### *Cooperation of the U.S. Bureau of the Census*

Under the legislation establishing the National Health Survey, the Public Health Service is authorized to use, insofar as possible, the services or facilities of other Federal, State, or private agencies.

In accordance with specifications established by the National Center for Health Statistics, the U.S. Bureau of the Census, under a contractual arrangement, participated in planning the surveys and collecting the data for the National Hospital Discharge Survey.

## Detailed Tables

### Demographic Tables

1. Number and rate of discharges from short-stay hospitals and of days of care, with average length of stay, by age: United States, selected years, 1970–98 .....	7
2. Number, percent distribution, and rate of discharges from short-stay hospitals and of days of care, with average length of stay, by sex and age: United States, 1998 .....	8
3. Number and rate of discharges from short-stay hospitals and days of care, with average length of stay, by sex, age, and geographic region: United States, 1998.....	9
4. Number and rate of deaths for discharges from short-stay hospitals by sex and age: United States, 1998 .....	11

### Diagnosis Tables

5. Number and rate of discharges from short-stay hospitals and of days of care, with average length of stay, by selected first-listed diagnostic categories: United States, 1998.....	11
6. Number and rate of discharges from short-stay hospitals with average length of stay, for patients 65 years of age and over by age and selected first-listed diagnostic categories: United States, 1998 .....	12
7. Number of discharges from short-stay hospitals by age and first-listed diagnosis: United States, 1998 .....	14
8. Rate of discharges from short-stay hospitals by age and first-listed diagnosis: United States, 1998.....	15
9. Average length of stay for discharges from short-stay hospitals by age and first-listed diagnosis: United States, 1998 ..	16
10. Number of discharges from short-stay hospitals by sex and first-listed diagnosis: United States, 1998 .....	17
11. Rate of discharges from short-stay hospitals by sex and first-listed diagnosis: United States, 1998.....	18
12. Average length of stay for discharges from short-stay hospitals by sex and first-listed diagnosis: United States, 1998 ..	19
13. Number of discharges from short-stay hospitals by geographic region and first-listed diagnosis: United States, 1998 ..	20
14. Rate of discharges from short-stay hospitals by geographic region and first-listed diagnosis: United States, 1998.....	21

15.	Average length of stay for discharges from short-stay hospitals by geographic region and first-listed diagnosis: United States, 1998.....	22
16.	Number of all-listed diagnoses for discharges from short-stay hospitals by age and diagnosis: United States, 1998 .....	23
17.	Number of all-listed diagnoses for discharges from short-stay hospitals by sex and diagnosis: United States, 1998.....	24
18.	Number of all-listed diagnoses for discharges from short-stay hospitals by geographic region and diagnosis: United States, 1998.....	25
19.	Number and rate of discharges from short-stay hospitals with human immunodeficiency virus diagnoses by selected characteristics: United States, 1990–98.....	26
20.	Number and rate of deaths for discharges from short-stay hospitals by age and selected first-listed diagnoses: United States, 1998.....	27

## **Procedure Tables**

21.	Number of discharges from short-stay hospitals with and without procedures and percent with procedures by selected characteristics: United States, 1998.....	27
22.	Number and rate of all-listed surgical and non surgical procedures for discharges from short-stay hospitals, by selected procedure categories: United States, 1998.....	28
23.	Number and rate of all-listed surgical and nonsurgical procedures for patients 65 years of age and over discharged from short-stay hospitals, by age and selected procedure categories: United States, 1998 .....	29
24.	Number and rate of discharges from short-stay hospitals with a coronary artery procedure and number and rate of procedures by sex, age, and region: United States, 1998.....	30
25.	Number of all-listed procedures for discharges from short-stay hospitals by age and procedure category: United States, 1998.....	31
26.	Rate of all-listed procedures for discharges from short-stay hospitals by age and procedure category: United States, 1998.....	32
27.	Number of all-listed procedures for discharges from short-stay hospitals by sex and procedure category: United States, 1998.....	33
28.	Rate of all-listed procedures for discharges from short-stay hospitals by sex and procedure category: United States, 1998.....	34
29.	Number of all-listed procedures for discharges from short-stay hospitals by geographic region and procedure category: United States, 1998.....	35
30.	Rate of all-listed procedures for discharges from short-stay hospitals by geographic region and procedure category: United States, 1998.....	36

