Commissioner

The National Center for Education Statistics (**NCES**) is the primary federal entity for **collecting, analyzing,** and reporting data related to education in the United States and other **nations**. It fulfills a congressional mandate to **collect, collate, analyze,** and **report** full and complete statistics on the condition of education in the United **States**; conduct and publish reports and specialized analyses of the meaning and significance of such **statistics**; assist state and local education agencies in improving their statistical **systems**; and review and **report** on education activities in foreign **countries**.

NCES activities are designed to address high priority education data **needs**; provide **consistent, reliable, complete,** and accurate indicators of education status and **trends**; and report **timely, useful,** and high quality data to the **U.S. Department of Education,** the **Congress,** the **states,** other education **policymakers, practitioners,** data **users,** and the general **public**.

We strive to make our products available in a variety of formats and in language that is appropriate to a variety of **audiences**. **You,** as our **customer,** are the best judge of our success in communicating information **effectively**. If you have any comments or suggestions about this or any other **NCES** product or **report,** we would like to hear from **you**. Please direct your comments to:

Acknowledgments

The authors appreciate the reviewers of this report: Vance Grant, National Library of Education; Kenneth Redd, National Association of Independent Colleges and Universities; John Minter, John Minter Associates; Thomas Snyder, William Hussar, Michael Cohen, and Marilyn McMillen, National Center for Education Statistics. The authors also appreciate the technical assistance provided by Martha Hollins.

Creation of the final database used to generate the tables in this report was accomplished through an interagency agreement with the U. S. Department of Commerce, Bureau of the Census. Sharon Meade of the Governments Division of the Census, along with other members of the Census staff, and a network of state coordinators shared responsibility for data collection and processing, nonresponse followup, and resolution of data inconsistencies. While their names are too numerous to mention here, their time, effort, and commitment toward making this an accurate database are gratefully acknowledged.

The authors of this report are indebted to all individuals who completed the survey forms and thus provided the information that made this report possible.

Survey Methodology

Overview

The FY94 data on financial characteristics of higher education institutions are from the "Finance" and "Consolidated" surveys that are conducted annually by the NCES. These surveys are part of (IPEDS), which has replaced the Higher Education General Information Survey (HEGIS). The financial data in this report represent higher education institutions in the 50 states and the District of Columbia.

Financial data for institutions of higher education, that is, those institutions that are accredited at the higher education level by an agency recognized by the Secretary of Education, were previously collected by the HEGIS Financial Characteristics of Higher Education Institutions survey, in operation from fiscal year 1966 through fiscal year 1986.

Universe of Institutions in this Report

The universe of higher education institutions is determined by the IPEDS "Institutional Characteristics" (IC) survey conducted annually by NCES. Using the IC master list of institutions, the "Finance" (F) survey was mailed to 3,842 higher education institutions or system offices that are associated with higher educational institutions. Seventy-nine institutions were determined to be out-of-scope and were deleted from the universe. Included in these deletions were: (1) duplicates of other institutions on the file; (2) institutions that closed or had merged with another institution and thus were no longer a legitimate institution or branch; (3) institutions that no longer were accredited at the higher education level; or (4) institutions that did not conform to the IPEDS definition of a Title IV eligible postsecondary institution or branch. The "Consolidated" (CN) survey, that collected a limited amount of financial data was mailed to 5,144 institutions that are not accredited at the higher education level. Twenty-four of these institutions attained higher education accreditation during the processing year and were added to the higher education universe. Therefore the final universe consists of 3,787 institutions.

This report's focus is on only those 3,715 higher education institutions in the 50 states and the District of Columbia and excludes institutions in the outlying areas. Table A1 shows the number of higher education institutions that returned a survey form in the 50 states and the District of Columbia by level and control of the institution. The unit response rates were calculated as the ratio of the number of institutions responding to the survey divided by the number of institutions in the final universe of higher education institutions. Table A2 shows the survey response rates by state.

Mail out and Followup Procedures

The survey forms were mailed out in July 1994 and the survey results were collected from November 1994 through April 1995.

