The National Center for Education Statistics (NCES) is the primary federal entity for collecting, analyzing, and reporting data related to education in the United States and other nations. It fulfills a congressional mandate to collect, collate, analyze, and report full and complete statistics on the condition of education in the United States; conduct and publish reports and specialized analyses of the meaning and significance of such statistics; assist state and local education agencies in improving their statistical systems; and review and report on education activities in foreign countries.

NCES activities are designed to address high priority education data needs; provide consistent, reliable, complete, and accurate indicators of education status and trends; and report timely, useful, and high quality data to the U.S. Department of Education, the Congress, the states, other education policymakers, practitioners, data users, and the general public.

We strive to make our products available in a variety of formats and in language that is appropriate to a variety of audiences. You, as our customer, are the best judge of our success in communicating information effectively. If you have any comments or suggestions about this or any other NCES product or report, we would like to hear from you. Please direct your comments to:

INTRODUCTION

The 1999 National Household Education Survey (NHES:1999) was a random digit dial (RDD) telephone survey of households in the United States developed by the National Center for Education Statistics (NCES) and conducted by Westat. The NHES:1999 was a compilation of key items from previous NHES survey years, and included three interviews:

- The Parent Interview, in which data were collected on a variety of topics including early childhood program participation, types and frequency of family involvement in children's schooling, school practices to involve and support families, learning activities with children outside of school, and plans for their children's postsecondary education;
- The Youth Interview, in which children in 6th through 12th grades, whose parents had completed a Parent Interview, were asked about school and family environments, civic involvement and community service, and plans for postsecondary education; and
- The Adult Education Interview, in which data, such as type of program, employer support, and degree sought, were collected on characteristics of participation in six types of adult educational activities, including English as a second language, adult basic education, credential programs, apprenticeships, work-related courses, and personal development courses.

There were three populations of interest for the NHES:1999:

- Children birth through grade 12, whose parents completed the Parent Interview, which was structured according to the age and grade of their children;
- Students in grades 6 through 12, who completed the Youth Interview; and
- Adults, defined as persons 16 years old or older, not enrolled in grade 12 or below, and not on active duty in the military, whose responses to the Adult Education Interview provided estimates representative of all civilian U.S. adults.

The NHES:1999 Screener enumerated household members and collected demographic and educational information to determine eligibility for extended interviews. Data were collected from January through April 1999.

This manual, the *NHES:1999 Data File User's Manual, Volume III -Youth Interview Data File*, provides documentation and guidance for users of the public release data file for the Youth Interview of the 1999 National Household Education Survey (NHES:1999). This volume contains a description of the data file and a discussion of data considerations and anomalies. Included as appendixes are the public file layout, SAS code for creating derived variables, crosswalks of items asked in the 1999 Youth Interview and the NHES:1996 Youth Civic Involvement Interview, the codebook for the Youth Interview public data file, and directions and code for linking data files. The youth service activity coding manual is also included.

Volume III is meant to be read in conjunction with the *NHES:1999 Data File User's Manual, Volume I*. More information about the purpose of the study, the sample design, the other survey components, the data collection instruments, and data collection and data processing procedures is contained in the *NHES:1999 Data File User's Manual, Volume I*. Information about the Parent Interview public data file and the Adult Education Interview public data file can be found in Volumes II and IV of the manual, respectively.

This page is intentionally blank.

6. GUIDE TO THE DATA FILE AND CODEBOOK

6.1 Content and Organization of the Data File

This section describes the content of the public release data file constructed for the NHES:1999 Youth Interview. This file contains data from all completed Youth Interviews. There is one record for each Youth Interview completed, and the file contains 7,913 cases. The file is organized so that logically related sets of variables are grouped together. The data items are listed in the file in the following order: system variables, household membership variables, questionnaire item variables, household characteristics variables, derived variables, weighting and variance estimation variables, and imputation flag variables.

A list of all the variables in the data file is shown in appendix C. The VARIABLE NAME column displays the unique identifier for each variable in the data file. The VARIABLE LABEL column displays a short description associated with the variable. The FORMAT column indicates if a variable has a numeric ("N") or a character ("C") format. All of the variables except PATH, GRADE, GRADEEQ, ALLGRADE, SLOW, and SHIGH in the Youth Interview file have numeric formats. The LENGTH column indicates the columns of data the variable takes up on the data file. The length descriptor also includes the number of digits found after the decimal point for noninteger numeric variables (e.g., weight variables). The position of the variable is indicated in the START and END column and indicates the position in the file where the variable begins and ends.

The value "-1" for any variable on the file indicates that a case was part of a legitimate skip. For example, if a youth did not participate in a community service activity, the following questions about the frequency and duration of the activities would equal -1; these questions would not have been asked because the youth reported no community service activity in the first place.

The NHES:1999 data files are provided on CD-ROM and are accessible through an Electronic CodeBook (ECB) that allows data users to view variable frequencies, tag variables for extraction, and create the SAS, SPSS for Windows, or STATA code needed to create an extract file for analysis purposes. The ECB contains all NHES:1999 data sets: the Parent Interview file, the Youth Interview file, and the Adult Education Interview file. Instructions for using the CD-ROM and ECB are provided in a separate document, the *National Household Education Survey Electronic CodeBook User's Guide* (Nolin et al., 2000). The sections that follow describe the contents of the Youth Interview data file.

6.1.1 System Variables

System variables are created during the conduct of an interview and are instrumental in the successful administration of the interview. Their creation is transparent to the interviewer and to the respondent. System variables fall into two categories: linking variables (record identifiers or ID numbers) and interview status variables. Linking variables are record identifiers that provide a link to other interviews completed in the same household. (See appendix G for more information about linking between files.) Status variables are set at the completion of each interview to define completion status. There was only one status for completed youth interviews, so no status variable is on this data file.

BASMD is the unique 12-digit identifier variable for the interview. It is composed of the eight-digit household identifier, the two-digit household member person number of the subject of the interview, and the two-digit number, 02, that indicates that the interview was a Youth Interview.

ENUMID is the 10-digit identifier variable for the subject of the interview. It is composed of the eight-digit household identifier and the two-digit household member person number of the subject of the interview. ENUMID can be used to link the Youth Interview to the Parent Interview about that youth and to an Adult Education Interview administered to a Parent Interview respondent. See appendix G for instructions for linking the NHES:1999 Interviews.

BASEID is the eight-digit identifier for the household. This ID number forms the first eight digits of ID numbers for other interviews in the household, providing a means of linking interviews within the same household. See appendix G for instructions.

ENGLSPAN is the variable that indicates whether the interview was conducted in English or in Spanish.

The values for ENGLSPAN are:

- 1 = Interview was conducted in English
- 2 = Interview was conducted in Spanish

PATH is the variable that designates classes of cases based on certain characteristics (e.g., age or grade) that follow the same skip pattern within the interview. For the Youth Interview, there are three paths:

- H = Home schooled youth
- M = Middle school students (grades 6–8)
- S = High school students (grades 9–12)

6.1.2 Household Membership Variables

All household members were enumerated in either the Screener or the Parent Interview. Data collected included age and sex (S6 or PA7), and relationship to the child (PA8). (Note that all variables corresponding to question numbers that start with P are on the Parent Interview File.) The gender information collected was used to drive the gender-based wording of subsequent questions throughout the extended interview.

If the respondent relationship was recorded as mother or father, an additional question (PA9 or PA10) was asked to gather the specific relationship (birth, adoptive, step, or foster), of the mother and/or father living in the household.

The household member information is stored on the public release data file in the following order: information about the subject of the interview (the sampled youth), information about the respondent to the parent interview (the most knowledgeable parent/guardian), information about the mother, and information about the father. Please note that the extended respondent information is repeated in one of two places. If the extended respondent is the mother or the father, information is contained in the respondent section and that information will be repeated in the mother or father section. If the respondent is not the mother or father, the information will be reported in the section on other household members. The variables appear on the data file as follows:

CHILDNUM is the household member person number of the sampled youth.

AGE98 is the sampled youth's age as of December 31, 1998.

SEX is the sampled youth's sex.

CRACE indicates the sampled youth's race.

COTHRACE indicates the sampled youth's race if "some other race" was reported at CRACE.

CHISPAN indicates whether the sampled youth is Hispanic.

RESPNUM is the extended interview respondent's household member person number.¹

RESPAGE is the extended interview respondent's age.

RESPSEX is the extended interview respondent's sex.

RESRELN is the extended interview respondent's relationship to the sampled youth.

MOMNUM is the household member person number of the sampled youth's mother.

MOMAGE is the mother's age.

MOMTYPE is the type of mother (birth, adoptive, step, or foster).

DADNUM is the household member person number of the sampled youth's father.

DADAGE is the father's age.

DADTYPE is the type of father (birth, adoptive, step, or foster).

6.1.3 Questionnaire Item Variables

The next variables on the Youth Interview data file capture the youth's month and year of birth, birth country, the language he or she speaks most at home, school enrollment and grade, and school characteristics. These items were asked of the parent/guardian respondent and have been copied from the Parent Interview data file to aid users. They are on the file in the order they were asked in the Parent Interview. The variables from the Youth Interview appear next on the file in the same order as they were asked. Some variables were excluded from the file for confidentiality reasons. These include the names of household members, verbatim string responses that might identify persons or places, and the individual ZIP Codes. Some of these variables are included in a separate restricted-use data file (see section 6.3 below). The Youth Interview questionnaire appears with the Screener, the Parent Interview, and the Adult Education Interview questionnaires, in Volume 1, appendix A; variable names are provided to the left of each question. Those followed by "/R" appear only on a restricted-use data file that may be obtained through a special licensing agreement with NCES. To learn more about getting a license, go to the NCES Web site at <http://nces.ed.gov/pubsearch/licenses.asp>. (A cross-reference of NHES:1999 questionnaire variables with those of previous NHES surveys is provided in appendix E.)

There are repeating series of questions in the Service Activities sections (YD and YG). Variable names and labels reflect the series in this section. For example, the SANOW1 (YD3) variable indicates

¹Each person in the household is enumerated and assigned a person number during the screening interview.

whether the youth is currently participating in the first service activity reported and the SAREG2 (YD4) variable indicates whether the youth is participating in the second service activity on a regular basis.

Several variables appear in the section on service activities which correspond to restricted items on the questionnaire. These are BCODE1-3, SPCODEA1-3, SPCODEB1-3, and SPCODEC1-3. These variables have been created to reflect the coding and categorization of youth service activities (for more information about the coding scheme and categorization of service activities, see appendix H). For each of the activities (up to three) reported by respondents sampled for additional questions on service activities, there will be a broad code (BCODE) as well as up to three specific codes (SPCODE). So, for example, the variable BCODE1 (which precedes YG2, variable SAPYMT1) will reflect the broad codes assigned to the first activities reported by respondents. This will be followed by the variables SPCODEA1, SPCODEB1, and SPCODEC1, to reflect up to three specific codes assigned to these same first activities. To take another example, the variable BCODE2 (preceding variable SAPYMT2) will show broad codes assigned to the second activities reported by respondents, followed by SPCODEA2, SPCODEB2, and SPCODEC2, to show up to three specific codes assigned to these same second activities.

6.1.4 Household Characteristics Variables

Household characteristics variables are variables that reflect characteristics of the household as a unit. These questions were asked at the end of the first Parent Interview in the household, and they have been copied on the Youth Interview file. For example, questions were asked about whether the home was owned or rented (HOWNHOME), and whether the family received food stamps in the past 12 months (HFOODST). These household items appear on the file in the same order as they were asked in the Parent Interview.

6.1.5 Derived Variables

Derived variables were developed and included in the public use data file to aid users in their analyses. The derived variables fall into three categories: questionnaire item variables, counter variables, and variables linked to other data sources. Questionnaire item-derived variables were created by combining two or more items from the questionnaire. Counter-derived variables were created by counting the number of persons enumerated in the household with specific characteristics. Linked-derived variables were created by using the respondent's ZIP Code to extract data from the 1990 Census of Population Summary Tape File 3B (STF3B).

