL WHOLE BODY
DOSE EQUIVALENTS GREATER THAN 1 REM AND GREATER
THAN 2 REM - 1964 - 1977**

| Year | Number Employees Monitored | Number of Employees With Annual Whole Body Dose Equivalents | | Collective Dose Equivalent (man-rem)* |
|------|----------------------------------|-------------------------------------------------------------------|---------|---------------------------------------------|
| | | > 1 rem | > 2 rem | |
| 1964 | 128965 | 6254 | 2671 | 13411 |
| 1965 | 135214 | 6854 | 2696 | 14918 |
| 1966 | 137932 | 6410 | 2704 | 14173 |
| 1967 | 108386 | 5876 | 2404 | 12583 |
| 1968 | 107986 | 4780 | 1981 | 9877 |
| 1969 | 102918 | 4293 | 1739 | 8706 |
| 1970 | 96661 | 4476 | 1778 | 9135 |
| 1971 | 94315 | 3675 | 1295 | 7357 |
| 1972 | 89460 | 3383 | 1253 | 6769 |
| 1973 | 91977 | 2906 | 962 | 5623 |
| 1974 | 78232 | 2548 | 881 | 4944 |
| 1975 | 88425 | 2974 | 1128 | 6111 |
| 1976 | 90200 | 2231 | 552 | 3984 |
| 1977 | 95220 | 2255 | 676 | 4251 |

*This column reflects the trend in high exposures since individuals with dose equivalents of less than 1 rem have been excluded. The annual collective dose equivalent has been estimated by using the midpoint of each dose equivalent range shown in Table 1.

Figure 2. PERCENT OF EMPLOYEES WITH WHOLE BODY DOSE EQUIVALENTS GREATER THAN 1 AND 2 REM

STANDARDS FOR RADIATION PROTECTION

DOE (ERDA) Manual Chapter 0524, Standards for Radiation Protection, is applicable to DOE and DOE contractor operations not subject to Nuclear Regulatory Commission licensing.

Two basic requirements exist for all DOE operations. The first requirement is that all operations shall be conducted in a manner to assure that radiation exposure to individuals and population

groups is limited to the lowest levels technically and economically practicable. The second requirement is that radiation exposure to individuals or population groups be maintained below prescribed limits. The DOE prescribed limits for occupationally exposed individuals are given in the following table as excerpted from DOE (ERDA) Manual Chapter 0524:

INDIVIDUALS IN CONTROLLED AREAS

RADIATION PROTECTION STANDARDS FOR EXTERNAL AND INTERNAL DOSE EQUIVALENTS

| Type of Exposure | Exposure Period | Dose Equivalent (Dose or Dose Commitment* (rem)) |
|------------------------------------------------------------------------------------------------------------------|--------------------------|--------------------------------------------------|
| Whole body, head and trunk, gonads, lens of the eye**, red bone marrow, active blood forming organs. | Year Calendar Quarter | 5*** 3 |
| Unlimited areas of the skin (except hands and forearms). Other organs, tissues, and organ systems (except bone). | Year Calendar Quarter | 15 5 |
| Bone | Year Calendar Quarter | 30 10 |
| Forearms**** | Year Calendar Quarter | 30 10 |
| Hands**** and feet | Year Calendar Quarter | 75 25 |

*To meet the above dose commitment standards, operations must be conducted in such a manner that it would be unlikely that an individual would assimilate in a critical organ, by inhalation, ingestion, or absorption, a quantity of a radionuclide(s) that would commit the individual to an organ dose which exceeds the limits specified in the above table.

**A beta exposure below a maximum energy of 700 keV will not penetrate the lens of the eye; therefore, the applicable limit for these energies would be that for the skin (15 rem/year).

***In special cases with the approval of the Director, Operational and Environmental Safety Division, a worker may exceed 5 rem/year provided his/her average exposure per year since age 18 will not exceed 5 rem/year.

****All reasonable effort shall be made to keep exposure of forearms and hands to the general limit for the skin.

DISTRIBUTION OF ANNUAL WHOLE BODY EXPOSURES BY FACILITY TYPE FOR 1977

Table 4 provides a breakdown of the 1977 whole body dose equivalents according to facility type. Table 5 shows that employees working in reactor, fuel processing, and accelerator facilities continue to receive the highest average exposures. The general research and other facilities accounted for approximately 42 percent of the total dose equivalent.

Appendix A contains whole body exposure distributions by facility type as reported by each of the 11 DOE operations offices or Naval Reactors offices.

Appendix B contains whole body exposure distributions for each contractor. These are placed alphabetically under their respective DOE operations office or Naval Reactors office.

Appendix C contains whole body exposure distributions for each DOE operations office.

