

A concussion is a brain injury. Concussions are caused by a bump, blow, or jolt to the head. They can range from mild to severe and can disrupt the way the brain normally works.

Most people will only experience symptoms from a concussion for a short period of time. But sometimes concussion can lead to longlasting problems. The best way to protect yourself and your family from concussions is to prevent them from happening.

### **How to Prevent a Concussion**

There are many ways to reduce the chances that you or your family members will have a concussion or more serious brain injury:

- Wear a seat belt every time you drive or ride in a motor vehicle.
- Buckle your child in the car using a child safety seat, booster seat, or seat belt (according to the child's height, weight, and age).
  - Children should start using a booster seat when they outgrow their child safety seats (usually when they weigh about 40 pounds). They should continue to ride in a booster seat until the lap/shoulder belts in the car fit properly, typically when they are approximately 4'9" tall.
- Never drive while under the influence of alcohol or drugs.
- Wear a helmet and make sure your children wear helmets that are fitted and maintained properly when:
  - Riding a bike, motorcycle, snowmobile, scooter, or all-terrain vehicle;
  - Playing a contact sport, such as football, ice hockey, lacrosse, or boxing;
  - Using in-line skates or riding a skateboard;
  - Batting and running bases in baseball or softball;
  - Riding a horse; or
  - Skiing, sledding, or snowboarding.
- Ensure that during athletic games and practices, you and/or your children:
  - Use the right protective equipment (should be fitted and maintained properly in order to provide the expected protection);
  - Follow the safety rules and the rules of the sport;
  - Practice good sportsmanship; and
  - Do not return to play with a known or suspected concussion until you have been evaluated and given permission by an appropriate health care professional.
- Make living areas safer for seniors by:
  - Removing tripping hazards such as throw rugs and clutter in walkways;
  - Using nonslip mats in the bathtub and on shower floors;
  - Installing grab bars next to the toilet and in the tub or shower;
  - Installing handrails on both sides of stairways;
  - Improving lighting throughout the home; and
  - Maintaining a regular exercise program to improve lower body strength and balance, if your health care professional agrees.
- Make living areas safer for children by:
  - Installing window guards to keep young children from falling out of open windows;
  - Using safety gates at the top and bottom of stairs when young children are around;
  - Keeping stairs clear of clutter;
  - Securing rugs and using rubber mats in bathtubs; and
  - Not allowing children to play on fire escapes or on other unsafe platforms.
- Make sure the surface on your child's playground is made of shock-absorbing material, such as hardwood mulch or sand, and is maintained to an appropriate depth.

# When to Call the Doctor: Signs and Symptoms of Concussion

Here is a list of common signs and symptoms of a concussion.

If you or a family member has an injury to the head and you notice <u>any</u> of the symptoms on the list, call your doctor right away. Describe the injury and symptoms and ask if you should make an appointment to see your doctor or another specialist.

## Signs and Symptoms of Concussion

- Difficulty thinking clearly
- Feeling slowed down
- Difficulty concentrating
- Difficulty remembering
- Difficulty following conversation or directions
- Answers questions more slowly or repeatedly
- Dazed or stunned

- Headache
- Nausea or vomiting
- Clumsiness or balance problems
- Dizziness
- Fuzzy or blurry vision
- Feeling tired all of the time, having no energy
- Sensitivity to light
- Sensitivity to noise
- Numbness/tingling

- Irritability
- Sadness
- More emotional
- Nervousness or anxiety
- Sleeping more than usual
- Sleeping less than usual
- Trouble falling asleep
- Drowsiness

When you visit your doctor, here are some important questions to ask:

- What can I do to help my recovery from this injury?
- When is it safe to get back to my daily routine, such as school, work, or playing sports and doing other physical activities?
- What can I do to keep from injuring myself again?

For more information, contact...

#### **Centers for Disease Control and Prevention (CDC)**

CDC's National Center for Injury Prevention and Control works to reduce disability, deaths, and costs associated with injuries. CDC has a wide variety of resources and materials about concussion and other types of injuries. Call CDC

toll-free at 1-800-CDC-INFO (1-800-232-4636) or visit CDC's Injury Center on the Web at www.cdc.gov/injury.

#### **Defense and Veterans Brain Injury Center**

The Defense and Veterans Brain Injury Center (DVBIC) identifies active duty military and veterans with brain injury and provides resources to ensure they receive the best evaluation, treatment, and follow-up. Call DVBIC toll-free at 1-800-870-9244 or visit DVBIC on the Web at www.dvbic.org.

#### **Brain Injury Association of America**

The Brain Injury Association of America (BIAA) focuses on prevention, research, education, and advocacy. BIAA has a national network of more than 40 state affiliates across the country and hundreds of local chapters and support groups. Call BIAA toll-free at 1-800-444-6443 or visit BIAA on the Web at www.biausa.org.