All of the derived variables on the Youth Interview file are generated in the Parent Interview and are copied over. Not all source variables from the Parent Interview used to create the derived variables are copied to the Youth Interview. The derived variables appear together on the file in their own section in alphabetical order. They are listed below in the same order with an explanation of how they were derived. The actual SAS code to create these variables is found in appendix D, with the exception of counter variables and CENREG (Census region). All unique NHES:1999 ZIP Codes were matched to ZIP Codes on the STF3B to extract urbanicity, the percent of black or Hispanic residents, and the percent of persons under age 18 living in poverty.

ALLGRADE is a composite variable that identifies the youth enrollment status, the grade level of children in graded schools, and the grade level equivalent for children in ungraded schools, special education programs, or home school. **ALLGRADE** was created using the variables **GRADE** (PB6) and **GRADEEQ** (PB7).

The values for **ALLGRADE** are:

- 0 = Not enrolled
- N = Nursery/preschool/prekindergarten/Head Start
- K = Transitional kindergarten, kindergarten, and prefirst grade
- 1 = First grade or equivalent
- 2 = Second grade or equivalent
- 3 = Third grade or equivalent
- 4 = Fourth grade or equivalent
- 5 = Fifth grade or equivalent
- 6 = Sixth grade or equivalent
- 7 = Seventh grade or equivalent
- 8 = Eighth grade or equivalent
- 9 = Ninth grade or equivalent
- 10 = Tenth grade or equivalent
- 11 = Eleventh grade or equivalent
- 12 = Twelfth grade or equivalent
- U = Ungraded/no equivalent

ANYCARE indicates whether the youth currently participates in any nonparental care or program arrangements. **ANYCARE** is a composite variable created using the variables **RCNOW** (PF1), **NCNOW** (PG1), **HSNOW** (PH1), **CPNNOW** (PI1), and **CPSNOW** (PP1).

The values for **ANYCARE** are:

- 1 = Currently participates in any care or program arrangement
- 2 = Does not currently participate in any care or program arrangement
- 1 = High school student or home schooled

CENREG is a composite variable that identifies the Census region in which the sampled youth lives. This variable is created by grouping states. The following states and the District of Columbia are in each Census region:

- Northeast: CT, MA, ME, NH, NJ, NY, PA, RI, VT
- South: AL, AR, DC, DE, FL, GA, KY, LA, MD, MS, NC, OK, SC, TN, TX, VA, WV
- Midwest: IA, IL, IN, KS, MI, MN, MO, ND, NE, OH, SD, WI
- West: AK, AZ, CA, CO, HI, ID, MT, NV, NM, OR, UT, WA, WY

The values for **CENREG** are:

- 1 = Northeast
- 2 = South
- 3 = Midwest
- 4 = West

DADEMPLD is the composite variable that indicates the employment status of the father (birth/adoptive/step/foster/guardian). DADEMPLD was created using the variables DADWORK (PV6), DADLEAVE (PV7), DADHOURS (PV8), DADLOOK (PV9), and DADPUBL, DADPRIV, DADEMPL, DADREL, DADANSAD (all from PV10).

The values for DADEMPLD are:

- 1 = Working 35 hours or more per week
- 2 = Working less than 35 hours per week
- 3 = Looking for work
- 4 = Not in the labor force
- 1 = No father for the subject youth in the household

DISABLTY indicates whether the sampled youth has a disability. It is a composite variable created using the variables MAINRSLT, HDDEAFIM, HDBLNDIM, HDORTH0, HDDEVEL, HDOTHER, HDLEARN, HDRETARD, HDSPEECH, HDDISTRB (all from PT5 and PT6).

The values for DISABLTY are:

- 1 = Currently has a disability
- 2 = Does not currently have a disability

FAMILY is the composite variable that describes the family type, based on the presence of parents and siblings. FAMILY was created using the derived variables HHPARN1 and NUMSIBS.

The values for FAMILY are:

- 1 = Two parents and siblings
- 2 = Two parents and no siblings
- 3 = One parent and siblings
- 4 = One parent and no siblings
- 5 = Other

HH18OVER is the counter-derived variable that indicates the number of household members age 18 and older, including the sampled youth. The responses collected at S6 or PA7 were counted for this variable.

HHDAD is the composite variable that indicates whether a birth, adoptive, step, or foster father of the youth resides in the household with him/her. HHDAD was created using the variables DADTYPE (PA10), MOMTYPE (PA9), and RESPSEX (S11).

The values for HHDAD are:

- 1 = Birth or adoptive father
- 2 = Step or foster father
- 3 = Male respondent/no mother or father in household
- 4 = Someone else

HHMOM is the composite variable that indicates whether a birth, adoptive, step, or foster mother of the youth resides in the household with him/her. HHMOM was created using the variables MOMTYPE (PA9), DADTYPE (PA10), and RESPSEX (S11).

The values for HHMOM are:

- 1 = Birth or adoptive mother
- 2 = Step or foster mother
- 3 = Female respondent/no mother or father in household
- 4 = Someone else

HHPARN1 is the composite variable that designates by broad classification the sampled youth's parents who reside in the household. It denotes a two-parent family, a one-parent family, or a family with nonparent guardians. HHPARN1 was created using the derived variables HHMOM and HHDAD.

The values for HHPARN1 are:

- 1 = Mother (birth, adoptive, step, or foster) and father (birth, adoptive, step, or foster)
- 2 = Mother (birth, adoptive, step, or foster) only
- 3 = Father (birth, adoptive, step, or foster) only
- 4 = Nonparent guardian(s)

HHTOTAL is the counter-derived variable that indicates the total number of people living in the household.

HHUNDR6 is the counter-derived variable that indicates the total number of household members younger than 6 years old, including the sampled youth. The responses collected at S6 and PA7 were counted for this variable.

HHUNDR13 is the counter-derived variable that indicates the total number of household members younger than 13 years old, including the sampled youth. The responses collected at S6 and PA7 were counted for this variable.

HHUNDR18 is the counter-derived variable that indicates the total number of household members younger than 18 years old, including the sampled youth. The responses collected at S6 and PA7 were counted for this variable.

HHUNDR21 is a counter-derived variable that indicates the number of household members who are 20 years old or younger, including the sampled youth. The responses collected at S6 and PA7 were counted for this variable.

LANGUAGE is the composite variable that describes whether the language spoken most often at home by the parent(s)/guardian(s) in the household is English. LANGUAGE was created using the variables MOMLANG (PU2), MOMSPEAK (PU3), DADLANG (PV1), and DADSPEAK (PV2).

The values for LANGUAGE are:

- 1 = Both/only parent(s)/main language at home is English
- 2 = One of two parents speaks a non-English language most at home
- 3 = Both/only parent(s) speak a non-English language most at home

MOMEMPLD is the composite variable that indicates the employment status of the mother (birth/adoptive/step/foster/guardian). **MOMEMPLD** was created using the variables **MOMWORK** (PU7), **MOMLEAVE** (PU8), **MOMHOURS** (PU9), **MOMLOOK** (PU11), and **MOMPUBL**, **MOMPRIV**, **MOMEMPL**, **MOMREL**, and **MOMANSAD** (all from PU12).

The values for **MOMEMPLD** are:

- 1 = Working 35 hours or more per week
- 2 = Working less than 35 hours per week
- 3 = Looking for work
- 4 = Not in the labor force
- 1 = No mother in household

MOMFTFY is the composite variable that indicates if the mother (birth/adoptive/step/foster/guardian) of the youth currently works full time and has worked 12 months of the past year. **MOMFTFY** was created from the variables **MOMWORK** (PU7), **MOMMTHS** (PU10), and the derived variable **MOMEMPLD**.

The values for **MOMFTFY** are:

- 1 = Full time (35 hours or more) full year
- 2 = Less than full time or less than full year
- 3 = Not employed during year
- 1 = No mother in household

NUMSIBS is a counter variable that indicates the total number of siblings with whom the sampled youth lives. The responses to **RELATION** (PA8) were counted for this variable.

PARGRADE is the composite variable that indicates the highest level of education for the subject youth's parents or nonparent guardians who reside in the household. **PARGRADE** was created using the variables **MOMGRADE** (PU5), **MOMDIPL** (PU6), **DADGRADE** (PV4), and **DADDIPL** (PV5).

The values for **PARGRADE** are:

- 1 = Less than high school diploma
- 2 = High school diploma or its equivalent
- 3 = Voc/tech degree or some college
- 4 = Bachelor's degree
- 5 = Graduate/professional school

RACEETHN denotes both the race and ethnicity of the youth. If the respondent to the Parent Interview designates the youth's ethnicity as Hispanic, RACEETHN is Hispanic regardless of whether RACE was classified as white, black, or another race. RACEETHN was created using the variables CRACE (PA3), COTHRACE (PA3OV), and CHISPAN (PA4).

The values for RACEETHN are:

- 1 = White, non-Hispanic
- 2 = Black, non-Hispanic
- 3 = Hispanic
- 4 = All other races (e.g., American Indian or Alaska Native, Asian or Pacific Islander), non-Hispanic

SCHLGRAD is a composite variable that categorizes the level of the youth's school. SCHLGRAD was created using the variables SLOW (PD6) and SHIGH (PD7). Note that although this variable also appears on the Parent Interview file, the values are not the same in both files. Category 1 on the Parent Interview file represents early childhood programs and center-based child care, a category that is not applicable for this 6th through 12th grade population. To maintain consistency across data files, category 1 ("Preschool/Kindergarten") is omitted for this derived variable on the Youth Interview file.

The values for SCHLGRAD are:

- 2 = Elementary school
- 3 = Middle or junior high school
- 4 = High school
- 5 = Combined grades school
- 1 = Home schooled or not enrolled

SCHLTYPE is a composite variable that classifies the school currently attended as either public or private. Schools that are public are further classified as being chosen or assigned, and schools that are private are also classified as being church-related or not church-related. SCHLTYPE was created using the variables SPUBLIC (PD1), SCHOICE (PD2), and SRELGON (PD4).

The values for SCHLTYPE are:

- 1 = Public, assigned
- 2 = Public, chosen
- 3 = Private, church-related
- 4 = Private, not church-related
- 1 = Home schooled or not enrolled

SCNUMSTU is a composite variable that classifies the estimated number of students in the sampled youth's school. SCNUMSTU was created using the variables SLOW (PD6), SHIGH (PD7), SNUMSTUD (PD8), and SNUMGRAD (PD80V).

The values for SCNUMSTU are:

- 1 = Under 300
 - 2 = 300–599
 - 3 = 600–999
 - 4 = 1,000 or more
 - 1 = Home schooled or not enrolled
-

ZIP18PO2 is a linked-derived variable that categorizes the percent of families with children under age 18 in the subject's ZIP Code who were below the 1989 poverty line in 1990.

The values for ZIP18PO2 are:

- 1 = Less than 5 percent
- 2 = 5–9 percent
- 3 = 10–19 percent
- 4 = 20 percent or more

ZIPBLHI2 is a linked-derived variable that categorizes the percent of persons in the subject's ZIP Code who were black or Hispanic in 1990.

The values for ZIPBLHI2 are:

- 1 = Less than 6 percent
- 2 = 6–15 percent
- 3 = 16–40 percent
- 4 = 41 percent or more

ZIPURBAN is a linked-derived variable that categorizes the subject's ZIP Code as urban or rural in 1990. The definitions for these categories are taken directly from the 1990 Census of Population. An urban area (UA) comprises a place and the adjacent densely settled surrounding territory that together have a minimum population of 50,000 people. The term "place" in the UA definition includes both incorporated places, such as cities and villages, and Census-designated places (unincorporated population clusters for which the Census Bureau delineated boundaries in cooperation with state and local agencies to permit tabulation of data for Census Bureau products). The "densely settled surrounding territory" adjacent to the place consists of contiguous and noncontiguous territory of relatively high population density within short distances. The specific density and distance requirements are defined in the *Federal Register*, Vol. 55, No. 204.

The second category is urban, outside of UA. This category includes incorporated or unincorporated places outside of a UA with a minimum population of 2,500 people. One exception is for those who live in extended cities.² Persons living in rural portions of extended cities are classified as rural rather than urban. Places not classified as urban are rural.

Since a ZIP Code can cut across geographic areas that are classified in any of the three categories, the ZIPURBAN variable is classified into the category that has the largest number of persons. For example, if a ZIP Code has 5,000 persons in the first category (urban, inside UA), 0 persons in the second category (urban, outside UA), and 1,200 persons in the third category (rural), it is classified as inside UA.

