## Detailed Diagnoses and Procedures, National Hospital Discharge Survey, 1988

Series 13:  
Data From the National Health Survey  
No. 107

This report presents statistics on conditions diagnosed and surgical and nonsurgical procedures performed in non-Federal short-stay hospitals. The statistics are based on data collected through the National Hospital Discharge Survey from a national sample of the hospital records of discharged inpatients. Estimates of first-listed diagnoses, all-listed diagnoses, days of care for first-listed diagnoses, and all-listed procedures are shown by sex and age of patient and geographic region of hospital.

### *Cooperation of the U.S. Bureau of the Census*

Under the legislation establishing the National Health Survey, the Public Health Service is authorized to use, insofar as possible, the services or facilities of other Federal, State, or private agencies.

In accordance with specifications established by the National Center for Health Statistics, the U.S. Bureau of the Census, under a contractual arrangement, participated in planning the survey and collecting the data.

# Detailed Diagnoses and Procedures, National Hospital Discharge Survey, 1988

by Edmund J. Graves, Division of Health Care Statistics

## Introduction

The purpose of this report is to provide detailed data from the National Hospital Discharge Survey (NHDS). Data for 1988 are shown by age and sex of the patient and geographic region of the hospital for conditions diagnosed and surgical and nonsurgical procedures performed. The report is intended as a source document for researchers and others who need data for detailed diagnostic and procedure categories. Similar reports have been published with data for 1977 (1), 1978 (2), 1979 (3), 1983 (4), 1984 (5), 1985 (6), 1986 (7), and 1987 (8).

The survey has been conducted continuously by the National Center for Health Statistics (NCHS) since 1965. Estimates are produced from a sample of inpatient records that are obtained from a national sample of short-stay non-Federal general and specialty hospitals in the United States. The 1988 sample included approximately 250,000 medical records from 422 hospitals that participated in the survey.

The original universe for the survey consisted of 6,965 short-stay hospitals contained in the 1963 National Master Facility Inventory of Hospitals (NMFI). The universe was updated periodically from the lists of hospitals provided by the American Hospital Association. A description of the development of the original survey, which was in operation since 1964, has been published (9).

Beginning in 1988, NHDS was redesigned in order to link it with other surveys conducted by NCHS and to improve efficiency through the use of information and technologies that were not available when the survey was first designed in 1964. Differences between NHDS statistics based on the 1965-87 sample and statistics based on the 1988 sample may be due to sample design rather than to real changes in hospital utilization.

The redesigned survey uses a three-stage stratified sample based on hospitals contained in the April 1987 Hospital Market Data Tape from SMG Marketing Group, Inc. (10). Only hospitals accepting inpatients by August 1987 were included. A brief description of the new design, along with information about data collection procedures, the estimation process, and relative standard errors, can be found in appendix I.

Familiarity with NHDS definitions is important to interpret the data properly and to compare them with statistical data on short-stay hospital utilization that are available from other sources. Definitions of the terms used in this report are presented in appendix II. The medical data for hospital patients are coded according to the *International Classification of Diseases, 9th Revision, Clinical Modification (ICD-9-CM)* (11). (See appendix III for ICD-9-CM codes.) This coding system is updated periodically. Therefore, the reader is cautioned that annual estimates for new ICD-9-CM codes are underestimated for 1988. For a fuller discussion of this problem see the introduction to appendix IV. New ICD-9-CM codes for 1986-88 are shown in a conversion table in appendix IV. Information about newborn infants, although collected through the survey, is excluded from this report.

Information on short-stay hospital utilization is also collected through the National Health Interview Survey (NHIS) of NCHS. Estimates from that survey generally differ from NHDS estimates because of differences in collection procedures, populations sampled, and definitions. Data from NHIS are published in Series 10 of *Vital and Health Statistics*. However, data on the detailed diagnoses and procedures published in this report are not available through NHIS.

# Use of tables

The detailed tables in this report show the conditions diagnosed and procedures performed by the detailed code numbers of the *International Classification of Diseases, 9th Revision, Clinical Modification* (11). Measurements of hospital utilization are shown in terms of numbers of first-listed and all-listed diagnoses, of days of care for first-listed diagnoses, and of procedures performed for the individuals discharged.

## Presentation of estimates

Tables 1–3 provide information by ICD–9–CM 3-, 4-, and 5-digit diagnostic codes. Table 4 shows 2-, 3-, and 4-digit procedure codes. A specific code appears in the tables if the estimate of the total for the code has a relative standard error (a measure of the reliability of the data) no larger than 30 percent. The codes that appear in table 2 for days of care are identical to those in table 1 for first-listed diagnoses. Only an asterisk (\*) is shown in the tables if the relative standard error of an estimate for a sex or age group or a region is larger than 30 percent.

In addition, all estimates of diagnoses and procedures less than 9,000 are preceded by an asterisk to indicate that they are based on a relatively small sample of discharge records. These estimates are generally based on less than 60 records. Days of care estimates derived from less than 9,000 estimated discharges are also indicated by asterisks. These estimates are usually less than 59,000.

The total for all codes presented at the beginning of each table includes estimates for codes not shown in the table. Likewise, the total for each diagnostic chapter or procedure category includes estimates for all the codes in the chapter or category, whether or not they are shown individually. Estimates for 5-digit codes may not add to the 4-digit total, 4-digit codes to the 3-digit total, or, for procedures, 3-digit codes to the 2-digit total because the totals include estimates for codes not shown or because the data were rounded to the nearest thousand for presentation.

Although 4- and 5-digit diagnostic codes are presented together under the 3-digit codes of which they are a part, the estimates for 4- and 5-digit codes cannot be added to obtain the estimate for the 3-digit code. For example, in table 1 the estimate for first-listed diagnosis code 008 is 104,000. If the estimates for the 4- and 5-digit codes included in 008 are added, the total would be

110,000. This occurs because the estimate of 9,000 for code 008.49 is part of the estimate of 11,000 for code 008.4 and thus cannot be added to it. Similarly, estimates for 3- and 4-digit codes cannot be added together to obtain the estimate for a 2-digit code.

## Diagnostic data

The first-listed diagnosis is the diagnosis identified as the principal diagnosis or listed first on the face sheet of the medical record. The number of all-listed diagnoses includes first-listed diagnoses and other diagnoses appearing on the medical record. At present, a minimum of one and up to a maximum of seven diagnoses are coded; before 1979, however, the maximum number was five.

With regard to all-listed diagnoses, it should be pointed out that there is a certain amount of “double coding” inherent in the ICD–9–CM; that is, certain diagnoses require the coding of two diagnostic codes. For example, females with deliveries all have one additional diagnostic code that indicates the outcome of their delivery (single liveborn; twins, both liveborn; and the like).

## Procedure data

Procedures include surgical and nonsurgical operations, diagnostic procedures, and special treatments. Since 1979, up to four procedures have been coded for each discharge, an increase from the maximum of three procedures coded in preceding years. In addition, before 1979 only figures for “surgical” operations, excluding some obstetrical procedures, were published (12,13). Since then, data on many diagnostic, nonsurgical, and obstetric procedures have been published. Appendix II includes a list of the ICD–9–CM procedure codes that are not used in the NHDS.

## Computation of other statistics

The data in tables 1–4 can be used to compute other hospital use statistics, such as rates of diagnoses and average lengths of stay for diagnoses. In general, a rate is the ratio between one statistic (for example, number of discharges) and another statistic (for example, the population) for a given period of time (such as 1 year). Usually the resulting figure is multiplied by some constant

(for example, 100, 1,000, or 10,000) to produce rates greater than one. The rates shown in most National Hospital Discharge Survey publications are rates of discharges, diagnoses, and procedures per 1,000, 10,000, or 100,000 civilian population for a given year.

Based on data in tables 1–4, rates were calculated for the major diagnostic and procedure groups for first-listed diagnoses and days of care, all-listed diagnoses, and all-listed procedures. These rates are shown in tables A–D.

The population used in computing these rates is shown in appendix I.

An average length of stay is calculated by dividing the number of days of care by the number of discharged patients. This statistic can be calculated for first-listed diagnoses by dividing the days of care of patients with the diagnosis from table 2 by the number of patients with the diagnosis from table 1. The average lengths of stay for major diagnostic groups are presented in table E.