AVERAGE DOSE EQUIVALENT RATIOS

It is known that dose equivalent data are inadequate in assessing whether radiation exposures are reduced to as low as practicable. Variables such as facility age and design, along with all the other factors which enter into accomplishing the program objectives may far outweigh the efforts of management, radiation workers, and safety personnel in reducing personnel exposures to the levels that exist at similar facilities elsewhere.

In some instances, it might be desirable to compare average radiation dose equivalents associated with the same facility type but at different locations. Average dose equivalent ratios have been calculated for each facility type under an operations office and are presented in Table 6. The average dose equivalent ratio is defined as the ratio of the average personnel dose equivalent for a facility type within an operations office and the average personnel dose equivalent for the facility type. The numbers in Table 6 are derived by discarding all dose equivalents less than 0.5 rem. By discarding numbers less than 0.5 rem, it is intended to include only those people working in the radiation areas. No interpretation of these numbers is possible other than those numbers less than 1 indicate a low average dose equivalent relative to the average for that facility type while those ratios greater than 1 indicate a higher average dose equivalent.

TABLE 7
DOSE DISTRIBUTIONS FROM INTERNAL BODY DEPOSITIONS

| Radionuclide | Critical Organ | Dose Equivalent Ranges (rem) | | | | |
|----------------------------------|-------------------------|------------------------------|-------|-------|-------|--------|
| | | 7.5-10 | 10-15 | 15-25 | 25-50 | 50-100 |
| Depositions prior to 1977 | | | | | | |
| U-234, U-235, U-238 | Lung | 6 | 2 | | | |
| U-235 | Lung | 3 | | | | |
| Pu-238, Pu-239, Pu-240 | Bone Liver Kidney | 1 1 | 1 | 1 | 1 | 1 |
| Pu-238 | Bone Liver | | 1 | | | |
| Am-241 | Bone Liver | | | 1 | | 1 |
| 1977 Depositions | | | | | | |
| Pu-238 | Lung | 1 | 1 | 1 | | |

*Nineteen persons were reported in 1977 as receiving internal doses that exceeded 50% of the annual dose limit to the critical organ from depositions prior to 1977. Three persons were reported as receiving doses exceeding 50% of the annual limit to the lung from depositions during 1977.

WORKER TERMINATIONS

There were 10354 monitored workers in 1977 who terminated their employment with DOE or DOE contractors. Table 8 gives the length of employment as well as the average cumulative dose equivalent for the workers in each time interval. These data indicate that the average annual dose equivalent for workers terminating in 1977 was a small fraction of the 5-rem-per-year limit.

TABLE 8
LENGTH OF EMPLOYMENT FOR INDIVIDUALS TERMINATING IN 1977

| | 1-90 Days | 90-180 Days | 180-365 Days | 1-2 Years | 2-4 Years | 4-6 Years | >6 Years |
|---------------------------------------------|--------------|----------------|-----------------|--------------|--------------|--------------|-------------|
| Total Number | 2659 | 1664 | 1120 | 1009 | 1217 | 527 | 2158 |
| Total Cumulative Dose Equivalent (rem) | 1105 | 306 | 366 | 249 | 1071 | 556 | 6086 |
| Average Cumulative Dose Equivalent (rem) | 0.42 | 0.18 | 0.33 | 0.25 | 0.88 | 1.06 | 2.82 |

WHOLE BODY DOSE EQUIVALENTS GREATER THAN 5 REM

Five persons received whole body dose equivalents greater than 5 rem during 1977. Their dose equivalents ranged from 8.0 rem to 17.8 rem. In each instance an investigation was conducted and procedures established to reduce the probability of a similar occurrence.

*The average dose equivalent ratio is defined as the average personnel dose equivalent for a facility type within an operations office divided by the average personnel dose equivalent for that facility type within DOE and DOE contractors.

INTERNAL EXPOSURES

DOE (ERDA) Manual Chapter 0525 required DOE contractors to submit a report on personnel with an internal body deposition of radioactive materials. A report was required when:

- A. Any uptake of radioactive material occurring during the reporting year that, either independently, or when added to a current burden, was estimated to result in a dose commitment to the critical organ in excess of 50 percent of the pertinent annual dose equivalent standards set forth in Appendix 0524.
- B. Any previously unreported uptake of radioactive material that was determined to have been reportable according to the above criteria by reason of more recent dose equivalent estimates.

The annual dose equivalent unit for the lungs, liver, and thyroid is 15 rem each, while for the bone it is 30 rem.

In 1977, 25 workers were determined to have radioactive material in their bodies which resulted in a dose equivalent to the critical organ in excess of 50 percent of the annual dose equivalent limit. Twenty-two of these workers met this criteria due to an internal body deposition of radioactive materials prior to 1977. Table 7 gives a breakdown of these 25 cases.
