

DEPARTMENT OF THE ARMY PERMIT
Regional Permit 29
Sand and Gravel Excavation Activities
in the State of Missouri

Permit Number: CEMVR-OD-P-

Section: 404

Permittee:

POC:

Tel:

Effective Date:

Expiration Date:

[NOTE: The expiration date for individual authorization under the regional permit will not extend beyond December 31, 2010.]

Issuing Office: U.S. Army Corps of Engineers, Rock Island District
Clock Tower Building - P.O. Box 2004
Rock Island, Illinois 61204-2004

You are authorized to perform work in accordance with the terms and conditions specified below.

NOTE: The term "you" and its derivatives, as used in this permit, means the permittee or any future transferee. The term "this office" refers to the appropriate district or division office of the Corps of Engineers having jurisdiction over the permitted activity or the appropriate official of that office acting under the authority of the commanding officer.

Project Description: To

Project Location:

in accordance with the plans and drawings attached hereto which are incorporated in and made a part of this permit.

Drawings No. CEMVR-OD-P-

Permit Conditions:

General Conditions:

1. The time limit for completing the work authorized ends on the date specified on page 1. If you find that you need more time to complete the authorized activity, submit your request for a time extension to this office for consideration at least one month before that date is reached.
2. You must maintain the activity authorized by this permit in good condition and in conformance with the terms and conditions of this permit. You are not relieved of this requirement if you abandon the permitted activity, although you may make a good faith transfer to a third party, in compliance with General Condition 4 below. Should you wish to cease to maintain the authorized activity or should you desire to abandon it without a good faith transfer, you must obtain a modification of this permit from this office, which may require restoration of the area.
3. If you discover any previously unknown historic or archaeological remains while accomplishing the activity authorized by this permit, you must immediately notify this office of what you have found. We will initiate the Federal and state coordination required to determine if the remains warrant a recovery effort or if the site is eligible for listing in the National Register of Historic Places.
4. If you sell the property associated with this permit, you must obtain the signature of the new owner in the space provided and forward a copy of the permit to this office to validate the transfer of this authorization.
5. If a conditioned water quality certification has been issued for your project, you must comply with the conditions specified in the certification as special conditions to this permit. For your convenience, a copy of the certification is attached if it contains such conditions. (Condition is not applicable for Section 10 Permits.)
6. You must allow representatives from this office to inspect the authorized activity at any time deemed necessary to ensure that it is being or has been accomplished in accordance with the terms and conditions of your permit.

Special Conditions:

1. This permit authorizes the discharge of dredged and/or fill material related to mechanical sand and gravel excavation. Discharges authorized are limited to those which occur during the actual excavation process and those associated with preparation and restoration of the site.
2. This permit applies to the general public and governmental agencies when such activities are performed to provide immediate construction materials or materials stockpiled in an upland area for private use or commercial sale. Excavation and dredging activities occurring in flowing or open water, such as hydraulic dredging, are not included in this authorization.
3. Individual projects may occur in waters of the United States, including activities upstream of the defined headwater point, within the State of Missouri, excluding the Missouri and Mississippi Rivers, and waters designated by the State of Missouri as Outstanding National Resource Waters or Outstanding State Resource Waters (see attached list, state regulation 10 CSR 20-7.031).

4. The following restrictions are applicable:

a. You must sign and return the "Compliance Certification" page after you complete the authorized work and any required mitigation. Your signature will certify that you completed the work in accordance with this permit, including general and specific conditions, and that any required mitigation was completed in accordance with the permit conditions.

b. The permittee understands and agrees that, if future operations by the United States require the removal, relocation, or other alteration, of the structure or work herein authorized, or if, in the opinion of the Secretary of the Army or his authorized representative, said structure or work shall cause unreasonable obstruction to the free navigation of the navigable waters, the permittee will be required, upon due notice from the Corps of Engineers, to remove, relocate, or alter the structural work or obstructions caused thereby, without expense to the United States. No claim shall be made against the United States on account of any such removal or alteration.