**Table A. Rate of first-listed diagnoses for inpatients discharged from short-stay non-Federal hospitals, by diagnostic chapter (with ICD-9-CM codes), sex and age of patient, and geographic region of hospital: United States, 1988**

## Technical notes on methods

### Statistical design of the National Hospital Discharge Survey

*Scope of the survey*—The National Hospital Discharge Survey (NHDS) covers discharges from noninstitutional hospitals, exclusive of Federal, military, and Veterans Administration hospitals, located in the 50 States and the District of Columbia. Only short-stay hospitals (hospitals with an average length of stay for all patients of less than 30 days) or those whose specialty is general (medical or surgical) or children's general are included in the survey. These hospitals must also have six beds or more staffed for patient use.

*NHDS history*—The National Center for Health Statistics (NCHS) has conducted the NHDS continuously since 1965. The original sample was selected in 1964 from a frame of short-stay hospitals listed in the National Master Facility Inventory. That sample was updated periodically with samples of hospitals that opened later. Sample hospitals were selected with probabilities ranging from certainty for the largest hospitals to 1 in 40 for the smallest hospitals. Within each sample hospital, a systematic random sample of discharges was selected. The development and design of the original NHDS has been published (9).

Until 1985, all data were collected by a system in which sample selection and transcription of information were done manually. Starting in 1985 some data were also collected using a system in which NCHS purchased data tapes containing discharge medical abstracts from commercial abstracting services and selected the samples from those tapes.

In 1988, the NCHS redesigned the NHDS to link it with other surveys conducted by NCHS and to improve efficiency through use of information and technologies that were not available when the survey was first designed in 1964. Details of the new design are outlined below.

The changes in the survey may affect trend data. That is, some of the differences between NHDS estimates based on the 1965–87 sample and estimates based on the 1988 sample may be due to survey redesign rather than to real changes in hospital utilization.

*1988 sampling design*—The NHDS sampling frame consists of hospitals that were listed in the April 1987 SMG Hospital Market Data Tape (10) and that began to accept inpatients by August 1987. The NHDS sample includes with certainty all hospitals with 1,000 beds or

more or 40,000 discharges or more annually. The remaining sample of hospitals is based on a stratified three stage design.

The first stage consists of 112 primary sampling units (PSU's) that comprise a probability subsample of PSU's used in the 1985–94 National Health Interview Survey (NHIS). The PSU's are counties, groups of counties, county equivalents (such as parishes or independent cities), or towns and townships (for some PSU's in New England). The NHDS sample includes with certainty the 26 PSU's with the largest populations. In addition, the sample includes half of the next 26 largest PSU's, and 1 PSU from each of 73 PSU strata formed from the remaining PSU's for the NHIS sample design. Those 73 PSU strata were defined within four geographical regions and were assigned metropolitan statistical area (MSA) or non-MSA status by using 1980 Census of Population data and a computer program that minimized the between-PSU variances for NHIS stratification variables. (MSA is a metropolitan statistical area defined by the U.S. Office of Management and Budget on the basis of the 1980 Census.) From the 73 strata thus formed, the PSU's were selected with probability proportional to the projected 1985 population. A more detailed analysis of the NHIS PSU sample design is presented in a Series 2 *Vital and Health Statistics* report (14).

The second stage consists of noncertainty hospitals selected from the sample PSU's. To assure distribution of the sample across PSU's and to maximize the potential for automated data collection, the noncertainty hospitals in those PSU's were stratified. The strata were defined by region, PSU, and in the 12 largest PSU's, by abstracting status (whether or not the hospital subscribes to a commercial abstracting service). Within the strata, the hospitals were ordered by PSU, abstracting service status, and the hospital specialty-size groups defined in table I. Within each specialty-size group, hospitals were arrayed by their annual numbers of discharges recorded in the April 1987 SMG Hospital Market Data Tape. Hospitals were then selected from each stratum's ordered array by systematic random sampling with probability proportional to their SMG recorded 1987 annual numbers of discharges. The sampling rates were such that at least three hospitals were selected from every PSU containing three eligible hospitals or more. In PSU's with fewer than three hospitals, all hospitals in the PSU were selected. For 1988,

**Table I. Definition of noncertainty hospital specialty-size groups used as secondary strata in the National Hospital Discharge Survey 1988 sample design**

Hospital group	Bed size	Type of service
Group 1 . . . . .	6-999 beds	Selected specialties <sup>1</sup>
Group 2 . . . . .	6-174 beds	General (medical and surgical) and other specialties <sup>2</sup>
Group 3 . . . . .	175-349 beds	General (medical and surgical) and other specialties <sup>2</sup>
Group 4 . . . . .	350-999 beds	General (medical and surgical) and other specialties <sup>2</sup>

<sup>1</sup>Includes psychiatry; tuberculosis and other respiratory disease; rehabilitation; chronic disease; mental retardation; alcoholism and other chemical dependency; and children's psychiatry.  
<sup>2</sup>"Other specialties" include: obstetrics and gynecology; eye, ear, nose, and throat; orthopedics; other specialty; children's general; children's tuberculosis and other respiratory disease; children's eye, ear, nose, and throat; children's rehabilitation; children's orthopedics; children's chronic disease; and children's other specialty.

**Table II. Hospitals in the National Hospital Discharge Survey universe and sample, the number of in-scope and responding sample hospitals, and response rates, by geographic region: United States, 1988**

Hospital region and size	Universe	Total sample	Sample in-scope <sup>1</sup>	Respondents <sup>2</sup>	Response rate
					Percent
All hospitals . . . . .	6,400	542	531	422	79
Region					
Northeast . . . . .	931	117	116	101	87
Midwest . . . . .	1,797	120	118	87	74
South . . . . .	2,458	219	215	174	81
West . . . . .	1,214	86	82	60	73

<sup>1</sup>Excludes hospitals that for the whole year either were out of business or failed to meet the definition of a general, a children's general, or a short-stay hospital.  
<sup>2</sup>Hospitals for which data were collected by National Center for Health Statistics for at least half of the number of sample discharges expected in half or more of the months the hospitals were in scope.

the sample consisted of 542 hospitals. Of the 542 hospitals, 11 were found to be out of scope (ineligible) because prior to 1988 they went out of business or otherwise failed to meet the criteria for the NHDS universe. Of the 531 in-scope (eligible) hospitals, 422 hospitals responded (NCHS collected data for at least half of the number of sample discharges expected in half or more of the months these hospitals were in scope). The number of hospitals in the universe, the sample, and the responding sample are shown by region in table II.

At the third stage, a sample of discharges from each hospital was selected by a systematic random sampling technique. For hospitals using the manual system of data collection, the discharges were selected at the hospital from daily listing sheets, computer files, or other lists in which discharges were listed in some chronological order. For most of these hospitals, the sample discharges were selected on the basis of the terminal digit(s) of the patient's medical record number. In some cases, an admission number, billing number, or other number was used. If no patient numbers useful for sampling purposes were available in a hospital's list of discharges, the sample was selected by starting with a randomly selected discharge and taking every *k*th discharge thereafter.

For hospitals whose data were collected via the automated system, the discharges were selected by NCHS from discharge medical abstract files after sorting by the first two digits of the ICD-9-CM code of the first-listed diagnosis, patient age group at time of admission (under 1 year, 1-14 years, 15-44 years, 45-64 years, 65-74 years, 75-84 years, 85 years and over, and age unknown), sex, and date of discharge. These samples were selected by starting with a randomly selected discharge and taking every *k*th discharge thereafter.

The third-stage sampling rate was determined by the hospital's sampling stratum and the system (manual or automated) used to collect data from the hospital. One percent and 5 percent of discharges in the certainty hospitals were selected under the manual and automated systems, respectively. Except for certainty hospitals, the target sample size was 250 discharges each from all manual system hospitals and from the automated system hospitals that had fewer than 4,000 discharges annually according to the 1987 sampling frame data. Samples of 2,000 were targeted for each of the remaining noncertainty automated system hospitals. The final sample for 1988 included about 250,000 discharge medical record abstracts.

### Data collection and processing

*Data collection*—Two data collection procedures were used for the survey. One was a manual system of sample selection and data abstraction. The other was an automated method, used with approximately 37 percent of the respondent hospitals in 1988, that involved the purchase of data tapes from abstracting service organizations.