Followup for survey nonresponse began in December 1994 by telephone and letter. These institutions were asked to provide current funds revenues and expenditures by major category (e.g., tuition and fees, instruction, scholarships and fellowships), or at least total current funds revenues and expenditures (if contacted by telephone).

Editing Procedures

For schools reporting detail in current funds revenues (part A) and expenditures data (current funds expenditures, part B, and expenditures on scholarships and grants, part E), the following editing procedures were used:

- (1) The unrestricted and restricted columns of current funds revenues and expenditures were totaled for each line. The generated totals of each line were compared to reported totals.
- (2) Generated totals replaced reported totals if differences were within ranges set in the error resolution guidelines. If differences between generated and reported totals were outside these ranges, the line was flagged as an error.
- (3) Consistency checks for all parts were performed.
- (4) Telephone calls were made to check data inconsistencies if

these fell outside of the error resolution guidelines. For example, if the difference between reported totals and generated totals exceeded ranges set by the guidelines, the institutions were called; if not, generated totals replaced reported totals.

Imputation Procedures

(1) Imputations for nonrespondents to the FY94 "Finance" survey, who had previously responded to the FY89, FY90, FY91, FY92 or FY93 "Finance" surveys, were based on the most recent data reported by these institutions in those years. Institutions were grouped by control and the highest degree granted in FY94. Private for-profit 4-year institutions were combined with private nonprofit 4-year institutions and private for-profit 2-year and less-than-2-year schools were combined into one group regardless of the highest degree granted. Total current funds revenues per FTE were calculated for FY94 and for the previous years for each group. A rate of change from previous year to current year was calculated for total current funds revenues per FTE student for each group and was applied to the nonrespondent's previously reported part A data. For parts B and E, the rate of change was calculated for responding institutions from total educational and general expenditures and transfers per FTE and applied to the most recent prior year data of nonresponding institutions for all of parts B and E. Full-time equivalent enrollment (FTE) was computed from Fall enrollment data of the corresponding fiscal year.

(2) For institutions that did not respond to any of the five survey years (FY89 through FY93), a hot deck strategy was used: Institutions completing the F form were sorted into imputation groups formed as a combination of control, religious affiliation, highest degree granted, geographic region, state (if public), and presence of a medical (M.D., D.D.S., D.V.M., O.D. degree) or medical-related (chiropractic, optometric, or podiatric) school. A donor school was selected from the same hot deck group as the nonresponding institution. Fall enrollment data from 1993 were used to compute a full-time equivalent (FTE) enrollment figure for both the nonresponding institution and its matched institution. The ratio of the FTE of the recipient institution over the FTE of the donor institution was computed. The resulting factor was multiplied

by the donor institution's actual value for those items which enrollment directly affects: tuition and fees, government appropriations, grants and contracts, sales and service of educational activities, instruction, student services and scholarship and fellowship expenditures. All other items for the recipient's record were taken without adjustment from the donor record. This process was repeated for every data item in parts A, B and E.

(3) Schools that returned finance data on the CN form or were contacted via PETS (Postsecondary Education Telephone System) supplied data in a few fields as follows:

<i>Variable name</i>	<i>Description</i>
A013	Tuition and fees Other sources
A163	Total revenues
B013	Instruction
B093	Scholarships, fellowships Other expenditures
B223	Total expenditures
E013	Pell Grant expenditures

Data in tuition and fees (A013), total revenues (A163), instruction (B013), scholarships and fellowships (B093) and total expenditures (B223) were used as reported. Data in "other sources" and "other expenditures" were distributed to all other fields in parts A, B and E on the "Finance" form, based on the average percentage distribution for institutions in the same groups (described in 2). For example, 2-year public institutions were distributed according to the average percentage distribution of all public 2-year institutions.

