### Key

- 
- F: Monitoring and measuring health disparities
  - B: Studying health in minority or disadvantaged populations (usually a single group)
  - C: Investigating the causes of health disparities by examining how resources and behaviors relevant to health and mechanisms producing health/illness vary across populations.
  - D: Intervention studies to test ways of reducing health disparities within or across groups.
  - E: Research on or actual dissemination, communication, and outreach.
  - A: Building infrastructure at minority/disadvantaged institutions; developing minority/disadvantaged scientists (training); training related to research on health disparities.