c. If any part of the authorized work is performed by a contractor or other party, before starting work you must discuss the terms and conditions of this permit with the contractor or party; and, you must give a copy of this entire permit to the contractor or other party involved in the excavation activities. The permittee remains responsible for ensuring compliance with all aspects of this permit.

d. You must limit excavation of sand or gravel deposits to unconsolidated areas containing primarily smaller material (at least 85% of material is less than 3" in diameter) that is loosely packed and contains no woody perennial vegetation greater than 1-inch in diameter, measured at breast height (4.5 feet).

e. You must maintain an undisturbed buffer of twenty (20) feet (or as specified on the attached project authorization page(s) of this permit) between the removal area and the water line at the time of excavation, and between the removal area and bank vegetation. Personal use activities involving excavation under 100 cubic yards of material, as specified in Appendix I, paragraph 3, must maintain an undisturbed buffer of ten (10) feet in the areas specified previously.

f. You must maintain a twenty five (25) foot wide streamside (riparian) corridor in an undisturbed condition landward of the high bank for the length of the gravel removal site. Disturbed areas in this riparian zone shall be limited to maintained access road(s) for ingress and egress only. No clearing within this riparian area is authorized in association with work authorized by this permit.

g. You must not excavate sand or gravel below the elevation of the water at the time of removal. If the stream is dry at that time, you must not excavate deeper than the lowest undisturbed elevation of the stream bottom adjacent to the site, unless specified otherwise on the attached project authorization page(s) of this permit.

h. You must not relocate, straighten, or otherwise modify water conveyance areas within the channel. A "water conveyance area within the channel" is defined as that area between the high banks of the creek where water is flowing or, in the case of a dry stream, where water would flow after a rain event.

i. Within 30 days of the removal of excavation equipment from the site, you must revegetate or otherwise protect from erosion, those streambank areas disturbed by the removal operation. For long-term operations (longer than 30 days) or for sites that will be periodically revisited as gravel is deposited, access points must be appropriately constructed and maintained such that streambanks and access roads are protected from erosion. The use of Reed Canary Grass is prohibited.

j. Prior to the removal of excavation equipment from the site, oversized material or other disturbed bed material must be removed or replaced in the removal area and smoothed to approximately the original contours of the sand or gravel deposit, as much as possible. Oversized material retained on-site (not imported from off-site) is preferred when available as it better stabilizes the disturbed bar. All required buffer areas must remain intact and should not be smoothed as part of this condition. Any aggregate, fines, and/or oversized material removed from the site must be placed in an upland, nonwetland site that has been approved by the landowner. No material, including oversized, that results from the excavation activity may be stockpiled or otherwise placed into flowing water or placed against streambanks as bank stabilization, unless specifically authorized in writing by the Corps of Engineers.

k. You must conduct all sand or gravel washing, gravel crushing, and gravel sorting above the high bank, in a nonwetland area away from areas that flood, such that gravel, silt, and wash water that is warm, stagnant, or contains silty material can not enter the stream or any wetland. A separate permit and/or settling basin for the discharge of return water may be required under Section 402 of the Clean Water Act from the Missouri Department of Natural Resources, Water Protection Program, NPDES Permits and Engineering Section (573-751-6825). Gravel crushing and/or sorting activities which do not require wash water are allowed to occur on the gravel bar, provided all fines are immediately removed from the gravel bar and not stockpiled or otherwise disposed of on the gravel bar, into the stream or any other water of the U.S. (including wetlands). All fines resulting from the sorting operation must be captured in a transport truck or other suitable container and removed from the sorting location to an upland, non-wetland location the same day the sorting occurs. All sorted aggregate must be removed from the gravel bar at the end of each working day, with the exception of oversized material that will be spread out in the excavation area following project completion.

l. You must not excavate in those areas authorized by this regional permit during the dates and locations specified below. This time period restriction is for the purpose of protecting spawning habitat and juvenile fish as well as other aquatic life indigenous to the cited stream.

- South Fabius River (approximately 42.5 miles) from the US Highway 61 bridge in Marion County (Section 23, Township 59 North, Range 7 West) to the Shelby County line (Section 18, Township 59 North, Range 8 West) during the period March 15 to June 15.

