Nevada Test Site
2006 Illness and Injury Surveillance Report

At A Glance

A total of 3,960 NTS employees were included in illness and injury surveillance in 2006. There were 1,126 (28 percent) women and 2,834 (72 percent) men in the work force. The number of workers at NTS has steadily declined since 2003. The 2006 work force has 10 percent fewer workers than in 2003.

There were 182 absences among 146 women, resulting in an absence rate of 16.2 per 100 workers ($182/1,126$). Among the 2,834 men, there were 276 absences, resulting in an absence rate of 9.7 per 100 workers ($276/2,834$).

Security workers had the highest absence rate among men, 14.8 per 100 workers (61/411). Among women, Crafts workers had the highest rate, 26.8 per 100 workers (22/82).

The absence rate was 11.6 per 100 workers in 2006, which is a 65 percent increase since 2003. This increase in the rate of absences has also been observed at other sites participating in IISP over the period 1995 to 2004.

Among both men and women, musculoskeletal disorders were among the most common diagnoses reported since 2003. In addition, respiratory disorders were common among women and injuries were common among men.

Women lost 4,644 calendar days due to illness and injury. Respiratory diseases (10 percent), unspecified symptoms (17 percent), and musculoskeletal disorders (18 percent) accounted for 45 percent of all reported diagnoses among women.

Men lost 6,372 calendar days due to illness and injury. Forty-seven percent of all reported diagnoses among men were due to injuries (16 percent), musculoskeletal disorders (16 percent), and unspecified symptoms (15 percent).

Fourteen sentinel health event occupational (SHEO) diagnoses were reported in 2006. Ten diagnoses were for carpal tunnel syndrome. Five (50 percent) of the carpal tunnel syndrome diagnoses were reported by Crafts workers who comprised 18 percent of the work force.

OSHA-Recordable Events

Men reported 58 OSHA-recordable events in 2006 and women reported 14 events. The rate of OSHA events was 2 per 100 workers among men and 1 per 100 workers among women.

The rate of OSHA events has increased from 1 per 100 workers in 2003 to 2 per 100 workers in 2006, which is contrary to the decreasing rates seen among other sites participating in IISP during the period 1995 to 2004.

Occupational illnesses and injuries resulted in a total of 1,748 lost or restricted workdays reported by NTS in 2006. Crafts workers had the highest rate of OSHA events among women (9.8 per 100 workers), while Security and Fire workers had the highest rate among men (5.4 per 100 workers).

Injuries accounted for at least 50 percent of diagnoses for both men and women, with the most common type being unspecified injuries and sprains and strains, respectively.

The accidents most commonly reported among men and women were overexertion and strenuous movements and being struck by an object.

When the rate for OSHA-recordable injuries was considered separately, the highest rates were among Crafts workers for both men and women. This occupational group comprised 18 percent of the work force but reported 49 percent of the OSHA events.

Sentinel Health Events for Occupations (SHEOs)

An occupational sentinel health event (SHEO) is a disease, disability, or death that is likely to be occupationally related. Although sentinel health events may indicate an occupational exposure, many may result from nonoccupational exposures. Sentinel health events are therefore assessed in two categories:

Definite Sentinel Health Events: Diseases that are unlikely to occur in the absence of an occupational exposure (e.g., asbestosis).

Possible Sentinel Health Events: Diseases that may be occupational but can also occur in the absence of an occupational exposure (e.g., lung cancer or carpal tunnel syndrome).