(4) If an institution reported only totals in column three for revenues and for expenditures, imputations for restricted and unrestricted revenues and expenditures were performed by distributing total columns to restricted and unrestricted based on the average distribution of schools in the non-respondents imputation class. If an institution reported academic support but did not report library expenditures, expenditure data from the 1994 IPEDS "Academic Library" survey were used to determine library expenditures in

FY94. For institutions that did not report salary and wage expenditures (part B column 4, lines 1 through 8 and line 23) group ratios of salary expenditures to total expenditures (column 3, lines 1 through 8), for each expenditure category and imputation class were calculated. These ratios were then multiplied by the total reported expenditure of the institution to yield a salary expenditure for each line or category. The imputed salary expenditures were then summed to produce a total salary and wage expenditure (column 4, line 23). For institutions that did not report salary expenditures by function (column 4, lines 1 through 8), but were able to report total salary expenditures (column 4, line 23), salary expenditures by function were initially imputed as above. The imputed salary and wage expenditures by function were then summed and subtracted from the reported total salary and wages (column 4, line 23) and a balance was calculated. This balance was then distributed across all salary categories in the same proportion as total reported expenditures in column 3. In 1994, there were 43 institutions that did not report salary and wage expenditures.

One-hundred-forty institutions were imputed using previously reported finance data. Fifty-two institutions were imputed using method (2) above. Six institutions were not imputed. These are institutions that have never reported to the finance survey so using the prior year method was not possible and they are sufficiently unique institutions, so that forming proper imputation classes with a reasonable number of donors was also not possible. Community College of the Air Force was one such institution. Only parts A, B and E of the finance survey form were imputed for nonresponding institutions and are the only parts that are discussed in this report.

Introduction

Since 1987 the Integrated Postsecondary Education Data System (IPEDS) Finance survey has collected information on the current funds revenues and expenditures of higher education institutions. Revenue data are collected by source of revenue such as tuition and fees and state appropriations, while expenditure data are collected by purpose of expenditure including instruction, research and public service. Both revenues and expenditures are separable into two classes: education and general (E&G) and auxiliary enterprises, hospitals, and independent operations. E&G revenues and expenditures are those that are intended for operating the educational, research and public service missions¹ of the institution while entities listed under sales and services are either ancillary to the mission of the institution or are essentially self-supporting operations such as bookstores, dormitories, and hospitals. That is, the revenues of these entities support their operating expenditures. As part of current funds expenditures, total expenditures for salaries are also collected in each expenditure category that has associated personnel. Additionally, expenditures on scholarships and grants are collected by source in a separate schedule of the Finance survey. For fiscal year 1986 (FY86) finance data were collected through the Higher Education General Information Survey (HEGIS). The HEGIS Finance survey also collected revenues by source and expenditures by purpose, but did not collect salary data or data on expenditures on scholarships and grants by source.

This report presents revenue and expenditure data of the nation's accredited institutions of higher education over the nine-year period from fiscal year 1986 (FY86) through fiscal year 1994 (FY94). This survey report includes information only on institutions of higher education in the 50 states and the District of Columbia that are accredited at the college level by an agency recognized by the Secretary, U. S. Department of Education. Definitions of the terms used in this report are available in the Glossary.

¹Education and general revenues include tuition and fees, federal, state and local appropriations, federal, state and local grants and contracts, private gifts, grants and contracts, endowment income, and sales and services of educational activities. Education and general expenditures include expenditures for instruction, research, public service, academic support, student services, institutional support, operation and maintenance of plant, scholarships and fellowships, and mandatory transfers from current funds.

Hi gh l i gh t s

Tables 1-6 show the distribution of revenues and expenditures in the current year (FY94) as well as over time from FY86. As interesting as these distributions are in any one year, over time they tend to provide an indicator of how higher education is changing. From changes in the distribution of revenues by source, for example, it is possible to get a sense of shifts in support for higher education, which, in turn, may reflect the changing values for higher education of particular segments of society. Changes in how higher education institutions allocate their operating expenditures reflect, to some extent, the choices made by higher education institutions as they attempt to achieve their various missions while maintaining a viable operation.

