NHANES 2005–2006 Data Documentation

Questionnaire Section: Medical Conditions (MCQ_D)

First Published: November 2007   **Last Revised:** N/A

Component Description

The medical conditions section (prefix MCQ) provides self-reported personal interview data on a broad range of health conditions for both children and adults. Many questions in the NHANES 2005-2006 MCQ section are also contained in previous NHANES surveys, allowing researchers to monitor health trends over time. The NHANES MCQ questionnaire segment is generally modeled on the "Medical Conditions" questionnaire section of the U.S. National Health Interview Survey. In accordance with the Department of Health and Human Services' Survey Integration Plan, a number of questions on health conditions are identical to those used in the redesigned National Health Interview Survey adult and child core sections that started in 1997.

Major Topics in the MCQ Section

Health Conditions / Medical History:

Asthma, Childhood and Adult	Emphysema
Anemia	Heart Attack (Myocardial Infarction)
Angina (Angina Pectoris)	Liver Disease
Arthritis	Menses Onset
Blood Transfusions	Overweight
Cancer (Multiple varieties)	Stroke
Chronic Bronchitis	Thyroid problems
Congestive Heart Failure	Vision
Coronary Heart Disease	

Family History of Disease:

Asthma
Diabetes
Heart Attack/Angina
Prostate Cancer

Questions Regarding Twelve Month Period Prevalence of Disablement:

Respondent Missed School Because of Illness or Injury (Children)

Respondent Missed Job Because of Illness or Injury (Adults)

Eligible Sample

The target samples for questions in this section vary by age and gender. Please review the questionnaire and codebook carefully. Frequency counts were verified during the preparation of the file.

Interview Setting and Mode of Administration

These questions were asked before the physical examination, in the home, using the Computer-Assisted Personal Interviewing-CAPI (interviewer administered) system.

The survey questionnaire can be found at the NHANES website.

Quality Assurance & Quality Control

The CAPI system is programmed with built-in consistency checks to reduce data entry errors. CAPI also uses online help screens to assist interviewers in defining key terms used in the questionnaire.

Data Processing and Editing

The data were reviewed and edited for completeness, consistency, and illogical values.

Analytic Notes

A number of additional questions occur in MCQ that are logically related to other questionnaire sections or exam segments. Analysts should refer to these other NHANES sections as part of any data analysis.

Please refer to the Analytic Guidelines for further details on the use of sample weights and other analytic issues. The Analytic Guidelines are available on the NHANES website.

Questions Supplementing Other NHANES Components:

Condition:	Relates to:
Blood Transfusion History -	LAB (HIV, Hepatitis Serology, Liver Enzymes)
Menses Onset < Age 12 Years -	RHQ
Overweight, Physician Told -	WHQ
Trouble Seeing with Current Vision Correction -	VIQ & LAB (Visual Acuity Testing)

Changes Since 2003-2004:

2003-2004	2005-2006