- Troublesome Creek (approximately 16.2 miles) from the South Fabius River in Marion County (Section 13, Township 59 North, Range 7 West) to the Lewis County line (Section 2, Township 59 North, Range 8 West) during the period March 15 to June 15.

m. You must limit vehicles and other equipment to removal sites and existing crossings. Streams must be crossed perpendicular to the stream. You must obtain written approval from the Corps of Engineers, Regulatory Branch, before constructing any temporary or permanent stream crossing(s). Use of off road vehicles in streams is also regulated under Missouri State Law (RSMo 1991 Section 304.013).

n. Fuel, oil, and other wastes and equipment containing such wastes shall not be stored nor released at any location between the high banks or in a manner such that they could enter the stream channel. You must dispose of such materials at authorized locations.

o. No activity is authorized under this regional permit which is likely to jeopardize the continued existence of a threatened or endangered species or a species proposed for such designation, as identified under the Federal Endangered Species Act, or which is likely to destroy or adversely modify the habitat of such species. See Appendix II, paragraph No. 1 for permitting requirements if these species are likely to be present or their habitat would be adversely modified.

p. No activity which may affect Historic properties listed, or eligible for listing, in the National Register of Historic Places is authorized, until the District Engineer has complied with the provisions of 33 CFR 325, Appendix C. All prospective permittees must notify the District Engineer if the excavation activity may affect any historic properties listed, determined to be eligible, or which the prospective permittee has reason to believe may be eligible for listing on the National Register of Historic Places, and shall not begin the activity until notified by the District Engineer that the requirements of the National Historic Preservation Act have been satisfied and that the activity is authorized. Information on the location and existence of historic resources can be obtained from the State Historic Preservation Office and the National Register of Historic Places.

q. You must provide notification to the appropriate Corps of Engineers district, as specified in Appendix I, before you initiate any gravel removal activity and receive written confirmation of authorization under this regional permit from the Corps of Engineers before you start any excavation or related operations.

r. Your use of the permitted activity must not interfere with the public's right to free navigation on all navigable waters of the United States (Section B of Appendix A to 33 CFR 325).

s. That the conditions listed in the attached Section 401 water quality certification from the Missouri Department of Natural Resources dated March 15, 2001, are considered to be part of this permit.

APPENDIX I - CRITERIA FOR AUTHORIZATION

1. The appropriate District Engineer has the discretion to require an individual permit on a case-by-case basis for any activity authorized herein.
2. This regional permit applies to the general public and governmental agencies when such activities are performed to provide immediate construction materials or materials stockpiled in an upland area for private use or commercial sale. Excavation and dredging activities occurring in flowing or open water, such as hydraulic dredging, are not included in this authorization.
3. Private property owners are authorized to remove up to a total of 100 cubic yards of gravel per year from any single gravel bar location on their property, for their personal use, without regard to special condition q. (notification requirements). Excavation activities for personal use must comply with all conditions of this permit. This does not relieve any personal use applicant from notifying the appropriate Corps district if the activity may affect a Federally threatened or endangered species or its habitat (see Appendix II, Endangered Species Consultation). If you have any questions concerning threatened and endangered species possibly occurring in your project area, you should contact the appropriate Corps of Engineers district or the U.S. Fish and Wildlife Service.

Note to Commercial Operators: As set forth in the Land Reclamation Act, Chapter 444.770.3, RSMo, this Section 10 and 404 permit may satisfy your permitting requirements with the Missouri Department of Natural Resources' Land Reclamation Program (LRP). If your activity is authorized by this regional permit, the Corps of Engineers will forward a copy of this permit to the LRP. You should contact the LRP at 573-751-4041 to determine whether or not an LRP permit is also required.

APPENDIX II - CORPS REVIEW PROCEDURES FOR AUTHORIZATION (For Corps Use Only)

ENDANGERED SPECIES CONSULTATION. The excavation activity must not be located in any waterbody identified as containing potential habitat for any Federally listed threatened or endangered species unless, following coordination with the U.S. Fish and Wildlife Service, a "no effect" or "not likely to adversely affect" determination is agreed upon between the Corps of Engineers and the U.S. Fish and Wildlife Service. These waterbody locations will be maintained by the Corps of Engineers and will be referenced for each individual activity.