The values for ZIPURBAN are:

- 1 = Urban, inside UA
- 2 = Urban, outside UA
- 3 = Rural

² An extended city is either an incorporated place of any population size inside a UA, or an incorporated place with a population of 2,500 or more people outside a UA that contains one or more component rural areas. Each component rural area must have a population density of less than 100 people per square mile, consist of at least one entire Census block, and include at least 5 square miles of continuous area. An extended city can have both urban and rural population and land areas.

6.1.6 Weighting and Variance Estimation Variables

The first variable in this section of the file is FYWT. It is the variable that should be used as the weight variable to estimate the characteristics of youth. This weight contains all of the adjustments for the probabilities of selection, nonresponse, and undercoverage as described in Volume I, chapter 3 of this manual.

The 80 replicate weights, FYWT1 to FYWT80, are the next variables in this section. These replicate weights can be used with the WesVar program to produce estimates of the sampling errors of the estimates. More details on how the replicate weights were created and how they can be used with WesVar are given in Volume I, chapter 3, along with an approximation method that does not involve using the WesVar procedure.

The remaining two variables in this section are YPSU and YSTRATUM. These variables are provided to enable users to compute sampling errors using Taylor Series approximations, such as the SUDAAN procedure (Shah et al. 1995). The methods used to construct the values for YPSU and YSTRATUM are also discussed in Volume I, chapter 3.

6.1.7 Imputation Flag Variables

Item nonresponse occurred when some, but not all, of the responses were missing from an otherwise cooperating respondent. For all the items on the Youth Interview public use file, the missing data were imputed, or "filled in," to help users of the data. For each variable involved in imputation, an imputation flag variable was created. If there is no imputation flag, then no imputation was performed on that variable. This flag can be used to identify imputed values. Volume I, section 3.8 discusses the meaning of values assigned to the imputation flags.

The naming convention for the imputation flag variables was to drop the last letter of the variable name and replace it with an "F." For example, the imputation flag for SEX is SEF. This naming convention holds true for all Youth Interview variables except for variables that originally end in "F," variables that will become confused with other variables when the last letter is dropped, or variables that end in a number. In these cases, the letter before the last digit is dropped and replaced with an "F." For example, the imputation flag for SAWKS1 (YD5) is SAWKF1. The imputation flags appear on the file in the same order as the variables to which they refer.

6.1.8 Numeric and Character Variables

All of the variables in the Youth Interview file except MAINRSLT, PATH, GRADE, GRADEEQ, ALLGRADE, SLOW, and SHIGH have numeric formats.

6.2 Guide to the Codebook

The codebook, shown in appendix F, contains complete descriptions of the contents of the data file. The codebook contains system variables, household membership variables, questionnaire variables, household characteristic variables, derived variables, weighting and variance estimation variables, and imputation flag variables. The codebook provides all the pertinent information for the variables in the file, including the variable name, the question wording, the position and format of the variable in the file, and the responses to the item. The unweighted frequency, unweighted percent, weighted frequency, and weighted

percent are provided with each response. Figure 6-1 provides a description of each of the items appearing in the codebook.

6.3 Public and Restricted Data Files

This manual is designed to assist users of the public use Youth Interview data file. The public use file contains all the variables detailed above but does not contain certain variables excluded from the file for confidentiality reasons. These include the names of household members, verbatim string responses that might identify persons, and respondents' individual ZIP Codes (HZIPCODE). Some of these variables (e.g., verbatim strings of other-specify categories, HZIPCODE) that are excluded from the public file are included on a separate restricted-use file. These variables are indicated with "/R" on the Youth Interview questionnaire in Volume I, appendix A. The restricted data file also contains close to 100 ZIP Code variables from the 1990 Census of Population Summary Tape File 3B (STF3B), including the median household income of the area, the level of community mobility in the area, and the percentage of owner-occupied households in the area. The restricted data file may be obtained through a special licensing agreement with NCES. Go to <http://nces.ed.gov/pubsearch/licenses.asp> for details on how to become licensed.

6.4 Linking the Youth Interview to Other NHES:1999 Data Files

It is possible to link the Parent, Youth, and Adult Education Interview data files. Instructions for doing so are presented in appendix G.

Figure 6-1.—Example of the codebook format

- (1) **YC1 – First, does your school have a student government?**
- (2) **Variable Name :** PRSTUGOV YC1 – SCH HAS STUDENT GOVT
- (3) **Record Number :** 1
- (4) **Position:** 149-150
- (5) **Format:** N2.
- (6) **Comment:** Previous NHES Surveys: 1996, PRSTUGOV; 1993, N/A

(5) **Response**

	(8) Codes	(9) Frequency	(10) Percent	(11) Weighted Frequency	(12) Weighted Percent
1 YES	1	6,487	82.0	22,177,840	82.2%
2 NO	2	1,319	16.7	4,812,564	17.8%
RESERVED CODE : -1 INAPPLICABLE	-1	107	1.4	344,226	
		7,913	100.0	27,334,630	100.0%

DESCRIPTIONS:

- (1) **Questionnaire number and question wording:** This is the exact question wording as it appeared in the questionnaire.
- (2) **Variable Name:** This is the variable name associated with each item. It is the unique identifier present in the SAS, SPSS, or STATA data file. The variable name is followed by a short label, which is associated with each of the variables. This label also appears in the SAS, SPSS, or STATA data file. Labels contain the questionnaire item numbers. Labels that begin with the letter “D” indicate a derived variable.
- (3) **Record number:** Record number gives the record on which the variable is located.
- (4) **Position:** This provides the starting and ending position of the variable in the raw data file.
- (5) **Format Name:** This provides the variable type, its width, and the number of positions after the decimal point, if necessary. A data type of “N” represents numeric variables and “C” represents character variables. In this example, PRSTUGOV is a numeric variable with a length of 2 and no decimals.
- (6) **Comment:** Reference to the variable name for questions asked in previous NHES surveys is contained in comment.
- (7) **Response:** This column provides the response categories for the variable.
- (8) **Codes:** This column provides the actual numeric/character codes present in the data files.
- (9) **Frequency:** This column displays the unweighted frequency counts for this variable. The counts for missing values are also included for the unweighted values.
- (10) **Percent:** This column displays the unweighted frequency counts from the previous column as percentages. This column also contains percentages for missing values.
- (11) **Weighted Frequency:** This column displays the frequency counts weighted up to the population.
- (12) **Weighted Percent:** This column displays the percentages of frequency counts weighted up to the population. This column does not include percentages for missing values.

7. DATA CONSIDERATIONS AND ANOMALIES

The purpose of this section is to bring to the user's attention certain data considerations and data anomalies in the NHES:1999 Youth Interview data, to describe the nature of those anomalies, and, where appropriate, to identify possible means of taking them into account when analyzing the data.

7.1 Youth Service Activities

In the Youth Interview, students were asked whether they had participated in any community service activities during the current school year (section YD). Respondents who indicated that they had participated were asked to name up to three service activities in which they had participated. The purpose of obtaining the names of the activities was to identify them when subsequent questions were asked (whether the activity had been done on a regular basis, how many weeks had the youth done the activity, etc.). For the reported activities, the youth's own assessment of whether it constituted a type of service was accepted. Review of the names of service activities indicates that the vast majority of youth correctly identified those activities they named as service. However, some of the names given by youth were ambiguous, and it is not possible to ascertain whether the activity in fact constituted a type of service or volunteer work.

7.2 Correspondence Between Age and Grade

In any survey in which information on people's ages and grades in school (or grade equivalents), some cases appear in which age and grade do not seem to correspond. This is true for each year of the NHES, the CPS October Educational Supplement, and other surveys. In many cases in the NHES, the situations behind these discrepancies are unclear – we do know that interviewers were prompted by the CATI system to confirm apparent discrepancies, and in some cases, interviewers provided more complete explanations. For example, a person may be in a grade far lower than his/her age would indicate, but may be retarded and in a special education program with a low grade equivalent. Some adults long past the modal age of high school completion may report a secondary grade because they are enrolled in adult nighttime high school. Analysts may wish to examine these unusual cases and make their own decisions about how to treat these cases in their analyses.

7.3 Income to the Nearest Thousand Dollars

In those households whose income category and household size indicated that they may be at or below the poverty line, household income to the nearest thousand dollars was requested. As the values in the data file show, some respondents did not answer in thousands, but gave somewhat more specific answers. Rather than lose this information, the exact response was retained.

7.4 Misclassified Youth

With rare exceptions, only one youth interview was conducted in a household. The exceptions included cases in which the child's grade was reported erroneously by the Screener respondent, or the child was sampled as K through 5th grader, and the most knowledgeable parent correctly reported him or her as a 6th through 12th grader. If another child had been sampled as a 6th through 12th grader in the same

household, a youth interview would have been conducted with both students. In only nine households were two youth interviews completed.

APPENDIX E

**CROSS-REFERENCE OF NHES:1999 VARIABLES WITH
VARIABLES FROM PREVIOUS NHES ADMINISTRATIONS**

This page is intentionally blank.

CROSS-REFERENCE OF NHES:1999 WITH PREVIOUS NHES SURVEYS

The NHES:1999 contains many items that were administered in the previous NHES surveys. To aid data users who are interested in analysis of data from multiple survey years, a cross-reference of variables from the NHES:1999 and those of other survey years is given in this section. The information is presented in two ways. First, a guide to the cross-reference provides a quick overview by indicating which items are available for multiple years. The detailed cross-reference that follows gives the name of the variable and the questionnaire item number for each survey in which the item was administered.

This page is intentionally blank.

Table E-1.—Youth Interview Cross-Reference Guide

Variable Description	Item Administered in Previous Surveys	
	1999	1996 Youth Civic Involvement
School Environment		
Child is challenged at school	√	√
Child enjoys school	√	√
Teachers maintain discipline	√	√
Students/teachers respect each other	√	√
Principal maintains discipline	√	√
Student opinions count at school	√	
Friends think it's important to work hard for grades		√
Friends think it's important to behave		√
Rules about bedtime on school nights	√	
Rules about time to be home on school nights	√	
Rules about doing homework	√	
Rules about viewing TV	√	
Rules about TV programs watched	√	
Family discusses decisions with the child	√	
Family listens to child's side of an argument	√	
Family lets child have say in rules	√	
Family visited library with child the past month		
Family visited art gallery/museum the past month		
Family visited zoo/aquarium the past month		
Activities Promote/Indicate Personal Responsibility		
School has student government	√	
Served/worked in student government	√	
Participated in school activities	√	
Participated in out-of-school activities	√	
Works for pay	√	
Hours per week works	√	
Looked for job this school year	√	
Service Activities		
Does community service activity	√	
Participating in activity now	√	
Service activity schedule	√	
Frequency of service activity	√	
Number of weeks for service activity	√	
Hours per week for service activity	√	
Number of hours per week for service activity	√	

Table E-1.—Youth Interview Cross-Reference Guide—Continued

Variable Description	Item Administered in Previous Surveys		
	1999	1996 Youth Civic Involvement	1993 School Safety and Discipline
School arranged this student service activity		√	
School arranges service activities		√	
School requires service activity		√	
School required this student service activity		√	
Talk in class/group about service activity		√	
Required to write about service activity		√	
Activity for a grade in class		√	
Activities that Promote Civic Involvement			
Frequency youth reads national news		√	
Frequency youth watches/listens to national news		√	
Watch/listen to national news with family in past week		√	
Frequency talk about national news with family		√	
Can't understand politics/government		√	
Family has no say in what government does		√	
Allow freedom to speak against religion		√	
Some books should be kept out of the public library		√	
Could write letter to government official		√	
Could make statement at public meeting		√	
Job/political office held by Al Gore		√	
Who determines law constitutional		√	
Party with most members in the House		√	
Majority needed to override veto		√	
Party more conservative/national level		√	
Who nominates federal court judges		√	
Party with most members in the Senate		√	
First 10 amendments to Constitution		√	
Party favors larger defense budget		√	
Course requires attention to government issues		√	
Last year course required attention to govt. issues		√	
Class increased interest in government issues		√	
In class wrote letter to unknown person		√	
In class gave speech or oral report		√	
In class took part in debate		√