## **Tables on Deliveries and Newborn Infants**

31.	Number, percent distribution, and rate of discharges and days of care, with average length of stay for females with deliveries discharged from short-stay hospitals, by type of delivery, age, and region: United States, 1998 .....	37
32.	Number and percent distribution of females with deliveries discharged from short-stay hospitals by length of stay and type of delivery: United States, selected years 1980–98 .....	38
33.	Number and rate of selected obstetrical procedures for females with deliveries discharged from short-stay hospitals: United States, selected years 1980–98.....	39
34.	Number and rate of females with deliveries discharged from short-stay hospitals by type of delivery: United States, selected years 1980–98.....	40
35.	Number and rate of females with deliveries discharged from short-stay hospitals by type of delivery, age, and region: United States, 1998.....	40
36.	Number, percent distribution, and average length of stay for newborn infants discharged from short-stay hospitals by sex, geographic region, and health status: United States, 1998 .....	41
37.	Number and percent distribution of newborn infants discharged from short-stay hospitals by length of stay, and average length of stay by health status: United States, selected years 1980–98.....	41
38.	Number of all-listed diagnoses for sick newborn infants discharged from short-stay hospitals by sex and selected diagnostic categories: United States, 1998 .....	42

## Abstract

### Objectives

This report presents 1998 national estimates and selected trend data on the use of non-Federal short-stay hospitals in the United States. Estimates are provided by demographic characteristics of patients discharged, geographic region of hospitals, conditions diagnosed, and surgical and nonsurgical procedures performed. Measurements of hospital use include number and rate of discharges and days of care, and the average length of stay. Estimates of first-listed diagnoses, days of care, all-listed diagnoses, and all-listed procedures are presented according to their code number in the *International Classification of Diseases, 9th Revision, Clinical Modification (ICD-9-CM)*.

### Methods

The estimates are based on data collected through the National Hospital Discharge Survey. The survey has been conducted annually by the National Center for Health Statistics since 1965. In 1998, data were collected for approximately 307,000 discharges. Of the 495 eligible non-Federal short-stay hospitals in the sample, 478 (97 percent) responded to the survey.

### Results

An estimated 31.8 million inpatients were discharged from non-Federal short-stay hospitals in 1998. These patients used an estimated 160.9 million days of care. Patients 65 years of age and over accounted for 39 percent of discharges and used 48 percent of days of care. Heart disease and deliveries made up 26 percent of first-listed diagnoses. One or more procedures were reported for 63 percent of discharges. The cesarean rate per 100 deliveries increased from 20.8 in 1995 to 22.5 in 1998. An estimated 3.8 million newborn infants were discharged from short-stay hospitals after average stays of 3.2 days.

**Keywords:** hospitalization • inpatient • diagnoses • procedures

# National Hospital Discharge Survey: Annual Summary, 1998

by Jennifer R. Popovic, M.A. and Lola Jean Kozak, Ph.D., Division of Health Care Statistics

## Highlights

### Patient Characteristics

- During 1998, an estimated 31.8 million inpatients were discharged from non-Federal short-stay hospitals. These patients used an estimated 160.9 million days of care.
- Patients 65 years of age and over comprised 12 percent of the population in 1998, but they accounted for 39 percent of discharges and used 48 percent of days of care ([figure 1](#)).
- In 1970, average lengths of stay ranged from 4.7 days (under 15 years) to 12.6 days (65 years and over). In 1998, the range was from 3.7 days (15 to 44 years) to 6.2 (65 years and over) ([figure 2](#)).
- Deaths accounted for 3 percent of discharges.

### Diagnoses

- Heart disease accounted for 4.3 million discharges, and deliveries included 4.0 million discharges. Together they made up 26 percent of first-listed diagnoses.
- Heart disease was the most common diagnosis among inpatients 65 years of age and over, accounting for 23 percent of their discharges.

- Patients with first-listed diagnoses of heart disease accounted for 21 percent of deaths in short-stay hospitals. First-listed malignant neoplasm diagnoses made up 13 percent of short-stay hospital deaths.

### Procedures

- One or more procedures were reported for 63 percent of discharges.
- Three surgical procedures performed 1 million times or more were episiotomy, cardiac catheterization, and repair of current obstetric laceration.
- Three nonsurgical procedures performed 1 million times or more were arteriography and angiography using contrast material, diagnostic ultrasound, and respiratory therapy.
- Men had substantially higher rates of discharges with coronary artery procedures than women did ([figure 3](#)).