In the manual system, the sample selection and the transcription of information from the hospital records to abstract forms were performed at the hospitals. The completed forms, along with sample selection control sheets, were then forwarded to NCHS for coding, editing, and weighting. A few of these hospitals submitted their data via computer printout or tape. Of the hospitals using the manual system in 1988, about two-thirds had the work performed by their own medical records staff. In the remaining hospitals using the manual system, personnel of the U.S. Bureau of the Census did this work on behalf of

NCHS. For the automated system, NCHS purchased tapes containing machine-readable medical record data from abstracting service organizations and selected sample discharges from these tapes.

Figure I shows the information collection form used in 1988. This form and the records on abstract service data tapes contain items relating to personal characteristics of the patient, including birth date, sex, race, ethnicity, marital status, ZIP Code, (but not name and address), and expected sources of payment; administrative information, including admission and discharge dates, discharge status, and medical record number; and medical information, including diagnoses, surgical and nonsurgical operations or procedures, and dates of surgery. These data items conform with the Uniform Hospital Discharge Data Set (UHDDS) (15). The PSU, hospital name, medical record number, and patient ZIP Code are confidential information and are not available to the public.

*Medical coding and edit*—The medical information recorded on the sample patient abstracts that was collected by the manual system was coded by NCHS staff. A maximum of seven diagnostic codes were assigned for each sample abstract; in addition, if the medical information included surgical or nonsurgical procedures, a maximum of four codes for these procedures were assigned. The system currently used for coding the diagnoses and procedures on the medical abstract forms, as well the data that appear on the commercial abstracting services data tapes, is the *International Classification of Diseases, 9th Revision, Clinical Modification*, or ICD-9-CM (11). All of the diagnostic codes and most of the procedure codes in the ICD-9-CM are used with the exception of selected procedure codes in Chapter 16 (see appendix II).

With two exceptions, the order of diagnoses and procedures for sampled discharges is preserved to reflect the order on the medical record face sheet or in the abstracting service file. One exception is for women admitted for delivery. In this case, a code of V27 from the supplemental classification must be assigned and it must be listed first. In the other exception, a decision was made to reorder some acute myocardial infarction diagnoses based on accepted medical coding practice. Whenever an acute myocardial infarction is encountered with other circulatory diagnoses and is other than the first entry, it must be reordered to first position.

An ongoing quality control program is undertaken on the coding and entering of data from abstracts to machine readable form. Approximately 5 percent of the abstracts are independently recoded by an NHDS coder, with discrepancies resolved by the chief coder. The overall error rate for records manually coded by NCHS for the 1988 data year was 2.8 percent for medical (ICD-9-CM) coding and entering and 0.4 percent for demographic coding and entering.

Following conversion of the data on the medical abstract to computer tape and combining the data with the automated data tapes, a final medical edit was performed by computer inspection and by a manual review of

rejected abstracts. If the sex or age of the patient was incompatible with the recorded medical information, priority was given to the medical information in the editing decision.

## Presentation of estimates

*Grouping of diagnoses and procedures*—In this report, the diagnostic chapters, the broadest groupings of disease and injuries shown, correspond to ICD-9-CM chapters 1-17 and the supplementary classification of factors influencing health status and contact with health services. The procedure groupings used in this report are the groups numbered 1-16 in the ICD-9-CM section entitled "Procedure classification."

*Patient characteristics not stated*—Age or sex of the patient were not stated for about 2 percent of the sample discharges for 1988. These data were imputed by assigning the patient an age or sex consistent with the age or sex of other sampled patients with the same diagnostic code. Data on race were not available for 9 percent of the discharges, and missing values were not imputed. During 1988, 0.08 percent of the sampled records lacked an admission or discharge date. For these cases a length of stay was imputed based on age unless the discharge was a newborn or a female with delivery, in which case a length of stay was assigned similar to the length of stay of sampled cases in these categories.

In addition to the edits performed by NCHS, data obtained through the automated system may have been edited by an abstract service and had data imputed. The extent of this imputation, if any, is unknown.

*Rounded numbers*—Estimates in this report have been rounded. Therefore, detailed figures may not add to totals. Rates and percents were calculated using unrounded figures and may not agree with computations made from the rounded data.

*Population estimates*—The population estimates used in computing rates are from published and unpublished estimates for the U.S. civilian population, including institutionalized persons, on July 1 of the data year provided by the U.S. Bureau of the Census. The estimates by age, sex, and geographic region are presented in table III and are consistent with the population estimates published in *Current Population Reports*, Series P-25. Rates computed using these population estimates will be overestimates to the extent that military personnel and non-U.S. citizens use NHDS-eligible hospitals and will be underestimates to the extent that civilians (for example, military dependents or retirees) use hospitals that are not in the NHDS universe, that is, hospitals that are institutional, Federal, military, veteran, or long-stay hospitals that are not general, maternal, or children's general hospitals.

*Published and flagged estimates*—Estimates are not presented unless a reasonable assumption regarding the probability distribution of the sampling error is possible on the basis of the Central Limit Theorem. The Central Limit Theorem states that, given a sufficiently large sample size, the sample estimate approximates the population

**CONFIDENTIAL** — All information which would permit identification of an individual or of an establishment will be held confidential, will be used only by persons engaged in and for the purposes of the survey, and will not be disclosed or released to other persons or used for any other purpose.

**Table III. Civilian population, by sex, age, and geographic region: United States, July 1, 1988**

[Population estimates consistent with Series P-25, Current Population Reports, U.S. Bureau of the Census]

<i>Sex, age, and geographic region</i>	<i>Population</i>
Total . . . . .	244,125
<b>Sex</b>	
Male . . . . .	118,223
Female . . . . .	125,902
<b>Age</b>	
Under 15 years . . . . .	53,111
15-44 years . . . . .	114,694
45-64 years . . . . .	45,953
65 years and over . . . . .	30,367
<b>Geographic region</b>	
Northeast . . . . .	50,478
Midwest . . . . .	59,739
South . . . . .	83,791
West . . . . .	50,118

estimate, and upon repeated sampling, its distribution would be approximately normal.

Based on consideration of the complex sample design of the NHDS, the following guidelines are used for presenting the NHDS estimates:

- If the relative standard error of an estimate is larger than 30 percent, the estimate is not shown. Only an asterisk (\*) appears in the tables.
- If the sample size is less than 60, the value of the estimate should not be assumed to be reliable. The estimate is preceded by an asterisk (\*) in the tables.

### Estimation procedures

Statistics from NHDS are derived by a multistage estimation procedure that produces essentially unbiased national estimates and has three basic components: (1) inflation by reciprocals of the probabilities of sample selection, (2) adjustment for nonresponse, and (3) population weighting ratio adjustments. The second and third components were made separately by admission types— that is, for discharges of newborn infants (whose hospital stay began with their own births) and for discharges to other than newborn infants.

*Inflation by reciprocals of probabilities of selection*— There is one probability for each stage of sampling: (a) the probability of selecting the PSU, (b) the probability of selecting the hospital, and (c) the probability of selecting the discharge within the hospital. The last probability varies monthly and is calculated to be the sample size from the hospital for the month divided by the total number of discharges occurring at the hospital that month. The overall probability of selection is the product of the probabilities at each stage. The inverse of the overall selection probability is the basic inflation weight.

*Adjustment for nonresponse*— NHDS data were adjusted to account for two types of nonresponse. The first

type of nonresponse occurred when an in-scope (NHDS eligible) sample hospital did not respond for more than half of the months during which it was in scope, thus making it a nonrespondent hospital. In this case, the weights of discharges from hospitals similar to the nonrespondent hospitals were inflated to account for discharges represented by the nonrespondent hospitals. For this purpose, hospitals were judged to be similar if they were in the same region, hospital specialty-size group, and if possible, the same sampling stratum (that is, the same abstracting status group if the nonrespondent hospital was in the 12 largest PSU's and in the same PSU, otherwise). The adjustments for this nonresponse were made separately for admission types—that is, for discharges of newborn infants and for all other discharges. The adjustment consisted of a ratio for which the numerator was the weighted number of discharges of the admission type in all similar sample hospitals (regardless of response status) and the denominator was the weighted total of discharges of that admission type from the hospitals similar to the nonrespondent hospitals. Data on the number of discharges for each admission type for each hospital came from either the hospitals or the April 1989 SMG Hospital Market Data Tape (10).