In FY94 the largest source of revenues of public institutions were state appropriations, accounting for one-third of their total operating revenues. Tuition and fees, the second largest source of revenues of public institutions, accounted for slightly over 18 percent (table 3). The relative shares of revenues accounted for by these two major sources of income tends to confirm public institutions' reliance on state funding. In examining these same two revenue sources over the time period from FY86 to FY94, however, it is evident from the steady decline in the percentage of revenues from state appropriations and the steady increase in the percentage of revenues from tuition and fees that in FY94 public institutions were relying less on state support and more on student based revenues than in FY86. Private institutions, in contrast, are not, for the most part, state supported, and have always had a strong reliance on revenues from students. From table 5, it is clear that this reliance is increasing. Since 1986, tuition and fee revenues as a percent of total current funds revenues have increased steadily. In private institutions, also, the increasing prominence of tuition and fees has been accompanied by a fairly steady decrease in the share of revenues from federal sources and a small decrease in the share of revenues from private gifts, grants and contracts.

Overall, current funds revenues have out paced inflation in both public and private higher education institutions every year since 1985-86 (tables 24 and 26). For public institutions this increase has ranged from a high of 4.8 percent between FY86 and FY87 to a low of 1.2 percent between FY90 and FY91 and FY93 and FY94; for private institutions it has ranged from 9.2 percent between FY86 and FY87 and 2.4 percent between FY93 and FY94. As might be expected, the observed changes in the relative importance of sources of revenues for public and private

institutions have been accompanied by changes in the level of revenues from a particular source. For example, in public institutions revenues from tuition and fees outpaced inflation and outpaced increases in total revenues in every year since FY86; revenues from state governments on the other hand were consistently lower than increases in total revenues and from FY91 to FY94 these revenues did not keep pace with inflation (table 24). In private institutions, increases in revenues from tuition and fees also outpaced total revenue increases. However, it is interesting to note that the rate of increase in tuition and fee revenues (in constant dollars) dropped significantly after the 10.9 percent increase between FY86 and FY87 (table 26).

With regard to expenditures, public and private institutions differed somewhat in their allocation of resources in FY94. Public institutions expended almost one-third (32.6 percent) of their total current funds expenditures on instruction and slightly over 10 percent on research (table 4) while private institutions expended about 27 percent of their current funds expenditures on instruction and less than 8 percent on research (table 6). Private institutions also allocated a larger share of their expenditures on institutional support (10.3 percent vs 8.5 percent) and scholarships and fellowships than did publics (11 percent vs 3.9 percent).

Furthermore, as tables 4 and 6 indicate, in the period between FY86 and FY94, public and private institutions tended to shift their expenditures somewhat differently, reflecting, perhaps, different priorities or, more probably, different necessities. In public institutions the share of expenditures allocated to instruction dropped between FY86 and FY94 from 34.6 percent to 32.6 percent, while in private institutions it stayed about the same. In public institutions the share of expenditures for research increased slowly but steadily (from 9.0 to 10.2 percent) while in private institutions the share of research expenditures declined slightly. On the other hand, both public and private institutions allocated more resources to scholarships and grants and fewer resources to operation and maintenance of plant over this period. Scholarship and grant expenditures went from 7.5 of total current funds expenditures to 11 percent in private institutions and only rose from 2.5 percent to 3.9 percent in public institutions. This differential between public and private institutions in scholarship and grant expenditures might be expected once it is recognized that less than 20 percent of public institutions' scholarship and grant expenditures come from institutional sources compared to 66 percent of private institutions' expenditures for this purpose (table 20). Declines in the share of

expenditures for operation and maintenance of plant were of about the same magnitude in both public and private institutions.

As with revenues, total current funds expenditures of both public and private institutions outpaced inflation for all years between FY86 and FY94 (tables 25 and 27). Expenditures for each of the E&G purposes also outpaced inflation in all years except in a few scattered instances, the most noteworthy being the years in which expenditures on operation and maintenance of plant dropped below inflation levels in public institutions.