Variable Description	Item Administered in Previous Surveys		
	1999	1996 Youth Civic Involvement	1993 School Safety and Discipline
Plans for Postsecondary Education			
Will attend school after high school			√
Will graduate from a four year college			√
Will start college education at 2- or 4-year school			
Discussed academic requirements with parent			
Discussed academic req. with teacher or counselor			
Taken test for college admission			
Discussed colleges/schools with parents			
Discussed colleges/schools with teachers			
Like to attend public/private 4-year college			
Like to attend in or out of state college			
Information about tuition/fees for specific college			
1 year cost tuition and fees at 4-year college			
Tuition of 4-year college includes other fees			
Give estimated tuition and fees at 4-year college			
Tuition and fees cost at 4-year college			
Estimate include room and board			
Estimated tuition and fees 1 year instate 4-year college			
Tuition and fees cost 1 year instate 4-year college			
Estimate include room and board			
Will attend vocational/technical/community/jr college			
Information about tuition cost for vocational/technical			
Tuition cost for vocational/technical			
Tuition for vocational/technical include other fees			
Estimate of tuition/fees cost of vocational/tech 1 year			
Tuition/fees cost of vocational/tech for one year			
Estimate include room and board			
Estimate tuition cost 1 year at 2-yr community college			
Tuition/fees cost of community college for 1 year			
Estimate include room and board			
Talk about cost of college with parents			
Talk about cost of college with teachers			
Talk about financial aid with parents			
Talk about financial aid with teachers			
Reason not attending school after high school			

Table E-1.—Youth Interview Cross-Reference Guide—Continued

Variable Description	Item Administered in Previous Surveys	
1999	1996 Youth Civic Involvement	1993 School Safety and Discipline
Additional Items on Service Activities		
Received money or gifts in return for service		
Did service on own or organized by others		
Who was helped the most by service activity		
Helped children or students		
Helped adults		
Helped elderly		
Helped family or friends		
Activity organized to help poor, hungry, or homeless		
Activity organized to help disabled

Information about tuition cost for vocational/technical	YSOTHTUI	YF13				
Tuition cost for vocational/technical	YSOTHAMT	YF14				
Tuition for vocational/technical include other fees	YSOTHINC	YF14OV				
Estimate of tuition/fees cost of vocational/tech 1 year	YSOESTUI	YF15				
Tuition/fees cost of vocational/tech for one year	YSOESAMT	YF15OV1				
Estimate include room and board	YSOESINC	YF15OV2				
Estimate tuition cost 1 year at 2-year community college	YS2YRTUI	YF16				
Tuition/fees cost of community college for 1 year	YS2YRAMT	YF16OV1				
Estimate include room and board	YS2YRINC	YF16OV2				
Talk about cost of college with parents	YSCOSFAM	YF17				
Talk about cost of college with teachers	YSCOSTEA	YF17OV				
Talk about financial aid with parents	YSAIDFAM	YF18				
Talk about financial aid with teachers	YSAIDTEA	YF18OV				
Reason not attending school after high school	YSNOTREA	YF19				
Additional Items on Service Activities						
Received money or gifts in return for service	SAPYMT1-3	YG2				
Did service on own or organized by others	SAARNG1-3	YG3				
Who was helped the most by service activity	SAHELP1-3	YG4				
Helped children or students	SAHCHIL1-3	YG5				
Helped adults	SAHADLT1-3	YG5				
Helped elderly	SAHELDR1-3	YG5				
Helped family or friends	SARELA1-3	YG6				
Activity organized to help poor, hungry, or homeless	SAPOOR1-3	YG7				
Activity organized to help disabled	SADISB1-3	YG8				

APPENDIX F
YOUTH INTERVIEW CODEBOOK

This page is intentionally blank.

YOUTH INTERVIEW CODEBOOK

This section of the manual contains the codebook for the NHES:1999 Youth Interview data file. Prior to using the codebook and data file, readers should review chapter 6, Guide to the Data File and Codebook, and chapter 7, Data Considerations and Anomalies. Both of those chapters provide information that will make it easier for analysts to understand the layout of the data file and the variables that have been included.

For each data element, the question, variable label, file location, format, codes, value labels, unweighted frequency, unweighted percents, weighted frequency, and weighted percents are presented. Readers should review figure 6-1 on page 15 and the accompanying text for a detailed description of the codebook entries. As the reader will see in reviewing that section, standard formats have been used, and the same inapplicable code (-1) is used for all variables.

The data file contains several types of variables that are useful for analytical and methodological applications. The list below indicates the types of variables, the page of the text on which a discussion of the variable type begins, and the codebook pages on which the variables can be found.

Variable set	Text Discussion	Codebook pages
System variables (includes ID)	Ch. 6, pp. 3–4	F-3 to F-4
Household membership	Ch. 6, pp. 4–5	F-4 to F-8
Questionnaire items	Ch. 6, pp. 5–6	F-8 to F-56
Household characteristics	Ch. 6, p. 6	F-57 to F-59
Derived variables	Ch. 6, pp. 6–12	F-59 to F-66
Weights, YPSU, and YSTRATUM	Ch. 6, p. 13	F-66 to F-80
Imputation flags	Ch. 6, p. 13	F-80 to F-116

NOTE: Questionnaire items PA7 (age and sex) and PA8 (relationship) were asked to obtain household membership.

This page is intentionally blank.

APPENDIX G

DIRECTIONS AND CODE FOR LINKING DATA FILES

This page is intentionally blank.

Linking the NHES:1999 Data Files

It is possible to link information from the three NHES:1999 files. Information about the file identifiers is required to understand this process. In the NHES:1999, there are three types of identifiers. They are the **household** identification numbers (**BASEID**), interview **subject** identification numbers (**ENUMID**), and **interview** or case identification numbers (**BASMID**). In addition, two-digit **person numbers** are provided on the Parent Interview data file for the respondent to the extended interview (**RESPNUM**) and the mother (**MOMNUM**), if any, and father (**DADNUM**), if any, in households in which an interview was conducted about a child.

- **BASEID** is the **household** identification number. This eight-digit identification number is the same for every data record within a household. It is provided on the Parent Interview file and the Youth Interview file to permit data users to form linkages between these interviews conducted in the same household.
- **ENUMID** is the **interview subject** identification number and is composed of 10 digits. The first eight digits are the same as the household identifier, the **BASEID**. The additional two digits in the **ENUMID** qualify the subject of the interview and were determined by the enumeration order of persons in the household. For example, if the second child enumerated was sampled to be the subject of a Parent Interview, the **ENUMID** will end in 02. If this child was also sampled as the subject of a Youth Interview, the **ENUMID** on the Youth file will also end in 02. Thus, **ENUMID** is the same in the Parent Interview about a given youth and in that youth's own Youth Interview record. The **ENUMID** for an Adult Education Interview will be unique within the household.
- **BASMID** is the unique **interview** or case identification number and is composed of 12 digits. Each Parent Interview, Youth Interview, or Adult Education Interview has a unique interview ID. The first 8 digits of the **BASMID** are the same as **BASEID** for the household to which the interview belongs. The first 10 digits of **BASMID** are the same as the **ENUMID** of the subject of the interview. The last two digits of the **BASMID** are the sequential interview identifier and make the **BASMID** unique. Therefore, a Parent Interview record and a Youth Interview record about the same youth would have the same value for **ENUMID**, but each interview would have its own unique **BASMID**. For the Parent Interview, always completed first about a subject child, the last two digits are 01; for the Youth Interview, the last two digits are 02. Because sampled adults are the subject of only one interview in the household, the **ENUMID** for an Adult Education Interview is unique within the household, and the last two digits of the **BASMID** are 01. **BASMID** is the variable specified as the case identification number when creating a **WesVar** analysis from the Parent Interview, Youth Interview, or Adult Education Interview files (see Volume I, chapter 3 of this manual for a discussion of variance estimation and **WesVar**.)
- In the Parent Interview and Youth Interview data files, four two-digit **person numbers** are provided -- **MOMNUM** for the child's mother (if any), **DADNUM** for the child's father (if any), **RESPNUM**, the person number of the respondent to the Parent Interview, and **CHILDNUM** for the subject child or youth. If the mother or the father was the respondent to the Parent Interview, **MOMNUM** (or **DADNUM**) will have the

same value as RESPNUM. In the Adult Education Interview data file, the person number for the sampled adult is the last two digits of the ENUMID.

In developing the public use data files, care was taken to include on all of the data files those person-level variables that were most likely to be needed by analysts. For example, the educational attainment of the child's parents are included on the Youth Interview file, since these parent characteristics are likely to be of interest to many analysts. In addition, since household characteristics (such as whether the home is owned or rented and household income) are likely to be used in analyses, these variables are contained on all of the NHES:1999 data sets and it is not necessary to copy them from one file to another. However, there may be circumstances in which an analyst would like to copy data items about a household member from one file to another.

Before linking, data users should consider the following tips regarding the length of time required to run a program and use of disk space:

- The data files are provided in ID order -- all of the following examples present code for sorting data files prior to linking (merging). Sorting the files can take up considerable time and disk space. If the files are already in the order required by the analyst, sorting is unnecessary.
- Keep only the variables required for your analysis -- specifying only the variables needed for the analysis will significantly improve the speed of the linking and the created data file will use less disk space. The use of a KEEP option, demonstrated in some of the following examples, can be used for this purpose.

Linking between Parent and Youth Interview files is straightforward. The common identifier (key) is the ENUMID, and is available on both files. Sample SAS code to bring together these two files follows:

```
PROC SORT DATA = parent_filename OUT = PARENT;  
BY ENUMID;  
RUN;  
  
PROC SORT DATA = youth_filename OUT = YOUTH;  
BY ENUMID;  
RUN;  
  
DATA TEMP;  
MERGE parent_filename (IN=ONPARENT) youth_filename (IN=ONYOUTH);  
BY ENUMID;  
RUN;
```

Sample SPSS for Windows code is:

```
GET FILE = 'youth file'.  
  /KEEP = ALL.  
SORT CASES BY ENUMID.  
SAVE OUTFILE = 'temp'.  
  
GET FILE = 'parent file'.  
  /KEEP = ALL.  
SORT CASES BY ENUMID.  
  
MATCH FILES FILE = */FILE = temp  
  /BY ENUMID  
  /MAP.  
SAVE OUTFILE = 'merged file'.
```

Linking between Adult Education and Parent or Youth Interview files may be of interest to analysts. The ENUMID on the Adult Education file can be used with MOMNUM, DADNUM, or RESPNUM to identify whether the subject of the Adult Education Interview was also a parent and/or the respondent to a Parent Interview. In this case, BASEID and the 2-digit person identifier contained in MOMNUM, DADNUM, or RESPNUM must be concatenated to create a new variable. This variable may be used with ENUMID from the Adult Education Interview file to merge the records. The following examples demonstrate combining Parent Interview data and Adult Education Interview data.

Sample SAS code to bring together these two files follows:

```
DATA PARENT;  
SET parent_filename;  
NENUMID = BASEID * 100 + RESPNUM;  
RUN;  
  
PROC SORT DATA=PARENT;  
BY NENUMID;  
RUN;  
  
PROC SORT DATA = adult_filename; OUT = ADULT;  
BY ENUMID;  
RUN;  
  
DATA BOTH;  
MERGE PARENT (IN=ONPARENT) ADULT (IN=ONADULT KEEP=ENUMID RENAME=(ENUMID=NENUMID));  
BY ENUMID;  
IF ONPARENT AND ONADULT;  
RUN;
```

Sample SPSS for Windows code is:

```
GET FILE='parent file' /KEEP=BASEID RESPNUM.  
COMPUTE NENUMID = BASEID * 100 + RESPNUM.  
COMPUTE ONPARENT=1.  
SORT CASES BY NENUMID.  
SAVE OUTFILE = 'temp'.
```

```
GET FILE='adult file' /KEEP=ENUMID.  
COMPUTE NENUMID = ENUMID.  
COMPUTE ONADULT=1.  
SORT CASES BY NENUMID.  
SAVE OUTFILE = 'temp2'.
```

```
MATCH FILES FILE='temp' /TABLE='temp2' /BY NENUMID /MAP.  
SELECT IF (ONPARENT=1 AND ONADULT=1).  
SAVE OUTFILE = 'merged file'.
```

APPENDIX H

YOUTH SERVICE ACTIVITY CODING MANUAL

This page is intentionally blank.

