The Energy Biosciences program has the mission of generating knowledge about plants and non-medical microorganisms that provides scientific foundations for future energy related biotechnologies. Areas of interest include bioenergetic systems, including photosynthesis; control of plant growth and development, including metabolic, genetic and hormonal regulation, metabolic diversity, ion uptake, transport and accumulation; genetic transmission and expression; plant-microbial interactions; plant cell wall structure and function; lignocellulose degradative mechanisms; anaerobic metabolism, energetics and membrane phenomena; microbial interactions; and one-carbon metabolism, which is the basis of biotransformations such as methanogenesis. The program also encourages fundamental biological research that interfaces with traditional disciplines in the physical and earth sciences. The objective is to discern and understand basic mechanisms and principles.

Program Funding

It is anticipated that approximately \$2,000,000 will be available for grant awards during FY 2003, contingent upon the availability of appropriated funds. Multiple year funding of grant