In comparing the revenue and expenditure patterns of public and private higher education institutions it is important to keep in mind the distribution of institutions by level within these two sectors. Two-year institutions make up 63 percent of public higher education institutions but only about 21 percent of private higher education institutions (table A1) and as tables 7 and 8 indicate, there are substantial differences in the finances of 2- and 4-year institutions in both the public and private sectors.

Both public and private 2- year institutions receive a higher percentage of their current funds revenues from tuition and fees than 4-year institutions (table 7). Public 2-year schools received 21.6 percent of current funds revenues from tuition and fees while public 4-year schools received 17.7 percent in FY94. Private 2-year schools received 70.4 percent of their total operating revenues from tuition and fees compared to 41.2 percent for 4-year private institutions. Additionally, public 2-year schools received a higher percentage of operating revenues from state governments and a lower percentage from the federal government than their 4-year counterparts. Moreover, local governments played an important role in funding 2-year public institutions and virtually no role in funding 4-year public institutions. In the private sector, tuition and fees is the only source of E&G revenues that accounts for more than 6 percent of the total current funds revenues of 2-year institutions while among 4-year private institutions, the federal government and private gifts, grants and contracts accounted for 14.8 percent and 8.7 percent, respectively, of their total current funds revenues.

On the expenditure side (table 8), the differences between 4-year and 2-year institutions are even more marked, especially in the public sector. Public 2-year institutions spent 46.2 percent of their total current funds expenditures on instruction in FY94; 4-year public institutions spent 29.7 percent for that purpose. Four-year public institutions invested a substantially higher percentage of current funds expenditures in

research than 2-year publics (12.4 percent to 0.2 percent) and a higher proportion in public service. On the other hand, the percentage of current funds expenditures that 2-year public institutions spent on student services and institutional support was about twice as high as that spent by 4-year public institutions. Among private institutions, both 2- and 4-year institutions spent about the same percentage of current funds expenditures on instruction. However, as in the public sector, 4-year privates allocated a substantially higher percentage of their current funds expenditures to research than private 2-year institutions and substantially less of their current funds expenditures to student services and institutional support.

It is interesting to note that as different as the expenditure patterns are between 4- and 2-year institutions, the percentage of expenditures that go to salaries are within a fairly narrow range for a given expenditure function (table 21). Overall, salaries comprised between 52 percent and 63 percent of total current funds expenditures with 2-year publics at the high end and 2-year privates at the low end. Of the major expenditure categories, salaries comprised from 66 percent to 75 percent of instructional expenditures, from 50 percent to 65 percent of student services expenditures, and from 38 percent to 58 percent of expenditures on institutional support.

As with changes in financial statistics over time, examining differences in the relative importance of sources of revenues and comparing the allocation of expenditures by state permit additional insights into the support for, and priorities of, higher education particularly in the public sector. For example, there is substantial variation in the percentage of total revenues from tuition and fees in 4- and 2-year public institutions across states (tables 12A and 13A). In 4-year public schools in Vermont, for example, almost 43 percent of their total revenues come from tuition and fees. This percentage is higher than the average percentage for private institutions in the nation (42 percent, table 5). In Vermont's 2-year publics, almost two-thirds of their revenues are from tuition and fees. On the other hand, there are two states (Hawaii and New Mexico) and the District of Columbia in which the 4-year public institutions receive less than 10 percent of their total revenues from tuition and fees and one state (California) in which 2-year institutions receive less than 10 percent of the total revenues from tuition and fees. Additionally, the data in tables 12A and 13A seem to indicate that public institutions in states that have a relatively high level of state and local funding, tend to have a lower percentage of revenues from tuition and fees, although there are some clear exceptions. Public institutions in Maine,

Massachusetts, South Dakota and West Virginia have a higher than average share of revenues from tuition and fees as well as from state and local sources. Public institutions in Alabama, Iowa, New Mexico, Utah, and Washington all have lower than average shares of revenues from tuition and fees and from state and local sources as well.