Note to data users:

Appendix G contains the coding manual that was used to code youth service activities as described by youth respondents at YD1 of the Youth interview, and for a sample of those youth, at YG1. The manual provides instructions and guidelines for coding and is addressed to actual and potential coders, although it may be of interest to data users for the purpose of seeing and having available an explicit statement of coding procedures and categories. The actual results of coding may be found in the Youth Interview codebook (appendix E) with respect to the following variables (described in section 6.1.3 of chapter 3):

BCODE1	BCODE2	BCODE3
SPCODEA1	SPCODEA2	SPCODEA3
SPCODEB1	SPCODEB2	SPCODEB3
SPCODEC1	SPCODEC2	SPCODEC3

This page is intentionally blank.

I. BACKGROUND

The National Household Education Survey (NHES) is a random-digit-dial telephone survey that collects data from households on the educational experiences of adults and children across the Nation. The NHES has been conducted on a periodic basis since 1991, and has gathered information about a wide range of education related topics, such as early childhood education, adult participation in various types of educational activities, children's readiness for school, school safety and discipline, and youth and adult civic involvement.

The 1999 National Household Education Survey (NHES:1999) is intended as an end-of-decade study, incorporating many of the same topics as in past cycles of the NHES. It includes three separate interviews or components, one for parents, one for adults, and one for youth. The Youth Interview collects data on a range of topics, including school and family environment, activities that promote personal responsibility and civic involvement, plans for postsecondary education, and youth service activities. Several of these topics were included in the Youth Civic Involvement component of the NHES:1996.

Youth service activities, a topic which first appeared in the NHES:1996, will be the focus of this coding task. In both the NHES:1996 and the NHES:1999, youth were asked whether they had participated in any community service activities or volunteer work at their school or in their community. If they reported some participation, they were then asked to name those activities and to describe the extent of their participation. In the NHES:1999, some youth were also asked additional follow-up questions that we hoped would provide greater detail about the activities in which they participated, as well as details about the sponsors and beneficiaries of the activities.

Reports by youth of the various service activities that they performed were provided in the form of open-ended statements, called "descriptive strings," detailing what they did. Since data users will be interested in understanding the different kinds of service activities that youth perform, each of the descriptive strings will be coded into a limited set of predetermined categories.

This manual provides instructions on how the service activity descriptive strings should be coded. It will help coders to understand the different categories, and it should prove useful in assigning codes to difficult cases. The remainder of this manual is organized as follows:

- Coding categories;
- Coding procedures;
- Steps in coding service activities;
- Coding ambiguous cases.

II. CODING CATEGORIES

Youth community service activities within the NHES:1999 youth component will be coded according to the categories and procedures described in this manual. For each service activity, short and long descriptive strings were collected. Both of these strings will be used to code the service activity. The short string is a brief description or the name of the activity as reported by respondents and typed in by interviewers. A respondent can name up to three activities. The short string is provided by youth in response to the following question. (Examples of actual answers are provided.)

Now I'd like to ask you about community service or volunteer activity in your school or community. This includes ongoing activities like tutoring other students, visiting senior citizens, and so on, but does not include work for pay. It might be something done through your school, through your church or synagogue, or on your own.

Please tell me what your service activities were this school year.

<i>First activity</i>	(1) <u>VISITING NURSING HOMES</u>
<i>Second activity</i>	(2) <u>TUTORED STUDENTS</u>
<i>Third activity</i>	(3) <u>CAN DRIVE</u>

The long string provides greater detail in describing the activity and is given in response to the following inquiry:

Earlier you said that you participated in (ACTIVITY NAME GIVEN IN RESPONSE TO THE FIRST QUESTION) as community service or volunteer work. Please describe in one sentence the work you did.

Examples: (1) SANG SONGS TO OLD PEOPLE AT A NURSING HOME
(2) TUTORED 9TH GRADERS IN SPANISH
(3) COLLECTED CANS OF FOOD TO GIVE TO THE HOMELESS

Each service activity described by respondents will be coded according to a two-level coding system, and both strings will be used to code the activity. The first level refers to the specific

kind of activity that was performed by the youth, for example, “teaching/tutoring,” “yard work,” or “collecting money.” These categories are specific in that they detail exactly what was done by the youth. The second level codes the activity into a “broad” category, such as “Collection and Distribution” or “Environmental.” These categories are broad in the sense that they may encompass many different kinds of specific service activities. In total, there are 43 specific activities and 13 broad categories.

Specific Activity (latest revised)	Broad Category
1. Teaching/tutoring 2. Coaching/teaching physical skills 3. Acting as a camp counselor 4. Assisting with day-to-day tasks/errands 5. Visiting/talking 6. Writing/calling 7. Reading to others 8. Acting/theatre production 9. Singing 10. Dancing 11. Playing musical instruments/band 12. Entertaining/playing games 13. Arts and crafts	1. Educational 2. Non-educational School-related 3. Care & Companionship 4. Religious 5. Collection & Distribution 6. Environmental 7. Event-related 8. Counseling 9. Community Organizations & Businesses/ Political 10. Disaster Relief 11. Health 12. Informal 13. Other
14. Babysitting 15. Assisting at a day care center	
16. Donating (one’s own belongings or money) 17. Collecting food, clothing, toys, and other goods (but not money) 18. Preparing food, clothing, toys and other goods 19. Distributing food, clothing, toys and other goods 20. Serving meals/snacks	
21. Baking, washing cars, selling certificates, selling raffle tickets, etc. 22. Collecting money 23. Athletic activity for fundraising	
24. Building 25. Renovating 26. Painting 27. Moving, lifting, loading, packing	

Specific Activity (latest revised)	Broad Category
28. Recycling 29. Yard work 30. Shoveling snow 31. Planting flowers, trees 32. Outdoor cleaning, such as in public areas like schools, parks, river areas, beaches, etc. 33. Indoor cleaning/housework 34. Setting-up/decorating 35. Assisting at parties 36. Administrative duties, such as ticket-taking, passing out programs, signing in participants, assisting customers, selling concessions, etc. 37. Filing, typing, photocopying, other clerical 38. Shelving books, other library 39. Taking inventory/stocking shelves 40. Recruiting 41. Project organization 42. Mentoring/staffing a hotline 43. Other	

Given this two-level system, each pair of descriptive strings will be assigned a specific activity code and a broad category code. So, for example,

TUTORING STUDENTS (*short string*)
 HELPED WITH HOMEWORK AND OTHER SKILLS IN SCHOOL (*long string*)

would be coded as specific activity “teaching/tutoring” and as broad category “Education.”

To take another example,

NURSING HOME COMPANIONSHIP (*short string*)
 I READ BOOKS TO ELDERLY NURSING HOME RESIDENTS (*long string*)

would be coded as specific activity “reading to others” and as broad category “Care & Companionship.”

While the majority of cases will have one specific activity code and one broad category code, it is possible for a string to be assigned more than one specific activity code. Assigning more than one specific activity code is only needed for those strings that seem to describe very different kinds of activities. Up to three specific activity codes may be given to a string that includes more than one type of activity. If there are more than three specific activities described, only the first three should be coded. Some examples of strings needing multiple codes are provided below.

NURSING HOMES (*short string*)
SANG SONGS AND TALKED WITH SENIORS (*long string*)

This example would be coded as specific activities “singing” and “visiting/talking,” and broad category “Care & Companionship.”

HELPING BOYS/GIRLS CLUB (*short string*)
HELPING CHILDREN WITH SPORTS, ARTS AND CRAFTS, AND MANY OTHER ACTIVITIES
(*long string*)

This example would be coded as specific activities “coaching/teaching physical skills,” “arts and crafts,” and “other,” and broad category “Community Organizations & Businesses/Political.”

INAUGURATION OF MAYOR (*short string*)
SERVED FOOD, ESCORTED CITIZENS TO TABLES, AND DECORATED (*long string*)

This example would be coded as specific activities “serving meals/snacks,” “administrative duties...,” and “setting up/decorating,” and broad category “Event-related.” (See Section IV, number 3 for further discussion about multiple codes.)

In order to code the service activity strings correctly, you should have an understanding of the different specific and broad categories as well as be familiar with examples of the categories. In addition, you need to be able to decide on the proper code for strings that are ambiguous, i.e., those cases for which more than one code is seemingly applicable, and those cases where there might be a conflict between information in the long and short strings, or not enough information to be certain. The next section of this manual will present definitions for all of the categories (specific and broad). The following section will illustrate the steps to follow in coding descriptive strings, and the final section will explain how to code ambiguous strings.

Specific Activity Codes

1. Teaching/tutoring

This service activity involves any kind of teaching, including formal teaching of seminars, classes, or workshops, or informal teaching one-on-one or with a few students. Grading papers for a teacher also belongs in this category. This category also includes tutoring at school or outside of school in subject areas (e.g., math, science, English), music, or other skills (e.g., using computers, reading, writing). It does not include coaching or teaching physical skills.

Examples:

I TAUGHT A CLASS AT THE COMMUNITY CENTER ON BICYCLE REPAIR.

TAUGHT 3RD AND 4TH GRADERS ABOUT BIBLE.

HELPED WITH HOMEWORK AND OTHER SKILLS IN SCHOOL.

TUTORED STUDENTS THAT HAVE TROUBLE LEARNING WITH THEIR WORK FOR CLASS.

2. Coaching/teaching physical skills

This category includes activities that involve training in physical skills, such as in sports (i.e., basketball, soccer, bowling, skiing), exercise, or in physical therapy (for injured or disabled people). It does not include activities related to assisting a coach or sports team, such as filling water bottles or keeping score.

Examples:

I WORKED IN A CHILD CARE CLASS TO HELP THEM TO EXERCISE.

WENT TO A COMMUNITY CENTER AND INSTRUCTED A BASKETBALL TEAM IN THE FUNDAMENTALS.

3. Acting as a camp counselor

This activity involves serving as a counselor at camp. If, however, the primary purpose of the camp was to train for a sport (e.g., soccer camp), code the specific activity as “coaching/teaching physical skills.”

Example:

I WAS A JUNIOR COUNSELOR AT A SUMMER CAMP.

4. Assisting with day-to-day tasks/errands

If the string describes assistance in the performance of daily tasks, household chores, or running errands, code it as “assisting with day-to-day tasks/errands.” This includes assisting the elderly in getting around within a nursing home as well as helping the staff distribute medications.

Example:

HELPED SENIOR CITIZENS WITH DAILY CHORES.

5. Visiting/talking

If the string describes going to see people who generally desire, but lack, the company of others, code it as “visiting/talking.”

Examples:

I WENT TO THE NURSING HOME TO VISIT.

TALKED WITH PATIENTS AND SAT WITH THEM IF THEY NEEDED COMPANY.

6. Writing/Calling

This category would include any kind of writing or telephone calling for the benefit of some organization, group of people, or a particular cause.

Examples:

WROTE ARTICLES AND LAID OUT THE NEWSPAPER.

CAMPAIGNING FOR DEMOCRATIC CANDIDATE – WORK CONSISTED OF
TELEMARKETING, AND PHONE BANKING.

7. Reading to others

This category involves reading out loud, for example, to children or to the elderly, the main purpose of which is to entertain. If the purpose of the activity is to teach others how to read, it should be coded as “teaching/tutoring.”

Examples:

I READ BOOKS TO ELDERLY NURSING HOME RESIDENTS.

READ STORIES TO CHILDREN AT NAP TIME AT THE CARE CENTER.

8. Acting/theater production

This category includes acting in or otherwise helping in the production of a play, musical, or skit.

Example:

HELPING THEATER PRODUCTIONS. RAN STAGE LIGHTING DURING TWO PRODUCTIONS AND HELPED WITH VARIOUS TASKS.

9. Singing

This specific activity includes any kind of singing, like choir or Christmas caroling. If the respondent reports being in a musical, code it as “acting/theatre production” and not as “singing” because “acting/theatre production” provides more specific information than “singing.”

Example:

CAROLED FOR ELDERLY PEOPLE AROUND THE BUILDING.

10. Dancing

This activity includes ballet, modern dance, ballroom dancing, country dancing, etc.

Example:

PERFORMED BALLET FOR ELDERLY PEOPLE.

11. Playing musical instruments/band

If the respondent reports playing any musical instrument in an orchestra, band, or solo, code it as this specific activity. To code a string in this category, the respondent must have participated in the performance. So, for example, “I helped set up for band concerts” would not be coded here, but would be coded as “setting up/decorating.”