The second type of nonresponse occurred when NCHS failed to collect all the discharge abstracts expected (the number expected is the product of the hospital's total discharges each month and the discharge sampling rate assigned to the hospital). In each month when the hospital was respondent (at least half the expected abstracts were collected), the weights of abstracts collected for the month were inflated to account for the missing abstracts. For a hospital's month(s) of nonresponse, the weights of discharges in the hospital's respondent months were inflated by ratios that varied with discharge groups defined by the ICD-9-CM diagnostic classes of those discharges' first-listed diagnoses. The adjustment ratio for each partially respondent hospital and each discharge group was calculated using only data from sample hospitals that were both NHDS eligible and respondent for all 12 months of the data year. The ratio had as its numerator the weighted sum of discharges in that discharge group for all months in which the partially respondent hospital was in scope and had as its denominator the weighted sum of discharges in that discharge group that occurred in the months when the partially respondent hospital did respond to the NHDS.

*Population weighting ratio adjustment*— Adjustments were made within each of 16 noncertainty hospital groups defined by region and hospital specialty-size classes to adjust for oversampling or undersampling of discharges reported in the sampling frame for the data year. For discharges other than newborn infants, the adjustment is a multiplicative factor that had as its numerator the number of admissions reported for the year at sampling frame hospitals within each region-specialty-size group and as its denominator the estimated number of those admissions for that same hospital group. The adjustment for

discharges of newborn infants was similar, but numbers of births were used in place of admissions. The ratio numerators were based on the figures obtained from the SMG Hospital Market Data Tape (10) and the ratio denominators were obtained through a simple inflation of the SMG figures for the NHDS sample hospitals.

## Reliability of estimates

*Nonsampling errors*—As from any survey, results are subject to nonsampling errors, which include errors that are due to sampling frame errors, hospital nonresponse, missing abstracts, and recording processing errors. The magnitude of the nonsampling errors cannot be determined. However, errors resulting from the exclusion of in-scope hospitals from the sampling frame are believed to be small because the hospitals excluded are hospitals that opened after the frame was constructed and, hence, they tend to have few discharges relative to hospitals that are in the frame. Other nonsampling errors are kept to a minimum by methods built into the survey procedures, such as training the data collectors in sampling and data abstraction, quality checks of sampling and abstracting, manual and computer editing, and verification of keypunching and coding. Some nonsampling errors are discussed under “Presentation of estimates.”

*Sampling errors*—Because the statistics presented in this report are based on a sample, they may differ from the figures that would be obtained if a complete census had been taken using the same forms, definitions, instructions, and procedures. However, the probability design of NHDS permits the calculation of sampling errors. The standard error is primarily a measure of sampling variability that occurs by chance because only a sample rather than the entire population is surveyed. The standard

error, as calculated for the NHDS, also reflects part of the variation that arises in the measurement process, but does not include estimates of any systematic bias. The chances are about 68 in 100 that an estimate from the sample would differ from a complete census by less than the standard error. The chances are about 95 in 100 that the difference would be less than twice the standard error, and about 99 in 100 that it would be less than 2.5 times as large.

The relative standard error of an estimate is obtained by dividing the standard error by the estimate. The resulting value is multiplied by 100, which expresses the relative standard error as a percent of the estimate.

Estimates of sampling variability were calculated with SESUDAAN software, which computes standard errors by using a first-order Taylor approximation of the deviation of estimates from their expected values. A description of the software and the approach it uses was published (16).

*Relative standard errors for aggregate estimates*—The constants for relative standard error curves for the National Hospital Discharge Survey aggregate statistics by statistic type are presented in table IV. The relative standard error [RSE (*X*)] of an estimate *X* may be estimated from the formula:

$$RSE(X) = \sqrt{a + b/x}$$

where *X*, *a*, and *b* are as defined in table IV.

*Relative standard errors for estimates of percents*—The relative standard errors for a percent  $100 * p$  ( $0 < p < 1$ ) may be calculated directly using the formula:

$$RSE(p) = 100 \sqrt{b*(1-p)/(p-X)}$$

where  $100 * p$  is the percent of interest, *X* is the base of the percent, and *b* is the parameter *b* in the formula for

Table IV. Estimated parameters for relative standard error equations for National Hospital Discharge Survey statistics, by characteristics: United States, 1988

Characteristic	Number of discharges, first-listed diagnoses, or all-listed diagnoses		Number of days of care		Number of procedures

45–64 years . . . . .	0.00361	139.812	0.00366	1,102.740	0.00374	463.928
65 years and over . . . . .	0.00262	248.331	0.00312	2,314.965	0.00351	442.050
Region						
Northeast . . . . .	0.00432	154.474	0.00421	1,003.567	0.00493	285.834
Midwest . . . . .	0.01049	215.711	0.01152	1,086.414	0.01138	464.393
South . . . . .	0.00637	194.720	0.00733	1,722.863	0.00833	449.500
West . . . . .	0.00858	221.258	0.01053	1,188.078	0.01193	571.693

NOTE: The relative standard error (RSE) for any estimate (*X*) can be determined from the equation  $RSE(X) = \sqrt{a + b/x}$ .

approximating the  $RSE(X)$ . The values for  $b$  are given in table IV.

The approximation is valid if the relative standard error of the denominator is less than 0.05 or the relative standard errors of the numerator and denominator are both less than 0.10 (17,18).

*RSE for average length of stay and other averages, ratios, or rates where the numerator is not a subclass of the denominator*—If the denominator of the rate is a number produced by the U.S. Bureau of the Census for the total U.S. population or one or more of the age-sex-race groups of the total population, then the approximate relative standard error of the rate is equivalent to the relative standard error of the numerator that can be obtained from table IV.

If the numerator  $X$  and denominator  $Y$  are both estimated from the NHDS, then the relative standard

error of the ratio  $X/Y$  is approximated by

$$RSE(X/Y) = \sqrt{[RSE(X)]^2 + [RSE(Y)]^2}$$

This approximation is valid if the relative standard error of the denominator is less than 0.05 or the relative standard errors of the numerator and denominator are both less than 0.10 (18,19).

*Estimates of differences between two statistics*—The relative standard errors shown in this appendix are not directly applicable to differences between two sample estimates. The standard error of a difference is approximately the square root of the sum of squares of each standard error considered separately. This formula represents the standard error quite accurately for the difference between separate and uncorrelated characteristics, although it is only a rough approximation in most other cases.

# Appendix II

## Definitions of certain terms used in this report

### Terms relating to hospitalization

*Hospitals*—All hospitals with an average length of stay for all patients of less than 30 days or hospitals whose specialty is general (medical or surgical) or children's general are eligible for inclusion in the National Hospital Discharge Survey except Federal hospitals and hospital units of institutions, and hospitals with less than six beds staffed for patients' use.

*Patient*—A person who is formally admitted to the inpatient service of a short-stay hospital for observation, care, diagnosis, or treatment. The terms "patient" and "inpatient" are used synonymously.

*Newborn infant*—A patient admitted by birth to a hospital.

*Discharge*—The formal release of a patient by a hospital; that is, the termination of a period of hospitalization by death or by disposition to place of residence, nursing home, or another hospital. The terms "discharges" and "patients discharged" are used synonymously.

*Discharge rate*—The ratio of the number of hospital discharges during a year to the number of persons in the civilian population on July 1 of that year.

*Days of care*—The number of patient days accumulated at time of discharge by a patient. A stay of less than 1 day (patient admission and discharge on the same day) is counted as 1 day in the summation of total days of care. For patients admitted and discharged on different days, the number of days of care is computed by counting all days from (and including) the date of admission to (but not including) the date of discharge.

*Rate of days of care*—The ratio of the number of days of care accumulated during a year to the number of persons in the civilian population on July 1 of that year.

*Average length of stay*—The number of days of care accumulated by patients discharged during the year divided by the number of these patients.

### Terms relating to diagnoses

*Diagnosis*—A disease or injury (or factor that influences health status and contact with health services that is not itself a current illness or injury) on the medical record of a patient. (See "Medical coding and edit" in the "Data

collection and processing" section of appendix I for further detail.)

*Principal diagnosis*—The condition established after study to be chiefly responsible for occasioning the admission of the patient to the hospital for care.