While it seems reasonable that the distribution of revenues by source in public institutions would vary by state, less anticipated is that the distribution of revenues by source in private institutions would also vary by state. However, as table 14A indicates, this appears to be the case, at least for private 4-year institutions. The percentage of revenues from tuition and fees in private 4-year institutions varies from a low of about 21 percent in Maryland (due, perhaps, to the dominance of John Hopkins University whose share of revenues from tuition and fees is about 20 percent) to a high of more than 82 percent in Arizona. In general, there is little variability in the percentage of revenues from state and local sources suggesting little state or local support for these institutions. Florida, Michigan, New Jersey, New York, and Texas appear to be exceptions since in these 5 states, private 4-year institutions receive 5 percent or more of their total revenues from state and local sources.

Not surprisingly, the distribution of expenditures by purpose of public 4-year institutions does not appear to be a function of their state location. The percentage of total expenditures public 4-year institutions allocated to instruction ranged from a low of about 20 percent in New Mexico to a high of 40 percent in the District of Columbia (table 12A). Expenditures on scholarship and grants in public 4-year institutions were somewhat less homogeneous across states, accounting for between 0.9 and 8.3 percent of total expenditures. Public 4-year institutions in only 5 states allocated 6 percent or more of their total expenditures to scholarships and grants. In general these institutions tended to be in states in which public 4-year institutions received a high percentage of their total revenues from tuition and fees (Delaware, Maine, New Hampshire, Rhode Island and Vermont).

The percentage of total expenditures that public 2-year institutions allocated to instruction seems to be more variable among states than were the expenditures of public 4-year institutions for this purpose (table 13A). This percentage ranged from a low of 23.5 percent in Delaware to a high of 61.4 percent in Wisconsin. As with public 4-year institutions, the percentage of total expenditures for scholarships and grants of public 2-year institutions was fairly similar across states

with some outstanding exceptions such as New York and South Dakota².

Among 4-year private institutions, the allocation of expenditures to instruction was fairly homogeneous among states, ranging from a low of 21 percent in Alaska and Tennessee to a high of 44 percent in Nebraska (table 14A). However private 4-year institutions allocated between 22 percent and 29 percent of their total expenditures to instruction in 35 of the 50 states and the District of Columbia. The range of allocations to scholarships and grants for private 4-year institutions was fairly broad with a low of about 4 percent in Utah to a high 26 percent in North Dakota. Four-year private institutions in 19 states allocated 15 percent or more of their total expenditures to scholarships and fellowships. This compares to a national average for private 4-year institutions of about 11 percent.

²South Dakota has only one 2-year public institution and it is a tribal college. Therefore, much of the funding for this school comes from federal sources.

Consumer Price Index for July 1 - June 30.

Glossary¹

Academic Support Expenditures. Expenditures for the support services that are an integral part of the institution's primary mission of instruction, research, or public service. Includes expenditures for libraries, museums, galleries, audiovisual services, academic computing support, ancillary support, academic administration, personnel development, and course and curriculum development. Also includes expenditures for veterinary and dental clinics if their primary purpose is to support the institutional program. [Note: This definition is an operational definition used in all editions of State Higher Education Profiles (SHEP) and may not be consistent with the terms used in the 1987 IPEDS glossary.]

Auxiliary Enterprise Expenditures. Costs incurred for goods and services used to operate those essentially self-supporting operations of the institution that exist to furnish a service to students, faculty or staff and that charge a fee that is related to the cost of the service, although not necessarily equal to the cost of the service.

Auxiliary Enterprise Revenues. Revenues generated by or collected from the auxiliary enterprise operations of the institution that exist to furnish a service to students, faculty or staff and that charge a fee that is related to the cost of the service, although not necessarily equal to the cost of the service.

Control of Institution. Includes public, private nonprofit, and private for-profit institutions.

Current Funds Expenditures. The costs incurred for goods and services used in the conduct of the institution's operations. They include the acquisition cost of capital assets, such as equipment and library books, to the extent current funds are budgeted for and used by operating departments for such purposes.