Example:

ENTERTAINED SENIOR CITIZENS: PLAYED A MUSICAL INSTRUMENT, FLUTE.

12. Entertaining/playing games

Those kinds of entertainment not included in the previous four categories, such as playing games, telling jokes, magic tricks, juggling, etc., should be included in this category.

Examples:

SPENT ½ HOUR PLAYING BINGO WITH SENIOR CITIZENS.

PLAYED GAMES WITH KIDS AT A HOMELESS SHELTER.

13. Arts and crafts

This category involves any arts and crafts activities, such as drawing, basket weaving, designing Christmas cards, jewelry making, etc.

Example:

HELPED YOUNG CHILDREN TO MAKE NECKLACES.

14. Babysitting

If the respondent reports supervising or caring for children without providing other details, code this as “babysitting.” However, if the respondent specifies that he or she cared for children in a day care center or nursery, code this as “assisting at a day care center,” since this is the more specific activity code.

Example:

BABYSAT PRESCHOOLERS.

15. Assisting at a day care center

If the respondent says that he/she assisted at a day care center or nursery, code it as this activity.

Example:

ASSISTED W/CHURCH DAY NURSERY: CARING FOR CHILDREN AND INFANTS AND SEEING TO THEIR NEEDS.

16. Donating (one’s own belongings or money)

In a case where the respondent reports giving money or donating his or her own (or the family’s) belongings, code this as “donating.” The items given away could include canned foods, money, toys, etc.

Examples:

BROUGHT CANS FROM HOME.

HELPED PAY FOR THE PURCHASING OF THE FRUIT BASKETS FOR THE ELDERLY.

17. Collecting food, clothing, toys, and other goods (but not money)

If the respondent reports collecting items from other people in order to give to those in need, code as this activity. If, however, the respondent reports collecting money, code the string as “collecting money.”

Examples:

FOR HALLOWEEN INSTEAD OF GOING PARTYING WE WOULD GO TRICK OR TREATING FOR CANS.

GATHERED BLANKETS, FOOD, AND MEDICAL SUPPLIES FOR THE HUMANE SOCIETY.

18. Preparing food, clothing, toys, and other goods

This category involves the preparation of goods to be donated to those in need. Preparation means things like wrapping, sorting, packing up, or assembling. Any kind of preparation involving packing, loading, etc, that is not done to prepare goods for those in need (i.e., for neighbors, friends, or for a business) should be coded as “moving/lifting/loading/packing.”

Examples:

MADE PEANUT BUTTER AND JELLY SANDWICHES FOR THE HOMELESS.

WRAPPED GIFTS FOR POOR CHILDREN.

19. Distributing food, clothing, toys, and other goods

Distribution refers to activities such as passing out clothing at a shelter and handing out gifts at a nursing home. In cases where a string could be coded as “distributing food, clothing...” or “serving meals/snacks,” follow the “more specific” rule, so that for example, a string such as SERVED MEALS AT THE HOMELESS SHELTER should be coded as “serving meals/snacks,” since this category more closely fits the string.

Examples:

HELPED BRING BAGS OF FOOD TO SENIOR CITIZENS.

TOYS FOR TOTS: I HELPED HAND OUT THE TOYS.

20. Serving meals/snacks

The specific category “serving meals/snacks” includes activities that involve serving meals (breakfast, lunch, dinner) or snacks, usually at homeless shelters or residences for the elderly. Food that is simply taken to a shelter (i.e., canned food) or food bank should be coded as “distributing food, clothing...”, since the respondent is not actually serving a meal or interacting with those who will receive the food.

Examples:

HELPED THE HOMELESS: HELPED OUT WITH SERVING FOOD.

GAVE OUT PLATES OF FOOD AT COMMUNITY CENTER.

21. Baking, washing cars, selling certificates, selling raffle tickets, etc. for fundraising

This specific activity involves performing a service or selling items in exchange for money for charitable purposes. The activities listed in the name of this category are examples only and many similar activities will fit in this category (e.g., selling candy). If the activity was not done for fundraising purposes but rather for the profit of a business or organization (e.g., selling concessions for a company at a festival), code this as “administrative duties....”

Examples:

WASHED CARS TO COLLECT MONEY FOR THE SCHOOL MARCHING BAND.

WENT DOOR TO DOOR FUNDRAISING, SELLING CANDIES, CHOCOLATE.

22. Collecting money

Code those cases where respondents simply sought out and received money in support of some cause as “collecting money.” In these cases, nothing is given in return to the person who gives money.

Examples:

RAISED MONEY FOR CHILDREN’S HOME BY FILLING CANS UP WITH LOOSE CHANGE.

COLLECTED MONEY TO BUY TOYS FOR POOR CHILDREN FOR CHRISTMAS.

23. Athletic activity for fundraising

If the specific activity involves athletic activities (such as walking, running, bicycling, swimming, etc) to raise money, code it as this type of activity. Cases that involve assisting those who cannot walk on their own should be coded as “assisting with day-to-day tasks.” Cases that involve walking as a form of companionship should be coded as “visiting/talking.”

Examples:

I WALKED TWO MILES TO RAISE MONEY FOR PREGNANCY CARE CENTER.

RODE BIKE 100 MILES TO RAISE MONEY FOR NEEDY FAMILIES.

SWIM COMPETITION TO RAISE MONEY FOR CANCER RESEARCH.

24. Building

If the respondent reports building or installing some kind of structure from scratch, for the benefit of others, code it as “building.” This could include putting up road signs, helping to build a house, digging a pond, and so on. If the activity involved working on or repairing an existing structure, code it as “renovating.”

Examples:

WE CREATED A TRAIL IN THE WOODS AND PUT DOWN BLUE STONE SO THAT IT WAS WHEELCHAIR ACCESSIBLE.

WENT TO MEXICO WITH MY CHURCH GROUP AND BUILT A HOUSE FOR A NEEDY FAMILY.

25. Renovating

Activities that involve renovating, repairing or otherwise improving on a house or other existing structure should be coded as “renovating.” Painting should be coded under its own category below.

Examples:

HELPED RENOVATE OLD BUILDING TO BE USED FOR A SOUP KITCHEN.

DID DEMOLITION WORK SO THAT CHURCH COULD BE REBUILT.

26. Painting

Indoor and outdoor painting should be coded as this activity, for example, painting houses, buildings, rooms, cars, etc. However, painting for artistic purposes, i.e., murals, portraits, etc., should be coded as “arts and crafts.”

Examples:

PAINTED NEIGHBOR’S HOUSE.

PAINTED WALLS IN AND AROUND THE SCHOOL.

27. Moving/lifting/loading/packing

Activities that involve moving, lifting, loading, or packing objects should be coded in this category. If, however, the activity involved moving, lifting, loading, or packing goods for those in need (i.e., the elderly, the homeless, etc.), code the string as “preparing food, clothing, toys and other goods,” or else as “distributing food, clothing, toys and other goods.”

Examples:

MOVED BOXES IN AND OUT OF HOUSES.

LOADED FURNITURE ONTO A TRUCK.

28. Recycling

Activities that have to do with recycling (paper, plastic, cans, bottles, etc.) should be coded as this category.

Examples:

RECYCLING – WE SEPARATED THE NEWSPAPERS FROM THE OFFICE PAPERS.

COLLECTED PHONE BOOKS, CARRIED THEM TO TRUCKS, AND COUNTED THEM.

29. Yard work

Code any activity that involves working to beautify someone’s outdoor property as “yard work.” This might include raking, digging, lawn mowing, trimming bushes, killing weeds, collecting branches, chopping down trees, etc.

Examples:

MOWED PEOPLE’S LAWNS WITH A RIDING LAWN MOWER.

RAKED LEAVES AND TRIMMED BUSHES AT THE PARK.

30. Shoveling snow

If the respondent reports shoveling snow, e.g., for a neighbor, code that activity as “shoveling snow.”

Example:

SHOVELED SNOW FROM DRIVEWAYS IN NEIGHBORHOOD.

31. Planting flowers, trees

This category involves the planting of flowers, plants, bushes, trees, gardens, etc.

Examples:

PLANTED EARTH BOXES, WHICH ARE POTTED FLOWERS TO LIVEN UP THE SCHOOL.

I DUG A TRENCH WITH A SHOVEL, AND PUT IN DIFFERENT KINDS OF PLANTS.

32. Outdoor cleaning, such as in public areas like schools, parks, river areas, beaches, etc.

Any kind of outdoor cleaning (i.e., cleaning of trash, debris, or graffiti) should be coded as this category.

Examples:

WE WALKED AROUND AND PICKED UP TRASH BY THE SIDE OF THE ROAD.

CLEANED UP GRAFFITI IN NEIGHBORHOOD.

33. Indoor cleaning/housework

If respondents report cleaning within a building (either a home or a public building), code the string as “indoor cleaning/housework.” Indoor cleaning/housework might include such things as mopping, sweeping, dusting, organizing, picking up objects, washing, cleaning clothes, etc. If the beneficiary is specified as someone in need (i.e., an elderly person), code the specific activity as “assisting with day-to-day tasks/errands,” since we would like to retain information about who benefited from the activity.

Example:

HELPED NEIGHBOR TO CLEAN HOUSE AND GARAGE.

34. Setting-up/decorating

This specific activity involves assisting with setting-up or decorating for some event (e.g., a dance, a concert, a festival, a workshop, etc.).

Examples:

PUT UP LIGHTS IN THE PARK FOR CHRISTMAS.

HELPED SET UP FOR BAND CONCERTS.

35. Assisting at parties

This would include activities that involve preparation for parties, as well as activities that take place during parties.

Examples:

SENT OUT INVITATIONS FOR A NEIGHBOR'S FAREWELL PARTY.

CHRISTMAS PARTIES – GAVE CHRISTMAS TO LOW INCOME ELEMENTARY STUDENTS.

36. Administrative duties, such as ticket-taking, passing out programs, signing in participants, assisting customers, etc.

This category includes various kinds of duties within a larger project, event, or activity. If the string indicates the youth was, for example, assisting at a desk, giving out information, providing brochures, or giving guided tours, the activity should be included in this category. If, however, the youth reported playing a leading role in organizing or coordinating some administrative activity, follow the “more specific” rule, and code that activity as “project organization.” Similarly, if the youth reported an activity that involved recruiting members for a group or recruiting for participation in some activity or event, code that activity as “recruiting,” since this is more specific than “administrative duties.”

Example:

ASSISTED GIVING WATER TO RUNNERS FOR CORPORATE RUN FOR THE HEART FOUNDATION.

RAN ERRANDS FOR PEOPLE IN THE SCHOOL OFFICE.

37. Filing, typing, photocopying, other clerical

Office or clerical work should be coded here. These kinds of activities include filing, typing, photocopying, printing, formatting, and other similar office duties.

Examples:

FILING INFO ONTO A COMPUTER DISK.

MADE PHOTOCOPIES FOR THE SCHOOL OFFICE.

38. Shelving books, other library

Activities that occur in libraries should be coded as “shelving books, other library.” These include shelving, mending books, checking books in and out, and helping people to locate books.

Example:

USUALLY SORT BOOKS AND HELP WITH SALES, HELP LIBRARIAN CHECK IN BOOKS, CARD CATALOG.

39. Taking inventory/stocking shelves

Any activity that involves taking inventory (of books, foods, or other merchandise) or stocking shelves should be coded as “taking inventory/stocking shelves.” If the inventory takes place in a library, code the activity as “shelving books, other library,” since this is more specific.

Example:

I TOOK STOCK OF CLOTHES AT THE MISSION STORE.

40. Recruiting

The specific category “recruiting” includes activities that describe efforts to enlist membership in some group or else participation in some event or activity. In cases where a string could be coded as “administrative duties...” or “recruiting,” follow the “more specific” rule, so that for instance, a string such as TRIED TO GET PEOPLE TO VOLUNTEER TO GIVE BLOOD should be coded as “recruiting,” because this category provides more specific information about the activity.

Examples:

CONVINCED PEOPLE TO GO TO BLOOD DONATION CENTER.
POSTED UP ACTIVITY POSTERS IN SCHOOL.