Activities authorized under this regional permit may affect the following species and/or habitat; Arkansas darter, Neosho madtom, Niangua darter, Topeka shiner, Curtis' pearlymussel, Fat pocketbook, Neosho mucket, Pink mucket pearlymussel, Scaleshell, Sheepnose, Spectaclecase, Winged mapleleaf, Ozark hellbender, Indiana bat, Hine's emerald dragonfly, and Bald eagle. The Corps of Engineers will maintain a list of waters where the activities authorized under this permit may affect such listed species or designated critical habitat. If the proposed activity is located in any water included in this list, the following conditions must be met and will be coordinated by the appropriate Corps of Engineers District:

- 1) Each proposed activity within the range of the above species must be coordinated with the U.S. Fish and Wildlife Service and Missouri Department of Conservation to allow for timely, site specific evaluation and concurrence that the activity, as conditioned under the regional permit, is not likely to adversely affect listed species or designated critical habitat.
- 2) Additional project specific conditions must be imposed if, through timely informal consultation between the Service and the Corps, they are determined to be necessary to avoid the likelihood of adverse effects to listed species or designated critical habitat.
- 3) In the event that the likelihood of adverse effects to listed species or designated critical habitat cannot be avoided, authorization will not be provided under the regional permit until such time as: i) formal consultation between the Service and the Corps is provided; ii) a non-jeopardy Biological Opinion is issued; and iii) the terms and conditions of any associated Incidental Take Statement are incorporated as enforceable conditions to the project authorization under the regional permit.

Further information:

1. Congressional Authorities: You have been authorized to undertake the activity described above pursuant to:

() Section 10 of the Rivers and Harbors Act of 1899 (33 U.S.C. 403).

(X) Section 404 of the Clean Water Act (33 U.S.C. 1344).

() Section 103 of the Marine Protection, Research and Sanctuaries Act of 1972 (33 U.S.C. 1413).

2. Limits of this authorization.

a. This permit does not obviate the need to obtain other Federal, state, or local authorizations required by law.

b. This permit does not grant any property rights or exclusive privileges.

c. This permit does not authorize any injury to the property or rights of others.

d. This permit does not authorize interference with any existing or proposed Federal project.

3. Limits of Federal Liability. In issuing this permit, the Federal Government does not assume any liability for the following:

a. Damages to the permitted project or uses thereof as a result of other permitted or unpermitted activities or from natural causes.

b. Damages to the permitted project or uses thereof as a result of current or future activities undertaken by or on behalf of the United States in the public interest.

c. Damages to persons, property, or to other permitted or unpermitted activities or structures caused by the activity authorized by this permit.

d. Design or construction deficiencies associated with the permitted work.

e. Damage claims associated with any future modification, suspension, or revocation of this permit.

4. Reliance on Applicant's Data: The determination of this office that issuance of this permit is not contrary to the public interest was made in reliance on the information you provided.

5. Reevaluation of Permit Decision. This office may reevaluate its decision on this permit at any time the circumstances warrant. Circumstances that could require a reevaluation include, but are not limited to, the following:

a. You fail to comply with the terms and conditions of this permit.

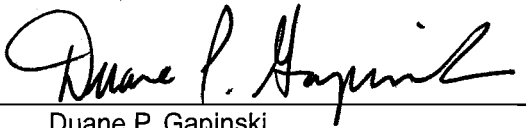

b. The information provided by you in support of your permit application proves to have been false, incomplete, or inaccurate (See 4 above).

c. Significant new information surfaces which this office did not consider in reaching the original public interest decision.

Such a reevaluation may result in a determination that it is appropriate to use the suspension, modification, and revocation procedures contained in 33 CFR 325.7 or enforcement procedures such as those contained in 33 CFR 326.4 and 326.5. The referenced enforcement procedures provide for the issuance of an administrative order requiring you to comply with the terms and conditions of your permit and for the initiation of legal action where appropriate. You will be required to pay for any corrective measures ordered by this office, and if you fail to comply with such directive, this office may in certain situations (such as those specified in 33 CFR 209.170) accomplish the corrective measures by contract or otherwise and bill you for the cost.