### Deliveries

- The number of episiotomies per 100 vaginal deliveries dropped from 64.0 in 1980 to 39.3 in 1998.
- The cesarean rate per 100 deliveries increased from 20.8 in 1995 to 22.5 in 1998 ([figure 4](#)). Repeat cesarean

NOTE: This report was prepared in the Division of Health Care Statistics. Rong Cai of the OAO Corporation did the computer programming for the report and produced the estimated parameters for relative standard error equations. Maria Owings of the Hospital Care Statistics Branch produced standard errors for selected procedures. Suzanne Moien of the Hospital Care Statistics Branch helped to verify the data tables. The report was edited by Klaudia M. Cox and typeset by Annette F. Holman of the Publications Branch, Division of Data Services.

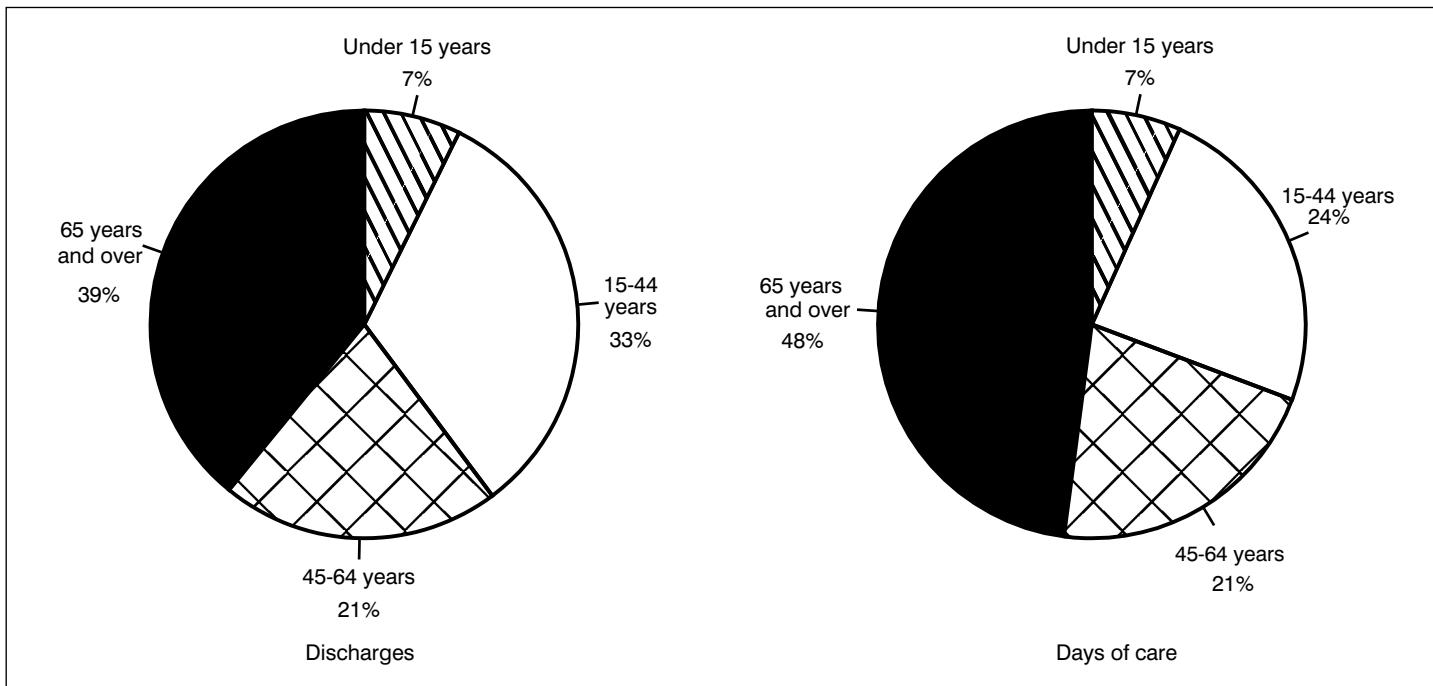

Figure 1. Percent distribution of discharges and days of care by age: United States, 1998