41. Project Organization

The specific category “project organization” involves activities where the respondent reports taking a leading role in organizing and coordinating some event or activity. In cases where a string could be coded as “administrative duties...” or “project organization,” follow the “more specific” rule. For example, a string such as COMMITTEE TO PLAN THINGS: ORGANIZE SPIRIT WEEK AT SCHOOL should be coded as “project organization,” because this category provides more specific information about the activity than the more general category of “administrative duties...”

Examples:

HELPED ORGANIZE DANCE BY APPOINTING PEOPLE TO BRING FOOD AND SETTING UP TIME.

ORGANIZED AND SET UP EVENTS FOR SENIORS.

42. Mentoring/staffing a hotline

If a respondent reports mentoring, advising, or serving as a role model, or else reports counseling peers on social issues and norms (e.g., drugs, the ill-effects of gang membership, sexually transmitted diseases), code the string as “mentoring/staffing a hotline.” Also, use this code if the string describes counseling over the phone in urgent situations, such as talking to rape victims, people who are considering suicide, those experiencing domestic abuse, or other crises.

Examples:

WORK WITH YOUNG CHILD TO BUILD NEW FRIENDSHIP NOT HAD IN THE PAST.

I WAS A BIG BROTHER.

TALKED WITH 9TH GRADERS ABOUT PEER PRESSURE AND VIOLENCE.

TALKED KIDS OUT OF COMMITTING SUICIDE ON THE PHONE.

43. Other

Activities that do not fall into any other specific category should be coded as “other.”

Examples:

I HELPED THOSE IN NEED.

SAILING.

Broad Category Codes

1. Educational

This category includes any activities related to the education of others. Tutoring, teaching others to read, grading papers, and working in the school library are examples of such activities. If a string describes serving as a regular camp counselor, it should be coded as “Educational.” Counselors at a camp where mentoring or counseling are part of their regular duties should be coded under the broad category “Counseling.”

Examples:

TUTORING STUDENTS WITH MATH, HELPED WITH ADDITION AND SUBTRACTION.

HELPED STUDENTS LOCATE THINGS THEY CANNOT FIND AND HELP THEM IN THE LIBRARY.

STEP GROUP FOR DRUG EDUCATION: EDUCATED ABOUT DRUGS AND THEIR EFFECT AND TRIED TO PREVENT USAGE AMONG MY PEERS.

2. Non-educational School-related

A wide variety of activities that are not directly related to education but take place on school grounds or are related to a school-sponsored event fit into this category. While the location of an activity usually should not factor heavily into how it is coded, we are interested in knowing what percentage of service activities occur on school grounds or are related to school-sponsored events. Therefore, if an activity seems to fit equally well into this category and another, code it as Non-educational School-related. This category does not include teaching activities, even if the teaching is about something nonacademic, such as sports or arts and crafts. Extracurricular activities, such as working on the school yearbook or newspaper, should be coded in this category.

Examples:

SERVING LUNCH TO STUDENTS AND TEACHERS AT MY SCHOOL CAFETERIA.

PLANTED EARTH BOXES WHICH ARE POTTED FLOWERS TO LIVEN UP THE SCHOOL A BIT.

HELPED SET UP THE DECORATIONS THAT WENT IN THE GYM.

3. Care and Companionship

Activities meant to serve those such as small children, the elderly, or persons with disabilities, *who may not be able to do some things for themselves*, should be coded under “Care and Companionship.” Assisting others with day-to-day tasks, visiting with or entertaining the elderly, and reading to children in a day care center are some of the types of activities to be included in this category. When the activity involves assisting someone who is capable of doing the task him- or herself, such as a neighbor, do not code that activity here. Tasks performed in the assistance of able-bodied people should fit under the broad category “Informal,” or under other broad categories if the activity is more formally organized.

Activities in this category must have some component of interpersonal interaction with those being served. In other words, serving meals to residents in a nursing home involves contact with the elderly, and so would be coded as “Care & Companionship.” However, administrative work in the nursing home office or work done to improve the grounds should be coded under “Community Organizations & Businesses/Political” because it does not involve direct contact with those in need.

Examples:

HELPED THE HANDICAPPED BOWL; PUT BALL IN THE RACK AND HELPED PUSH IT DOWN THE LANE.

SANG CHRISTMAS SONGS TO ELDERLY PEOPLE IN NURSING HOME.

WROTE LETTERS TO PEOPLE IN THE MILITARY OVERSEAS.

WE WENT TO VISIT THE CHILDREN AT THE HOSPITAL AND READ STORIES.

I SHOVELED SIDEWALKS FOR ELDERLY PEOPLE.

4. Religious

This category includes activities related to the celebration of religious services, teaching religious material, and fundraising activities organized to benefit a religious organization. Any kind of activity that facilitates religious services goes under this category, including babysitting for those attending services, setting up for services, and assisting the religious leader during the service. Activities or events organized to benefit members of the religious organization also belong under this broad category, for example, delivering Christmas baskets to those who could not attend services. Activities related to religious classes or Sunday school should be included here, not under broad category “Educational,” because coding them here gives us the most specific information about the kind of teaching or class-related activities that was done.

If an activity takes place at a church but is not done to benefit that church or its members, do not code it as “Religious.” For example, if the Little League was holding a tag sale in the church basement to raise money for their team, that would be coded under “Community Organization & Businesses/Political.”

Examples:

I TAUGHT 6- AND 7-YEAR OLDS ABOUT THE BIBLE AND JESUS.

CASHIER AT CHURCH YARD SALE: I HELPED CALCULATE THE MONEY THAT WOULD HELP FUND TRIPS AND RETREATS FOR THE YOUTH.

CHURCH CHOIR: HELPED FACILITATE AND TEACH THE CHILDREN MUSIC AND DISCIPLINE WITH A CHRISTIAN EMPHASIS.

5. Collection and Distribution

This category has to do with three main types of activities. The first is the collection of food, money, clothing, toys, or any other goods. This includes going door-to-door, donating one's own things, or setting up a place for others to donate goods or money. The second type of activity is the preparation of what has been collected, including preparing food, wrapping presents, sorting goods, or otherwise making the donations ready for distribution. The third type of activity is distribution, which includes activities such as delivering clothing to a homeless shelter.

Code activities under this category *only when the string does not indicate who or what benefited* from the money or goods that were collected and distributed. For example, if the string indicates that money was collected for Greenpeace, try to retain that information in the code you assign, which in this case would be "Environmental." If the food drive was organized to collect food for poorer members of a church, code it as "Religious." In other words, only use the broad category of "Collection & Distribution" when there is no information by which you could select another broad category.

If the string indicates that the youth passed gifts out during a party, code that as specific activity "distributing food, clothing, toys, and other goods," broad category "Event-related."

Examples:

I PREPARED VARIOUS FOOD ITEMS SUCH AS SOUP AND SANDWICHES, PUT IN BOXES TO BE DELIVERED.

BROUGHT IN TEN CANS OF FOOD.

6. Environmental

This category includes a wide range of activities that impact upon the youth’s surroundings, in urban, suburban, and rural areas. Recycling and other cleanup activities that *restore* the environment to its natural state fit in this category, as well as work done to *improve* the environment, such as planting trees, painting buildings, and renovating or building new structures. Environmental activities include work done in public areas as well as backyards. However, cleanup activities that take place on school grounds should be coded as “Non-educational School-related.”

Examples:

WE WALKED AROUND AND PICKED UP TRASH ALONG THE SIDE OF THE ROAD.

WE SEPARATED THE NEWSPAPERS FROM THE OFFICE PAPERS.

SWEPT THE FALLEN LEAVES FROM THE PARK.

7. Event-related

This category contains those activities related to finite events, such as parties, dances, community events and fairs. As explained above, if the event takes place at a school, it should be coded as “Non-educational School-related.” However, the location of an event should not otherwise contribute to your coding decisions. In other words, events may take place at a church or on a community organization’s property, but unless the event was held to benefit that church or organization, it should be coded as “Event-related.”

Examples:

RAN STAGE LIGHTING DURING TWO PRODUCTIONS AND THEN HELPED WITH VARIOUS TASKS.

HELP ON MARKET DAY: UNPACK BOXES AND HELP PEOPLE FILL THEIR ORDERS.

8. Counseling

Most activities in which the youth mentored other students, staffed a hotline, or served as a peer counselor should be included in this category. The counseling can be for peers or younger children, such as in a Big Brother or Big Sister program. However, if the string indicates that the youth gave a talk on health-related issues such as drugs, sexually transmitted diseases, nutrition, etc., this sort of activity should be coded as specific activity “mentoring/peer counseling,” broad category “Educational.”

Serving as a camp counselor should not be included in this category unless the camp was specifically organized for children who had special needs and mentoring activities were a large part of the camp counselor’s duties. Regular camp counselors should be coded under broad category “Educational.” Counseling done between friends that is not formally organized should be coded under “Informal.”

Examples:

TALKED WITH 9TH GRADERS ABOUT PEER PRESSURE AND VIOLENCE.

PEER MEDIATION: I HELPED KIDS GET OUT OF THEIR PROBLEMS.

9. Community Organizations & Businesses/Political

Activities done to benefit the local library, community shops, or other businesses or organizations, should be included here. Also, work done on political campaigns or for political causes belongs in this broad category. A wide range of specific activities fits in this category as most work done to assist paid employees helps community organizations or businesses. One common activity that belongs in this category is collection and distribution work done for local homeless shelters or soup kitchens. Such work should be coded here *only if* the youth had significant contact with those running the shelter or soup kitchen. If the string only states that food was collected so that the school or someone else could give it to a shelter, but does not indicate that the youth had any part in that, code it as “Collection & Distribution.”

If a youth is doing clerical work in the front office of a nursing home, it would be coded under broad category “Community Organizations & Businesses/Political.” However, if the work involved direct contact with those in need, the activity should be coded under “Care & Companionship.” Work done at a public library would fit under this category, but work done at a school library should be coded under broad category “Educational.” Work done in the school office should be coded under broad category “Non-educational School-related.”

Examples:

CAMPAIGNING FOR A DEMOCRATIC CANDIDATE: THE WORK CONSISTED OF TELEMARKETING, PHONE BANKING, AND COMPUTER CLERICAL WORK.

WORK AT A SANTA CLAUS SHOP: HELP KIDS SHOP FROM THEIR LIST FOR THEIR PARENTS.

HELPED AT ZOO: HELPED WITH BUILDING AN EXHIBIT AND PUTTING UP SIGNS.

10. Disaster Relief

This category includes activities done in preparation for, during, or recovering from a natural or manmade disaster. Shoveling snow should not be included here unless the string indicates that the shoveling took place during an exceptionally bad snowstorm or blizzard.

Clean-up activities done in the recovery from a storm or other disaster should be coded in this category, not under broad category “Environmental.” Also, if a string indicates that fundraising or other collection activities took place to benefit victims of a disaster, it should be coded in this category, and not under the more general category of “Collection & Distribution.”

Examples:

HELPED CLEAN A RESIDENCE HIT BY A TORNADO.

WENT DOOR TO DOOR TO COLLECT FOOD FOR HURRICANE VICTIMS.

11. Health

This category includes activities that are done to benefit a health-related cause, such as breast cancer or AIDS, or a health organization, such as a pregnancy center or hospital. Many activities done to increase knowledge and awareness of health-related issues, such as passing out pamphlets or posting signs, can be coded here, but actual teaching activities, like giving a talk on drug use or exercise and nutrition, should be coded under “Educational.”

Examples:

HUNG UP RIBBONS AND SPOKE TO PEOPLE TO BE AWARE OF GIVING BLOOD TO BLOOD BANK.

RAISED MONEY FOR CHILDHOOD CANCER; PUT OUT AND PICKED UP CUPS WITH MONEY FROM DIFFERENT CLASSROOMS IN SCHOOL.

12. Informal

This category includes activities related to helping friends, neighbors, or members of the community with a variety of tasks, such as chores, yard work, and home improvement activities. Similar activities that are formally organized and benefit the wider community should not be coded here.

If the youth indicates he/she tutored a friend, code it here, not under “Educational.”

Examples:

CLEANED PERSON’S YARD: RAKED AND BAGGED WEEDS.

HELPING OTHER TO CLEAN HOUSE: CLEAR ALL ITEMS OUT OF TRAILER AND CLEAN IT.

HELPED TUTOR A FRIEND IN PHYSICS.