6. Extensions. General condition 1 establishes a time limit for the completion of the activity authorized by this permit. Unless there are circumstances requiring either a prompt completion of the authorized activity or a reevaluation of the public interest decision, the Corps will normally give favorable consideration to a request for an extension of this time limit.

This permit becomes effective when the Federal official, designated to act for the Secretary of the Army, has signed below.

Duane P. Gapinski
Colonel, U.S. Army
District Engineer, Rock Island District

3/24/06
Date

When the structures or work authorized by this permit are still in existence at the time the property is transferred, the terms and conditions of this permit will continue to be binding on the new owner(s) of the property. To validate the transfer of this permit and the associated liabilities associated with compliance with its terms and conditions, have the transferee sign and date below.

November 9, 2005

Colonel Michael A. Rossi
U.S. Army Corps of Engineers
Kansas City District
700 Federal Building
601 East 12th Street
Kansas City, MO 64106-2896

Various Counties
GP-34M/CEK002493
Reissuance

Dear Colonel Rossi:

The Missouri Department of Natural Resources' Water Protection Program has reviewed Public Notice No. GP-34M/CEK002493 in which the applicant proposes to reissue General Permit 34 Missouri (GP-34M) which would authorize the discharge of dredged or fill material in association with excavation of sand and gravel in waters of the United States within the State of Missouri. This general permit would be reissued under the authority of Section 404 of the Clean Water Act (33 USC 1344) and Section 10 of the Rivers and Harbors Act of 1899 (33 USC 403). This general permit was originally issued December 18, 1995, reissued March 16, 2001, and expires December 21, 2005. A total of 520 activities have been verified utilizing GP-34M from 1995 to present in the Kansas City District.

This office certifies that the ongoing activity apparently will not cause the general or numeric criteria to be exceeded nor impair beneficial uses established in Water Quality Standards, 10 CSR 20-7.031, provided the following conditions are met:

1. With regard to Appendix I, number 3, private property owners excavating pursuant to this criteria should maintain at least a ten (10) foot wide buffer of undisturbed area left between the water line and the excavation area, and between the bank and the excavation area. This is the minimum buffer width that is considered sufficient to contain sediment and prevent a turbidity plume in the stream.
2. A general permit is not applicable to Outstanding National Resource Waters or Outstanding State Resource Waters (see state regulation 10 CSR 20-7.031). An individual permit should be obtained for sand and gravel excavation in these waters. The Army Corps of Engineers (Corps) should take note that the state Water Quality Standards require no lowering of water quality in these waters, and should carefully review operations proposed on locations upstream (including tributaries) or downstream of these segments to ensure that this standard is upheld.

Colonel Michael A. Rossi (GP-34M/CEK002493)

Page 2

November 9, 2005

3. Projects undertaken on water bodies listed on Missouri's Impaired Waters list for sedimentation should utilize Best Management Practices to prevent release of sediment.
4. The department reserves the right to reopen review should cumulative impacts of more than one operation or impacts of any single operation on any waterbody have detrimental effects on water quality or aquatic habitat. This could include revocation of a certification for any operation that has a detrimental effect on water quality.

If you were affected by this decision, you may appeal to have the matter heard by the administrative hearing commission. To appeal, you must file a petition with the administrative hearing commission within thirty (30) days after the date this decision was mailed or the date it was delivered, whichever date was earlier. If any such petition is sent by registered mail or certified mail, it will be deemed filed on the date it is mailed; if it is sent by any method other than registered mail or certified mail, it will be deemed filed on the date it is received by the administrative hearing commission.

Water Quality Standards must be met during any operations authorized by these permits. If you have any questions, please call Ms. Gail Wilson of the NPDES Permits and Engineering Section at (573) 526-1535, e-mail at gail.wilson@dnr.mo.gov, or by mail at Missouri Department of Natural Resources, Water Protection Program, P.O. Box 176, Jefferson City, MO 65102-0176.

Sincerely,

WATER PROTECTION PROGRAM

Peter Goode, P.E., Chief