*First-listed diagnosis*—The coded diagnosis identified as the principal diagnosis or listed first on the face sheet or discharge summary of the medical record if the principal diagnosis cannot be identified. The number of first-listed diagnoses is equivalent to the number of discharges.

*All-listed diagnoses*—The number of diagnoses on the face sheet of the medical record. In the NHDS a maximum of seven diagnoses are coded.

### Terms relating to procedures

*Procedure*—A surgical or nonsurgical operation, diagnostic procedure, or special treatment reported on the medical record of a patient. (See "Medical coding and edit" in the "Data collection and processing" section of appendix I for further details.) The following ICD-9-CM procedure codes are not used in the NHDS:

08.19, 16.21, 18.01, 18.11, 18.19, 21.21, 21.29, 22.19, 24.19, 25.09, 25.91, 26.19, 27.29, 27.91, 29.19, 31.48–31.49, 37.29, 41.38–41.39, 42.29, 44.19, 45.19, 45.28–45.29, 48.23, 48.29, 49.21, 49.29, 49.41, 58.29, 61.19, 64.19, 64.91, 64.94, 69.92, 70.21, 73.91–73.92, 75.35, 85.19, 86.19, 86.92, 87.09–87.12, 87.16–87.17, 87.22–87.29, 87.36–87.37, 87.39, 87.43–87.49, 87.69, 87.79, 87.85–87.89, 87.92, 87.95–87.99, 88.09, 88.16–88.31, 88.33, 88.35, 88.37, 88.39, 89.01–89.13, 89.15–89.16, 89.26–89.31, 89.33–89.39, 89.45–89.53, 89.55–89.59, 89.66, 89.7, 90.01–91.99, 93.01–93.25, 93.27–93.28, 93.31–93.39, 93.42–93.44, 93.61–93.91, 93.94, 93.96, 93.99–94.23, 94.25, 94.29–95.03, 95.05–95.11, 95.14–95.15, 95.31–95.49, 96.09–96.19, 96.26–96.28, 96.34–97.04, 97.14–97.69, 97.72–97.89, 99.02–99.24, 99.26–99.59, 99.71–99.79, 99.82–99.99.

*All-listed procedures*—The number of procedures on the face sheet of the medical record. In the NHDS a maximum of four procedures are coded.

*Rate of procedures*—The ratio of the number of procedures during a year to the number of persons in the civilian population on July 1 of that year determines the rate of procedures.

## Demographic terms

*Population*—The U.S. resident population excluding members of the Armed Forces.

*Age*—Patient's age at birthday prior to admission to the hospital.

*Geographic region*—Hospitals are classified by location in one of the four geographic regions of the United States that correspond to those used by the U.S. Bureau of the Census.

### *Region*

### *States included*

Northeast

Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, and Pennsylvania

Midwest

Michigan, Ohio, Illinois, Indiana, Wisconsin, Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska, and Kansas

### *Region*

### *States included—Con.*

South

Delaware, Maryland, District of Columbia, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Kentucky, Tennessee, Alabama, Mississippi, Arkansas, Louisiana, Oklahoma, and Texas

West

Montana, Idaho, Wyoming, Colorado, New Mexico, Arizona, Utah, Nevada, Washington, Oregon, California, Hawaii, and Alaska

## Appendix III

# ICD-9-CM codes for the 1988 National Hospital Discharge Survey

Coding of the diagnostic and procedure data in the National Hospital Discharge Survey is based on the *International Classification of Diseases, 9th Revision, Clinical Modification*, or ICD-9-CM (11). This appendix presents a list of all diagnostic and procedure codes for which data were received by the National Hospital Discharge Survey (NHDS) for 1988. Part A shows the classification of diseases and injuries and supplementary classifications and is to be used with tables 1-3. Part B includes the codes for surgical, nonsurgical, and diagnostic procedures

and is to be used with table 4. It is important to consult the appropriate volume of ICD-9-CM for more detailed information about the coding scheme, such as the specific terms included in or excluded from a particular code.

The following abbreviations are used in the list of codes: N.E.C. (not elsewhere classified) and N.O.S. (not otherwise specified). Codes added to the ICD-9-CM on October 1, 1988, are preceded by a slash (/) and codes changed at that time are referenced with a slash between the old and new ICD-9-CM descriptions.

## PART A. CLASSIFICATION OF DISEASES AND INJURIES AND SUPPLEMENTARY CLASSIFICATION

001-139	INFECTIOUS AND PARASITIC DISEASES	.0	TUBERCULOSIS OF LUNG, INFILTRATIVE
001	CHOLERA	.00	TUBERCULOSIS OF LUNG, INFILTRATIVE, UNSPECIFIED EXAMINATION
.0	CHOLERA DUE TO VIBRID CHOLERA	.02	TUBERCULOSIS OF LUNG, INFILTRATIVE, BACTERIOLOGICAL OR HISTOLOGICAL EXAMINATION RESULTS UNKNOWN (AT PRESENT)
.9	CHOLERA, UNSPECIFIED	.03	TUBERCULOSIS OF LUNG, INFILTRATIVE, TUBERCLE BACILLI FOUND (IN SPUTUM) BY MICROSCOPY
002	TYPHOID AND PARATYPHOID FEVERS	.04	TUBERCULOSIS OF LUNG, INFILTRATIVE, TUBERCLE BACILLI NOT FOUND (IN SPUTUM) BY MICROSCOPY, BUT FOUND BY BACTERIAL CULTURE
.0	TYPHOID FEVER	.06	TUBERCULOSIS OF LUNG, INFILTRATIVE, TUBERCLE BACILLI NOT FOUND BY BACTERIOLOGICAL OR HISTOLOGICAL EXAMINATION, BUT TUBERCULOSIS CONFIRMED BY OTHER METHODS (INOCULATION OF ANIMALS)
003	OTHER SALMONELLA INFECTIONS	.2	TUBERCULOSIS OF LUNG WITH CAVITATION
.0	SALMONELLA GASTROENTERITIS	.20	TUBERCULOSIS OF LUNG WITH CAVITATION, UNSPECIFIED EXAMINATION
.1	SALMONELLA SEPTICEMIA	.23	TUBERCULOSIS OF LUNG WITH CAVITATION, TUBERCLE BACILLI FOUND (IN SPUTUM) BY MICROSCOPY
.2	LOCALIZED SALMONELLA INFECTIONS	.24	TUBERCULOSIS OF LUNG WITH CAVITATION, TUBERCLE BACILLI NOT FOUND (IN SPUTUM) BY MICROSCOPY, BUT FOUND BY BACTERIAL CULTURE
.24	SALMONELLA OSTEOMYELITIS	.25	TUBERCULOSIS OF LUNG WITH CAVITATION, TUBERCLE BACILLI NOT FOUND BY BACTERIOLOGICAL EXAMINATION, BUT TUBERCULOSIS CONFIRMED HISTOLOGICALLY
.29	OTHER LOCALIZED SALMONELLA INFECTIONS	.26	TUBERCULOSIS OF LUNG WITH CAVITATION, TUBERCLE BACILLI NOT FOUND BY BACTERIOLOGICAL OR HISTOLOGICAL EXAMINATION, BUT TUBERCULOSIS CONFIRMED BY OTHER METHODS (INOCULATION OF ANIMALS)
.8	OTHER SPECIFIED SALMONELLA INFECTIONS	.3	TUBERCULOSIS OF BRONCHUS
.9	SALMONELLA INFECTION, UNSPECIFIED	.35	TUBERCULOSIS OF BRONCHUS, TUBERCLE BACILLI NOT FOUND BY BACTERIOLOGICAL EXAMINATION, BUT TUBERCULOSIS CONFIRMED HISTOLOGICALLY
004	SHIGELLOSIS	.4	TUBERCULOUS FIBROSIS OF LUNG
.0	SHIGELLA DYSENTERIAE	.40	TUBERCULOUS FIBROSIS OF LUNG, UNSPECIFIED EXAMINATION
.1	SHIGELLA FLEXNERI	.43	TUBERCULOUS FIBROSIS OF LUNG, TUBERCLE BACILLI FOUND (IN SPUTUM) BY MICROSCOPY
.2	SHIGELLA BOYDII	.45	TUBERCULOUS FIBROSIS OF LUNG, TUBERCLE BACILLI NOT FOUND BY BACTERIOLOGICAL EXAMINATION, BUT TUBERCULOSIS CONFIRMED HISTOLOGICALLY
.3	SHIGELLA SONNEI	.46	TUBERCULOUS FIBROSIS OF LUNG, TUBERCLE BACILLI NOT FOUND BY BACTERIOLOGICAL OR HISTOLOGICAL EXAMINATION, BUT TUBERCULOSIS CONFIRMED BY OTHER METHODS (INOCULATION OF ANIMALS)
.8	OTHER SPECIFIED SHIGELLA INFECTIONS	.5	TUBERCULOUS BRONCHIECTASIS
.9	SHIGELLOSIS, UNSPECIFIED	.50	TUBERCULOUS BRONCHIECTASIS, UNSPECIFIED EXAMINATION
005	OTHER FOOD POISONING (BACTERIAL)	.6	TUBERCULOUS PNEUMONIA (ANY FORM)
.0	STAPHYLOCOCCAL FOOD POISONING	.60	TUBERCULOUS PNEUMONIA (ANY FORM), UNSPECIFIED EXAMINATION
.1	BUTULISM	.63	TUBERCULOUS PNEUMONIA (ANY FORM), TUBERCLE BACILLI FOUND (IN SPUTUM) BY MICROSCOPY
.3	FOOD POISONING DUE TO OTHER CLOSTRIDIA	.66	TUBERCULOUS PNEUMONIA (ANY FORM), TUBERCLE BACILLI NOT FOUND BY BACTERIOLOGICAL OR HISTOLOGICAL EXAMINATION, BUT TUBERCULOSIS CONFIRMED BY OTHER METHODS (INOCULATION OF ANIMALS)
.8	OTHER BACTERIAL FOOD POISONING	.8	OTHER SPECIFIED PULMONARY TUBERCULOSIS