13. Other

It is not possible to anticipate all categories of service activities, so this category should be used when the activity does not fit into another broad category. Using this category means we lose information about the kinds of things that young people are doing to serve their communities, so use it only when necessary.

Examples:

MOWED LAWNS; HOPPED ON A TRACTOR AND MOWED AND WEED-EATED.

III. STEPS IN CODING SERVICE ACTIVITIES

Assigning codes for service activity descriptive strings involves up to three steps. It is not necessary to take all three steps for every case. The steps are as follows:

1. For each case, carefully read the short string and the long string. Try to picture what the youth was doing in this activity.
2. Using the List of Codes, and based on the Coding Manual, determine the possible specific and broad categories for the service activity. There will be activities for which you are certain only one specific and broad category is appropriate. (As discussed earlier in section II, in some cases more than one specific activity code may be appropriate.) However, you should take a moment to consider alternate ways the string could be coded. Could the string fit under more than one broad category? Are there two specific codes that you are having trouble choosing between? If not, code the string and continue with the next one. If you need to choose between similar or conflicting codes, go to Step 3.
3. Given more than one possible specific or broad code for a particular string, you will need to make a choice that is informed by the rules for ambiguous cases. Read through the rules for ambiguous cases (below) to identify the most appropriate choice, and code the string accordingly. If the rules for ambiguous cases do not help to make a selection, then code the string as “other.” Please note that you should use the “other” category sparingly and only as a last resort.

IV. RULES FOR RESOLVING AMBIGUOUS CASES

General Rules

1) *Conflicts between short and long descriptive strings.*

Always give priority to the information contained in the long string. If the short and long descriptive strings provide information that lead you in different directions, code the case according to the information in the long string.

Example:

Short string: VISITED NURSING HOME.

Long string: SANG SONGS FOR OLD PEOPLE.

In this case, there is no conflict for coding the broad category – it would be coded as “Care and Companionship.” However, there is an apparent conflict between the short and long string for coding the specific activity. That is, the short string sounds like “visiting/talking,” whereas the long string sounds like “singing.” Since the long string provides the more detailed description of the activity, you would choose the code that corresponds with the long string, and so this example would be coded as the specific activity “singing.” Also, if both strings seem to provide the same amount of detail, but there is a conflict in the information provided in the short and long string, code what is in the long string only.

2) *Coding vague or incomplete descriptive strings.*

Most descriptive strings will contain enough information to allow you to make a straightforward judgement about how to code it. However, since the strings describing service activities were provided spontaneously by youth and then transcribed quickly by interviewers, the information contained within them might not always be clear and easy to code. Therefore, the vagueness or incompleteness of the descriptive strings will occasionally present an obstacle to you. In some cases, you may need to “read between the lines,” that is, to figure out what was meant even though it might not be explicitly stated in the string.

Example:

MARCHING BAND: I MARCHED IN A PARADE.

In this example, the coding of the broad and specific categories is difficult, because the string does not contain enough information – was the parade done to raise money for a cause? Was it strictly for entertainment purposes? Without an answer to these questions, it is hard to know whether to code the broad category as “Collection/Distribution” or as “Event-related.” The solution involves reading between the lines. It is most probable that if the activity was done to raise money for a cause, the respondent would have mentioned this, and so, it is more likely that the activity was simply a matter of marching in a parade for entertainment (broad category “Event-related”). Similarly, choosing the specific activity code requires some thought. While it is not explicitly stated, marching in a parade as a member of a band probably involves playing a musical instrument. Therefore, this string should be coded as specific category “playing musical instruments/band.”

3) *Multiple codes for specific activities.*

As discussed earlier, in some descriptive strings there will be more than one specific activity described. In these cases, you will provide a separate code for *each* specific activity. For example, the following string includes two specific activities:

WE SERVED FOOD AT THE HOMELESS SHELTER AND CLEANED UP AFTERWARDS .
 (“preparing or distributing”) (“indoor cleaning”)

In this case, the two specific activities should each be assigned a different code. Consider one more example:

PLAYED THE SAXOPHONE AND TALKED WITH NURSING HOME RESIDENTS.
 (“playing a musical instrument”) (“visiting/talking”)

This string also contains two distinct specific activities (“playing a musical instrument” and “visiting/talking”) and so should be given two separate codes.

For some strings, there may be two or more activities listed, but they may all fall under the same specific activity category:

I PHOTOCOPIED, STAPLED, AND COLLATED FOR A LOCAL BUSINESS.

Since all three of the activities listed in this example fall under the specific activity category “filing, typing, photocopying, other clerical,” this string would only receive one code.

Specific Guidelines: Resolving Ambiguous Cases

For some strings, you will find that it seems possible to assign two or more different codes. In such cases, you will have to determine which code is appropriate. This section will address some of the specific ambiguous cases that you may encounter and will help you to choose between codes for broad and specific categories.

The examples in this manual are not exhaustive, and you are likely to find ambiguous cases that have not been discussed. In general, for both specific and broad category ambiguous cases, there are two decision rules to which you should appeal. The first is the “more specific” rule, which involves selecting the code that retains the most information about the described activity. We are interested in keeping as much information as possible from the strings so that we will have a complete picture of what kinds of service activities youth are participating in.

To take an example, if faced with a choice between “planting flowers, trees” and “yard work,” you should select the former, since planting flowers or trees is more specific than yard work (“planting” is a type of “yard work,” but “yard work” is not a type of “planting”). To take another example, a string such as SERVED MEALS AT THE HOMELESS SHELTER should be coded as “serving meals/snacks,” rather than “administrative duties...,” since this category is more specific and more closely fits the string.

The second decision rule is the “beneficiary” rule, which involves basing your coding decision on the presence or absence of information about who or what benefited from the activity. If the string contains information regarding the beneficiary of the activity, then select the category that more closely incorporates this information. For example, a string such as “COLLECTED MONEY FOR CANCER RESEARCH” could be coded as broad category “Collection & Distribution” or else as “Health.” In this case, you would select “Health,” since the string provides information about the beneficiaries (people with cancer).

Ambiguities Related to Specific Activity Categories

a. yard work vs. planting flowers, trees

Although there may be some commonality between these two activities (both take place outside, are messy, and may involve digging), if a string mentions planting, it should be coded as “planting flowers, trees,” since this is more specific than “yard work.”

b. setting-up/decorating vs. assisting at a party

It is possible that assisting at a party might involve setting-up or decorating. Code strings that describe setting-up or decorating for a party as “setting-up/decorating,” since this is more specific than “assisting at a party.”

c. babysitting vs. assisting at a day care center

Both of these activities involve supervising and caring for children. Choose “assisting at a day care center” when the string includes mention of a day care center or nursery, since this is more specific than “babysitting.” Otherwise, code the string as “babysitting.”

d. writing/calling vs. mentoring/staffing a hotline

While both these activities might involve talking on a telephone, you would code the string as “mentoring/staffing a hotline” if the purpose of talking on the phone was to help callers to solve some urgent problem. If the purpose of talking on the phone was to give advice or counsel, code the string as “mentoring/staffing a hotline.” If the purpose of the call was for something other than to give advice, code the string as “writing/calling.”

- e. *filing, typing, photocopying, other clerical vs. taking inventory/stocking shelves vs. shelving books, other library*

Since one might take inventory or do certain clerical work within a library, some strings might be ambiguous between these three specific categories. To resolve this, you should appeal to the “more specific” rule – if the string describes an activity that occurs within a library, code the string as “shelving books, other library.” Otherwise, if the string describes taking inventory or stocking shelves (and does not take place in a library), code it as “taking inventory/stocking shelves.” If the activity is clerical and does not involve taking inventory and does not take place in a library, code the string as “filing, typing, photocopying, other clerical.”

- f. *serving meals/snacks vs. distributing food, clothing...*

In cases where a string could be coded as “distributing food, clothing...” or “serving meals/snacks,” follow the “more specific” rule, so that for example, a string such as SERVED MEALS AT THE HOMELESS SHELTER should be coded as “serving meals/snacks,” since this category more closely fits the string.

- g. *administrative duties... vs. project organization vs. recruiting*

In cases where a string could be coded as “administrative duties...” or “project organization,” follow the “more specific” rule. For example, a string such as COMMITTEE TO PLAN THINGS: ORGANIZE SPIRIT WEEK AT SCHOOL should be coded as “project organization,” because this category provides more specific information about the activity than the more general category of “administrative duties...” In cases where a string could be coded as “administrative duties...” or “recruiting,” follow the “more specific” rule, so that for instance, a string such as TRIED TO GET PEOPLE TO VOLUNTEER TO GIVE BLOOD should be coded as “recruiting,” because this category provides more specific information about the activity. The difference between “recruiting” and “project organization” seems to be straightforward in most cases, but where there may be some overlap or ambiguity, follow the “more specific” rule. So, for example, a string such as I WAS IN CHARGE OF RECRUITING VOLUNTEERS TO SELL CANDY FOR MY CHURCH, should be coded as “recruiting,” since this captures more specific information about the activity than “project organization.”

Ambiguities Related to Broad Activity Categories

a. Educational vs. Non-educational School-related

Both of these categories can contain activities that take place at a school, but they differ in that “Educational” refers to “thinking” activities that are intellectual or meant to teach an academic skill and “Non-educational School-related” includes activities at a school that are not “thinking” activities, such as cleaning, decorating, recycling, etc.

For example, a string that says, “HELPED THE TEACHER CLEAN THE CAFETERIA AND RECYCLE NEWSPAPERS” tells us that the activities were not intellectual ones, so it should be coded as “Non-educational School-related” and not as “Educational.”

Many of the activities that go under “Non-educational School-related” may seem to fit under other broad categories. Using the same example as above, “HELPED THE TEACHER CLEAN THE CAFETERIA AND RECYCLE NEWSPAPERS,” we can see that recycling activities also may fit under “Environmental.” However, because the recycling took place at a school, we want to code it as “Non-educational School-related.”

b. Non-educational School-related vs. Event-related

Activities associated with finite events like dances or fairs, such as setting up, decorating, taking tickets, directing parking, etc., should be coded as “Non-educational School-related” if the event took place at a school.

c. Environmental vs. Disaster Relief

Activities that involve routine clean-up of the environment should be considered “Environmental.” The same types of activities belong under “Disaster Relief” when they are related to an unusual occurrence, such as a flood, tornado, or bombing.

d. *Community Organizations and Businesses/Political vs. Care and Companionship*

If a youth is doing clerical work in the front office of a nursing home, it would be coded under broad category “Community Organizations & Businesses.” However, work done at a nursing home that includes contact with the elderly or disabled should be coded under broad category “Care & Companionship.”

e. *Care & Companionship vs. Educational*

“Care & Companionship” activities can include assisting the elderly, disabled, or small children with health-related tasks, such as with eating, changing clothes, personal hygiene, etc. Activities should be coded under “Educational” when they are related to teaching others about health-related issues. Raising money for health causes, such as cancer, or working for a health organization, such as a hospital, goes under “Health.”

g. *Counseling vs. Health*

If the activity includes counseling others on physical health-related issues, such as drug use, nutrition, or exercise, it should be coded under “Health.” Counseling others about mental health issues such as suicide, rape, and conflict resolution should be coded under “Counseling.”

h. *Counseling vs. Informal*

When the string indicates that the youth was giving advice to friends or relatives, code this as “Informal.” Activities that relate to more formal types of counseling, such as staffing a hotline or serving as a Big Brother, belong under “Counseling.”

i. *Religious vs. Collection & Distribution*

If the string indicates that fundraising was done in order to benefit a church, synagogue, or other religious organization, code it under “Religious.” Activities should only be coded as “Religious” when they are organized to benefit the religious organization itself or members of the religious community.

j. *Collection & Distribution vs. Event-related*

Code the distribution of gifts, clothing, food, or other materials as “Event-related” when it is specified that the distribution took place during a party or similar event. For example, “GATHERED BLANKETS AND FOOD FOR THE HUMANE SOCIETY” would belong under “Community Organizations & Businesses/Political” because there is no indication the activity took place in conjunction with a specific event. “GAVE OUT PRESENTS AND SANG CHRISTMAS SONGS AT THE SHELTER” would belong under “Event-related” because the distribution occurred during a specific event, in this case, a Christmas party at a shelter.