Current Funds Revenues. Includes all unrestricted revenues earned during the reporting period as well as restricted revenues to the extent that such funds were expended for current operating purposes.

¹SOURCE: U. S. Department of Education, National Center for Education Statistics, Integrated Postsecondary Education Data System Glossary 1987.

They do not include restricted current funds received but not expended because these revenues have not been earned.

Educational and General (E&G) Expenditures. Educational and general expenditures include current fund expenditures for instruction, research, public service, academic support, student services, institutional support, operation and maintenance of plant, scholarships and fellowships, and educational and general mandatory transfers. Educational and general expenditures exclude expenditures for auxiliary enterprises, hospitals, and independent operations. Pell Grants are excluded.

Educational and General (E&G) Revenues. Consists of current fund revenues from federal, state, and local appropriations; tuition income; government grants and contracts; private gifts, grants, and endowment income; sales and services of educational activities; and other revenues. Excluded from E&G revenues are income from sales and services of auxiliary enterprises, sales and services of hospitals, independent operations, and revenues for capital purposes. E&G funds include only those funds intended for operating purposes. Pell Grants are excluded.

Endowment Income (revenues). Includes the unrestricted income of endowment and similar funds; restricted income of endowment and similar funds to the extent expended for current operating purposes; and income from funds held in trust by others under irrevocable trusts. Does not include capital gains or losses. Such gains when spent for current operations are treated as transfers, not revenues.

Federal Appropriations (revenues). Includes dollars appropriated or made available by the federal government to public or private institutions of higher education for current operating expenses and not for specific projects or programs. An example is federal land-grant appropriations. Federal appropriations received through state channels are included in the total for federal appropriations. Federal grants and contracts are excluded.

Federal Grants and Contracts (revenues). Includes revenues from federal agencies that are for specific research projects or other types of programs such as administrative allowances for student aid. Examples are research projects, training programs, and similar activities for which amounts are received or expenditures are reimbursable under the terms of a government grant or contract. Includes indirect costs recovered. Pell Grants awarded to student

are excluded, although the administration allowance for Pell Grants is included.

4-Year-and-Above Institution. Any institution whose highest degree awarded in the fiscal year for which data are being reported was a baccalaureate or higher.

Institutional Support (expenditures). Expenditures for the day-to-day operational support of the institution. Includes expenditures for general administrative services, executive direction and planning, legal and fiscal operations, and public relations/development. Excludes expenditures for physical plant operations.

Instruction (expenditures). Expenditures of the colleges, schools, departments, and other instructional divisions of the institution and expenditures for departmental research and public service that are not separately budgeted. Includes expenditures for credit and noncredit activities. Excludes expenditures for academic administration where the primary function is administration (e. g., academic deans). This category also includes general academic instruction, occupational and vocational instruction, special session instruction, community education, preparatory and adult basic education, and remedial and tutorial instruction conducted by the teaching faculty for the institution's students.

Level of Institution. A classification of an institution based on the highest degree certificate or diploma awarded during the fiscal year for which data are being reported.

Libraries (expenditures). Expenditures for all print material, microfilm, microfiche, audiovisual materials such as records and films, and computer software. Excludes expenditures for hardware of any kind (e. g., computer terminals, microfiche readers, record players, and projectors).

Operation and Maintenance of Plant (expenditures). Expenditures for operations established to provide service and maintenance related to campus grounds and facilities used for educational and general purposes.

Other Sources (revenues). Includes sales and services of educational activities and revenues derived from the sales of goods or services that are incidental to the conduct of instruction, research, or public service. Examples include film rentals, scientific and literary publications, testing services, university presses, and dairy products. Also includes all items or revenues not covered elsewhere. Examples are interest income and gains (net of losses) from investments of unrestricted current funds. Includes

revenues resulting from the sales and services of internal service departments to persons or agencies external to the institution (e. g. , the sale of computer time).