	COMPLICATION				
.1	OPEN WOUND OF FOOT EXCEPT TOE(S) ALONE, COMPLICATED		.9		INJURY TO UNSPECIFIED BLOOD VESSEL OF ABDOMEN AND PELVIS
.2	OPEN WOUND OF FOOT EXCEPT TOE(S) ALONE, WITH TENDON INVOLVEMENT		903		INJURY TO BLOOD VESSELS OF UPPER EXTREMITY
893	OPEN WOUND OF TOE(S)		.0		INJURY TO AXILLARY BLOOD VESSELS
.0	OPEN WOUND OF TOE(S), WITHOUT MENTION OF COMPLICATION		.01		INJURY TO AXILLARY ARTERY
.1	OPEN WOUND OF TOE(S), COMPLICATED		.02		INJURY TO AXILLARY VEIN
.2	OPEN WOUND OF TOE(S), WITH TENDON INVOLVEMENT		.1		INJURY TO BRACHIAL BLOOD VESSELS
894	MULTIPLE AND UNSPECIFIED OPEN WOUND OF LOWER LIMB		.2		INJURY TO RADIAL BLOOD VESSELS
.0	MULTIPLE AND UNSPECIFIED OPEN WOUND OF LOWER LIMB, WITHOUT MENTION OF COMPLICATION		.3		INJURY TO ULNAR BLOOD VESSELS
.1	MULTIPLE AND UNSPECIFIED OPEN WOUND OF LOWER LIMB, COMPLICATED		.4		INJURY TO PALMAR ARTERY
.2	MULTIPLE AND UNSPECIFIED OPEN WOUND OF LOWER LIMB, WITH TENDON INVOLVEMENT		.5		INJURY TO DIGITAL BLOOD VESSELS
895	TRAUMATIC AMPUTATION OF TOE(S) (COMPLETE) (PARTIAL)		.8		INJURY TO OTHER SPECIFIED BLOOD VESSELS OF UPPER EXTREMITY
.0	TRAUMATIC AMPUTATION OF TOE(S) (COMPLETE) (PARTIAL), WITHOUT MENTION OF COMPLICATION		.9		INJURY TO UNSPECIFIED BLOOD VESSEL OF UPPER EXTREMITY
.1	TRAUMATIC AMPUTATION OF TOE(S) (COMPLETE) (PARTIAL), COMPLICATED		904		INJURY TO BLOOD VESSELS OF LOWER EXTREMITY AND UNSPECIFIED SITES
897	TRAUMATIC AMPUTATION OF LEG(S) (COMPLETE) (PARTIAL)		.0		INJURY TO COMMON FEMORAL ARTERY
.0	TRAUMATIC AMPUTATION OF LEG(S) (COMPLETE) (PARTIAL), UNILATERAL, BELOW KNEE, WITHOUT MENTION OF COMPLICATION		.1		INJURY TO SUPERFICIAL FEMORAL ARTERY
.1	TRAUMATIC AMPUTATION OF LEG(S) (COMPLETE) (PARTIAL), UNILATERAL, BELOW KNEE, COMPLICATED		.2		INJURY TO FEMORAL VEINS
.2	TRAUMATIC AMPUTATION OF LEG(S) (COMPLETE) (PARTIAL), UNILATERAL, AT OR ABOVE KNEE, WITHOUT MENTION OF COMPLICATION		.3		INJURY TO SAPHENOUS VEINS
.3	TRAUMATIC AMPUTATION OF LEG(S) (COMPLETE) (PARTIAL), UNILATERAL, AT OR ABOVE KNEE, COMPLICATED		.4		INJURY TO POPLITEAL BLOOD VESSELS
.6	TRAUMATIC AMPUTATION OF LEG(S) (COMPLETE) (PARTIAL), BILATERAL (ANY LEVEL), WITHOUT MENTION OF COMPLICATION		.41		INJURY TO POPLITEAL ARTERY
.7	TRAUMATIC AMPUTATION OF LEG(S) (COMPLETE) (PARTIAL), BILATERAL (ANY LEVEL), COMPLICATED		.42		INJURY TO POPLITEAL VEIN
900	INJURY TO BLOOD VESSELS OF HEAD AND NECK		.5		INJURY TO TIBIAL BLOOD VESSELS
.0	INJURY TO CAROTID ARTERY		.51		INJURY TO ANTERIOR TIBIAL ARTERY
.01	INJURY TO COMMON CAROTID ARTERY		.53		INJURY TO POSTERIOR TIBIAL ARTERY
.03	INJURY TO INTERNAL CAROTID ARTERY		.54		INJURY TO POSTERIOR TIBIAL VEIN
.1	INJURY TO INTERNAL JUGULAR VEIN		.7		INJURY TO OTHER SPECIFIED BLOOD VESSELS OF LOWER EXTREMITY
.8	INJURY TO OTHER SPECIFIED BLOOD VESSELS OF HEAD AND NECK		.8		INJURY TO UNSPECIFIED BLOOD VESSEL OF LOWER EXTREMITY
.81	INJURY TO EXTERNAL JUGULAR VEIN		.9		INJURY TO BLOOD VESSELS OF UNSPECIFIED SITE
.82	INJURY TO MULTIPLE BLOOD VESSELS OF HEAD AND NECK		905		LATE EFFECTS OF MUSCULOSKELETAL AND CONNECTIVE TISSUE INJURIES
.89	INJURY TO OTHER SPECIFIED BLOOD VESSELS OF HEAD AND NECK		.0		LATE EFFECT OF FRACTURE OF SKULL AND FACE BONES
.9	INJURY TO UNSPECIFIED BLOOD VESSEL OF HEAD AND NECK		.1		LATE EFFECT OF FRACTURE OF SPINE AND TRUNK WITHOUT MENTION OF SPINAL CORD LESION
901	INJURY TO BLOOD VESSELS OF THORAX		.2		LATE EFFECT OF FRACTURE OF UPPER EXTREMITIES
.0	INJURY TO THORACIC AORTA		.3		LATE EFFECT OF FRACTURE OF NECK OF FEMUR
.1	INJURY TO INNOMINATE AND SUBCLAVIAN ARTERIES		.4		LATE EFFECT OF FRACTURE OF LOWER EXTREMITIES
.2	INJURY TO SUPERIOR VENA CAVA		.5		LATE EFFECT OF FRACTURE OF MULTIPLE AND UNSPECIFIED BONES
.3	INJURY TO INNOMINATE AND SUBCLAVIAN VEINS		.6		LATE EFFECT OF DISLOCATION
.8	INJURY TO OTHER SPECIFIED BLOOD VESSELS OF THORAX		.7		LATE EFFECT OF SPRAIN AND STRAIN WITHOUT MENTION OF TENDON INJURY
.81	INJURY TO INTERCOSTAL ARTERY OR VEIN		.8		LATE EFFECT OF TENDON INJURY
.82	INJURY TO INTERNAL MAMMARY ARTERY OR VEIN		.9		LATE EFFECT OF TRAUMATIC AMPUTATION
.89	INJURY TO OTHER SPECIFIED BLOOD VESSELS OF THORAX		906		LATE EFFECTS OF INJURIES TO SKIN AND SUBCUTANEOUS TISSUES
902	INJURY TO BLOOD VESSELS OF ABDOMEN AND PELVIS		.0		LATE EFFECT OF OPEN WOUND OF HEAD, NECK, AND TRUNK
.0	INJURY TO ABDOMINAL AORTA		.1		LATE EFFECT OF OPEN WOUND OF EXTREMITIES WITHOUT MENTION OF TENDON INJURY
.1	INJURY TO INFERIOR VENA CAVA		.2		LATE EFFECT OF SUPERFICIAL INJURY
.10	INJURY TO INFERIOR VENA CAVA, UNSPECIFIED		.3		LATE EFFECT OF CONTUSION
.11	INJURY TO HEPATIC VEINS		.4		LATE EFFECT OF CRUSHING
.19	INJURY TO OTHER SPECIFIED BRANCHES OF INFERIOR VENA CAVA		.5		LATE EFFECT OF BURN OF EYE, FACE, HEAD, AND NECK
.2	INJURY TO CELIAC AND MESENTERIC ARTERIES		.6		LATE EFFECT OF BURN OF WRIST AND HAND
.20	INJURY TO CELIAC AND MESENTERIC ARTERIES, UNSPECIFIED		.7		LATE EFFECT OF BURN OF OTHER EXTREMITIES
.21	INJURY TO GASTRIC ARTERY		.8		LATE EFFECT OF BURNS OF OTHER SPECIFIED SITES
.24	INJURY TO OTHER SPECIFIED BRANCHES OF CELIAC AXIS		907		LATE EFFECTS OF INJURIES TO THE NERVOUS SYSTEM
.26	INJURY TO PRIMARY BRANCHES OF SUPERIOR MESENTERIC ARTERY		.0		LATE EFFECT OF INTRACRANIAL INJURY WITHOUT MENTION OF SKULL FRACTURE
.29	INJURY TO OTHER CELIAC AND MESENTERIC ARTERIES		.1		LATE EFFECT OF INJURY TO CRANIAL NERVE
.3	INJURY TO PORTAL AND SPLENIC VEINS		.2		LATE EFFECT OF SPINAL CORD INJURY
.31	INJURY TO SUPERIOR MESENTERIC VEIN AND PRIMARY SUBDIVISIONS		.3		LATE EFFECT OF INJURY TO NERVE ROOT(S), SPINAL PLEXUS(ES), AND OTHER NERVES OF TRUNK
.33	INJURY TO PORTAL VEIN		.4		LATE EFFECT OF INJURY TO PERIPHERAL NERVE OF SHOULDER GIRDLE AND UPPER LIMB
.34	INJURY TO SPLENIC VEIN		.5		LATE EFFECT OF INJURY TO PERIPHERAL NERVE OF PELVIC GIRDLE AND LOWER LIMB
.39	INJURY TO OTHER PORTAL AND SPLENIC VEINS		908		LATE EFFECTS OF OTHER AND UNSPECIFIED INJURIES
.5	INJURY TO ILIAC BLOOD VESSELS		.0		LATE EFFECT OF INTERNAL INJURY TO CHEST
.53	INJURY TO ILIAC ARTERY		.1		LATE EFFECT OF INTERNAL INJURY TO INTRA-ABDOMINAL ORGANS
.54	INJURY TO ILIAC VEIN		.2		LATE EFFECT OF INTERNAL INJURY TO OTHER INTERNAL ORGANS
.8	INJURY TO OTHER SPECIFIED BLOOD VESSELS OF ABDOMEN AND PELVIS		.3		LATE EFFECT OF INJURY TO BLOOD VESSEL OF HEAD, NECK, AND EXTREMITIES
.87	INJURY TO MULTIPLE BLOOD VESSELS OF ABDOMEN AND PELVIS		.4		LATE EFFECT OF INJURY TO BLOOD VESSEL OF THORAX, ABDOMEN, AND PELVIS
.89	INJURY TO OTHER SPECIFIED BLOOD VESSELS OF ABDOMEN AND PELVIS		.5		LATE EFFECT OF FOREIGN BODY IN ORIFICE
			.6		LATE EFFECT OF CERTAIN COMPLICATIONS OF TRAUMA
			.9		LATE EFFECT OF UNSPECIFIED INJURY

