

2004 Summary Statistics

The Total Number of Foodborne Disease Outbreaks by Etiology

<i>Etiology</i>	<i>No. Outbreaks</i>	<i>No. Cases</i>
Bacterial	208	5,269
Chemical	47	153
Parasitic	8	230
Viral	251	9,994
Multiple	5	726
Total Confirmed Etiology	519	16,372
Unknown Etiology	800	11,867
Total	1,319	28,239

Foodborne disease outbreaks are reported to the Centers for Disease Control and Prevention, Foodborne and Diarrheal Diseases Branch each year by state, local and territorial health departments. A foodborne disease outbreak (FBDO) is defined as the occurrence of two or more cases of a similar illness resulting from the ingestion of a common food.

Reported FBDOs are listed by year and etiology type. Within each etiology category, outbreaks are sorted by confirmed etiology (met the criteria specified in the guidelines for confirmation of foodborne-disease outbreak

http://www.cdc.gov/foodborneoutbreaks/guide_fd.htm), the state in which the exposure took place and by month of first onset. Variables in the line listing include confirmed etiology, state where the exposure took place, month of first onset, vehicle, location of food consumption and a comment field. Vehicle(s) identified are not necessarily confirmed with statistical or epidemiological evidence; all vehicles identified by the reporting agency are listed in the line listing. Outbreaks in which an etiology was suspected (not confirmed) are listed in the Etiology Unknown section and the suspected etiology is identified in the comment field. Outbreaks in which multiple etiologies were confirmed are listed under Multiple Etiologies.