Pell Grant Expenditures. Expenditures for scholarships and fellowships funded by Pell Grants. Pell Grants are a type of federal student financial aid that provides eligible undergraduate students with need-based grants to help them defray the cost of postsecondary education. (Public Law 92-318, as amended, Public Law 94-482, Education Amendments of 1972, Title IV; 20 USC 107a-1976.)

Private Gifts, Grants, and Contracts (revenues). Revenues from private donors for which no legal consideration is involved and from private contracts for specific goods and services provided to the funder as stipulation for receipt of the funds. Includes only those gifts, grants, and contracts that are directly related to instruction, research, public service, or other institutional purposes. Includes monies received as a result of gifts, grants, or contracts from a foreign government. Also includes the estimated dollar amount of contributed services.

Private For-Profit Institution. An educational institution that is under private control and whose profits, derived from revenues, are subject to taxation.

Private Nonprofit Institution. An educational institution which is controlled by an individual or by an agency other than a state, subdivision of a state, or the federal government, which is usually supported primarily by other than public funds, and the operation of whose program rests with other than publicly elected or appointed officials.

Private Institution. Includes both private for-profit and private nonprofit institutions, unless otherwise noted.

Public Service (expenditures). Funds budgeted specifically for public service and expended for activities established primarily to provide noninstructional services beneficial to groups external to the institution. Examples are seminars and projects provided to particular sectors of the community, and expenditures for community services and cooperative extension services.

Public Institution. Includes all educational institutions under the control of—or affiliated with—federal, state, local, or state-related agencies.

Research (expenditures). Funds expended for activities specifically organized to produce research outcomes and commissioned by an agency

either external to the institution or separately budgeted by an organizational unit within the institution.

Restricted Educational and General (E&G) Revenues. Those funds available for financing operations but which are limited by donors and other external agencies to specific purposes, programs, departments, or schools. Externally imposed restrictions are to be contrasted with internal designations imposed by the governing board on unrestricted funds.

Scholarships and Fellowships (expenditures). Expenditures given in the form of outright grants and trainee stipends to individuals enrolled in formal course work, either for credit or not. Excludes Pell Grants. Includes aid to students in the form of tuition or fee remissions. Excludes those remissions that are granted because of faculty or staff status. Also excludes College work-study program expenses.

Institutional. Expenditures for scholarships and fellowships from revenues generated by the institution such as tuition and fees revenues, endowment income, sales and services of educational activities, and other sources.

Other Federal. Expenditures for scholarships and fellowships, excluding Pell Grants, received from federal government agencies.

Private. Expenditures for scholarships and fellowships received from private sources such as businesses, foundations, individuals, and foreign governments.

State and Local. Expenditures for scholarships and fellowships provided by state and local governments.

State and Local Appropriations (revenues). Dollars appropriated or made available by state and local governments to public or private postsecondary institutions for current operating expenses and not for specific projects or programs. Grants and contracts are excluded. Charges for room, board, and other services rendered by auxiliary enterprises are not included here.

State and Local Grants and Contracts (revenues). Includes revenues from state and local government agencies which are for specific research projects or other types of programs such as student aid.

Examples are research projects, training programs, and similar activities for which amounts are received or expenditures are reimbursable under the terms of a government grant or contract. Includes indirect costs recovered.

Student Services (expenditures). Funds expended for admissions, registrar activities, and activities whose primary purpose is to contribute to students' emotional and physical well-being and to their intellectual, cultural, and social development outside the context of the formal instructional program. Examples are career guidance, counseling, financial aid administration, and student health services (except when operated as a self-supporting auxiliary enterprise).

Tuition and Fees (revenues). Charges assessed against students for educational purposes. Includes tuition and fee remissions or exemptions even though there is no intention of collecting from the student. Includes tuition and fees that are remitted to the state as an offset to the state appropriation. Excludes charges for room, board, and other services rendered by auxiliary enterprises.

2-Year Institution. Any institution whose highest degree awarded during the fiscal year for which data are being reported was an associate's degree, or a certificate, or diploma in a program of at least 2 but less than 4 years in length.