909	LATE EFFECTS OF OTHER AND UNSPECIFIED EXTERNAL CAUSES		
•0	LATE EFFECT OF POISONING DUE TO DRUG, MEDICINAL OR BIOLOGICAL SUBSTANCE	•9	LEG, AND ANKLE, WITHOUT MENTION OF INFECTION
•2	LATE EFFECT OF RADIATION		OTHER AND UNSPECIFIED SUPERFICIAL INJURY OF HIP, THIGH, LEG, AND ANKLE, INFECTED
•3	LATE EFFECT OF COMPLICATIONS OF SURGICAL AND MEDICAL CARE	917	SUPERFICIAL INJURY OF FOOT AND TOE(S)
910	SUPERFICIAL INJURY OF FACE, NECK, AND SCALP EXCEPT EYE	•0	ABRASION OR FRICTION BURN OF FOOT AND TOE(S), WITHOUT MENTION OF INFECTION
•0	ABRASION OR FRICTION BURN OF FACE, NECK, AND SCALP EXCEPT EYE, WITHOUT MENTION OF INFECTION	•1	ABRASION OR FRICTION BURN OF FOOT AND TOE(S), INFECTED
•1	ABRASION OR FRICTION BURN OF FACE, NECK, AND SCALP EXCEPT EYE, INFECTED	•2	BLISTER OF FOOT AND TOE(S), WITHOUT MENTION OF INFECTION

 SUBSTANCE  
 .15 PARENTERAL INFUSION OF THERAPEUTIC OR PROPHYLACTIC SUBSTANCE  
 .2 INJECTION OR INFUSION OF OTHER THERAPEUTIC OR  
 PROPHYLACTIC SUBSTANCE  
 .25 INJECTION OR INFUSION OF CANCER CHEMOTHERAPEUTIC  
 SUBSTANCE  
 .6 CONVERSION OF CARDIAC RHYTHM  
 .60 CARDIOPULMONARY RESUSCITATION, NOT OTHERWISE SPECIFIED  
 .61 ATRIAL CARADIOVERSION  
 .62 OTHER ELECTRIC COUNTERSHOCK OF HEART  
 .63 CLOSED CHEST CARDIAC MASSAGE  
 .64 CAROTID SINUS STIMULATION  
 .69 OTHER CONVERSION OF CARDIAC RHYTHM  
 .7 / THERAPEUTIC APHERESIS  
 .71 / THERAPEUTIC PLASMAPHERESIS

.8 MISCELLANEOUS PHYSICAL PROCEDURES  
 .81 HYPOTHERMIA [CENTRAL] [LOCAL]  
 .83 OTHER PHOTOTHERAPY  
 .85 HYPERTHERMIA FOR TREATMENT OF CANCER  
 .86 NON-INVASIVE PLACEMENT OF BONE GROWTH STIMULATOR

# Appendix IV

## Conversion table of changes in ICD-9-CM codes

Although the *International Classification of Diseases, 9th Revision, Clinical Modification* has been used for coding NHDS data since 1979, the classification undergoes annual updating. Assignment of new diagnostic and procedure codes, fourth and fifth digit expansion of codes, as well as code deletions, are contained in addenda developed by the ICD-9-CM Coordination and Maintenance Committee and approved by the Director of NCHS and the Administrator of the Health Care Financing Administration. Addenda to the ICD-9-CM become effective October 1 of the affected year and have been released for 1986, 1987, and 1988.

As described earlier, the 1988 NHDS involved two data collection modes: manual and abstract. All data collected manually were coded using the third edition of the ICD-9-CM, which includes the addenda for 1986, 1987, and 1988. Data collected via abstract service were coded using two different ICD-9-CM revisions. For the first 9 months of 1988, the ICD-9-CM including the addenda of October 1, 1986-87 was used. For the last 3 months of 1988, the ICD-9-CM including the addenda of October 1, 1986-88 was used. Therefore, the reader is cautioned that annual estimates for new ICD-9-CM codes are underestimated for 1988 and that it is necessary to note both the old and new descriptions for codes that were changed.

The following conversion table shows the new ICD-9-CM codes, the date they were introduced, and the code to which the diagnosis or procedure had been assigned prior to the development of the new code.

<i>Diagnosis codes</i>		
<i>Current code(s) assignment</i>	<i>Effective October 1</i>	<i>Previous code(s) assignment</i>
042.0-042.9 . . . . .	1986	279.19
043.0-043.9 . . . . .	1986	279.19
044.0-044.9 . . . . .	1986	279.19
518.81 . . . . .	1987	799.1
518.82-518.89 . . . . .	1987	518.8
764.00-764.09 . . . . .	1988	764.0
764.10-764.19 . . . . .	1988	764.1
764.20-764.29 . . . . .	1988	764.2
764.90-764.99 . . . . .	1988	764.9
765.00-765.09 . . . . .	1988	765.0
765.10-765.19 . . . . .	1988	765.1
795.8 . . . . .	1986	795.7
996.51-996.59 . . . . .	1987	996.5
996.80-996.89 . . . . .	1987	996.8

<i>Procedure codes</i>		
<i>Current code(s) assignment</i>	<i>Effective October 1</i>	<i>Previous code(s) assignment</i>
03.90 . . . . .	1987	03.99 (Insertion of catheter)
20.96-20.98 . . . . .	1986	20.95

96.6 . . . . .	1986	96.35
99.15 . . . . .	1986	99.29
99.71–99.79 . . . . .	1988	99.07
99.85 . . . . .	1987	93.35
99.86 . . . . .	1987	93.39
99.88 . . . . .	1988	99.83

Certain codes either have been deleted or have had their contents transferred elsewhere as a result of the October 1986, October 1987, and October 1988 revisions. The codes are listed below with their current status indicated.

Formerly included code(s)	Status	Effective October 1	Contents of code(s) currently in:
518.8 . . . . .	Expanded	1987	518.82–518.89
764.0 . . . . .	Expanded	1988	764.00–764.09
764.1 . . . . .	Expanded	1988	764.10–764.19
764.2 . . . . .	Expanded	1988	764.20–764.29
764.9 . . . . .	Expanded	1988	764.90–764.99
765.0 . . . . .	Expanded	1988	765.00–765.09
765.1 . . . . .	Expanded	1988	765.10–765.19
996.5 . . . . .	Expanded	1987	996.51–996.59
996.8 . . . . .	Expanded	1987	996.80–996.89
36.0 . . . . .	Expanded	1986	36.01–36.09
36.01 . . . . .	Expanded	1987	36.01, 36.05
37.83–37.84 . . . . .	Combined	1987	37.77
41.0 . . . . .	Expanded	1988	41.00–41.03
44.2 . . . . .	Expanded	1986	44.21–44.29
48.66 . . . . .	Deleted	1988	45.75
78.90–78.99 <sup>1</sup> . . . . .	Transferred	1987	78.40–78.49
80.5 . . . . .	Expanded	1986	80.50–80.59
99.71–99.79 <sup>2</sup> . . . . .	Deleted	1987	Eliminated

<sup>1</sup>Codes 78.90–78.99 were retitled as "Insertion of bone growth stimulator" in October 1987; the previous contents of codes 78.90–78.99 were reassigned to codes 78.40–78.49.

<sup>2</sup>Codes 99.71–99.79 were deleted in October 1987; their contents were not transferred elsewhere. In the October 1988 revision, codes 99.71–99.79 were reclassified as "Therapeutic apheresis."

# Vital and Health Statistics series descriptions

- SERIES 1. **Programs and Collection Procedures**—Reports describing the general programs of the National Center for Health Statistics and its offices and divisions and the data collection methods used. They also include definitions and other material necessary for understanding the data.
- SERIES 2. **Data Evaluation and Methods Research**—Studies of new statistical methodology including experimental tests of new survey methods, studies of vital statistics collection methods, new analytical techniques, objective evaluations of reliability of collected data, and contributions to statistical theory. Studies also include comparison of U.S. methodology with those of other countries.
- SERIES 3. **Analytical and Epidemiological Studies**—Reports presenting analytical or interpretive studies based on vital and health statistics, carrying the analysis further than the expository types of reports in the other series.
- SERIES 4. **Documents and Committee Reports**—Final reports of major committees concerned with vital and health statistics and documents such as recommended model vital registration laws and revised birth and death certificates.
- SERIES 5. **Comparative International Vital and Health Statistics Reports**—Analytical and descriptive reports comparing U.S. vital and health statistics with those of other countries.
- SERIES 6. **Cognition and Survey Measurement**—Reports from the National Laboratory for Collaborative Research in Cognition and Survey Measurement using methods of cognitive science to design, evaluate, and test survey instruments.
- SERIES 10. **Data From the National Health Interview Survey**—Statistics on illness, accidental injuries, disability, use of hospital, medical, dental, and other services, and other health-related topics, all based on data collected in the continuing national household interview survey.
- SERIES 11. **Data From the National Health Examination Survey and the National Health and Nutrition Examination Survey**—Data from direct examination, testing, and measurement of national samples of the civilian noninstitutionalized population provide the basis for (1) estimates of the medically defined prevalence of specific diseases in the United States and the distributions of the population with respect to physical, physiological, and psychological characteristics and (2) analysis of relationships among the various measurements without reference to an explicit finite universe of persons.
- SERIES 12. **Data From the Institutionalized Population Surveys**—Discontinued in 1975. Reports from these surveys are included in Series 13.
- SERIES 13. **Data on Health Resources Utilization**—Statistics on the utilization of health manpower and facilities providing long-term care, ambulatory care, hospital care, and family planning services.
- SERIES 14. **Data on Health Resources: Manpower and Facilities**—Statistics on the numbers, geographic distribution, and characteristics of health resources including physicians, dentists, nurses, other health occupations, hospitals, nursing homes, and outpatient facilities.
- SERIES 15. **Data From Special Surveys**—Statistics on health and health-related topics collected in special surveys that are not a part of the continuing data systems of the National Center for Health Statistics.
- SERIES 16. **Compilations of Advance Data From Vital and Health Statistics**—These reports provide early release of data from the National Center for Health Statistics' health and demographic surveys. Many of these releases are followed by detailed reports in the Vital and Health Statistics series.
- SERIES 20. **Data on Mortality**—Various statistics on mortality other than those included in regular annual or monthly reports. Special analyses by cause of death, age, and other demographic variables; geographic and time series analyses; and statistics on characteristics of deaths not available from the vital records based on sample surveys of those records.
- SERIES 21. **Data on Natality, Marriage, and Divorce**—Various statistics on natality, marriage, and divorce other than those included in regular annual or monthly reports. Special analyses by demographic variables; geographic and time series analyses; studies of fertility; and statistics on characteristics of births not available from the vital records based on sample surveys of those records.
- SERIES 22. **Data From the National Mortality and Natality Surveys**—Discontinued in 1975. Reports from these sample surveys based on vital records are included in Series 20 and 21, respectively.
- SERIES 23. **Data From the National Survey of Family Growth**—Statistics on fertility, family formation and dissolution, family planning, and related maternal and infant health topics derived from a periodic survey of a nationwide probability sample of women 15–44 years of age.
- SERIES 24. **Compilations of Data on Natality, Mortality, Marriage, Divorce, and Induced Terminations of Pregnancy**—Advance reports of births, deaths, marriages, and divorces are based on final data from the National Vital Statistics System and are published annually as supplements to the Monthly Vital Statistics Report (MVSr). These reports are followed by the publication of detailed data in Vital Statistics of the United States annual volumes. Other reports including induced terminations of pregnancy issued periodically as supplements to the MVSr provide selected findings based on data from the National Vital Statistics System and may be followed by detailed reports in the Vital and Health Statistics series.