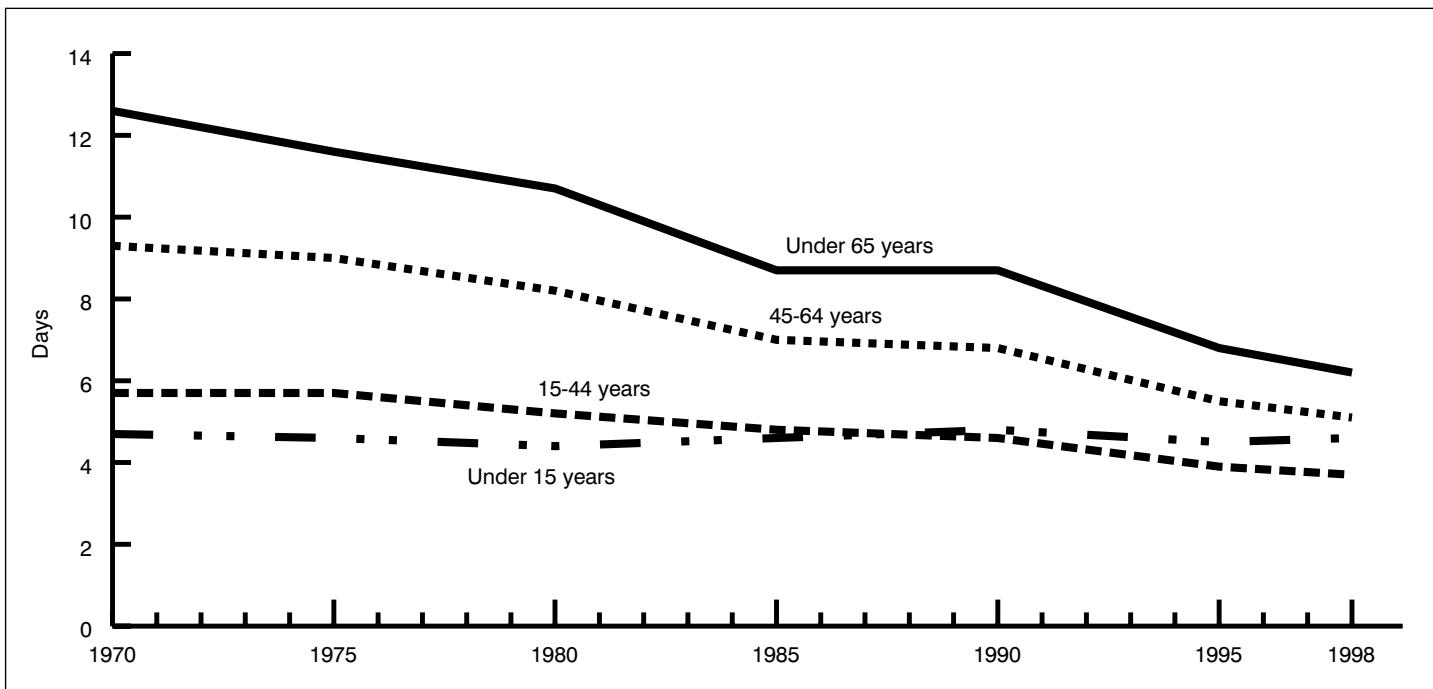

Figure 2. Average length of stay in days by age: United States, 1970–98

deliveries per 100 cesarean deliveries increased from 33.9 in 1995 to 39.4 in 1998.

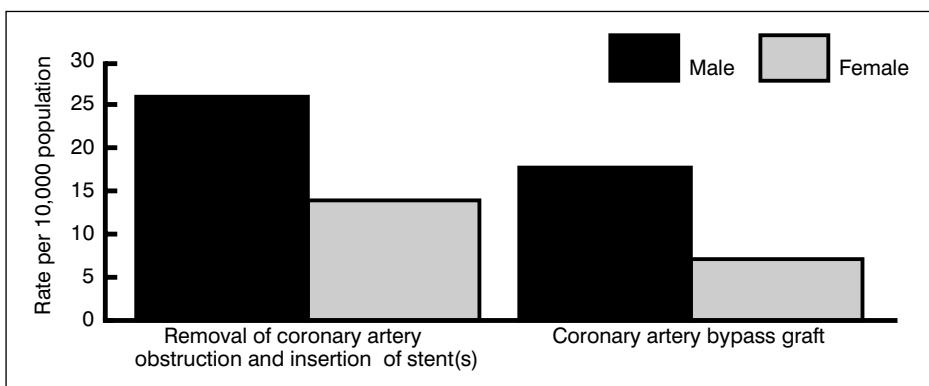

## Newborn Infants

- An estimated 3.8 million newborn infants were discharged from short-stay hospitals after average stays of 3.2 days.

- More than half the diagnoses of sick newborn infants were hemolytic disease of fetus or newborn, respiratory distress syndrome and other respiratory conditions, disorders relating to short gestation and unspecified low birthweight, or congenital anomalies.

## Introduction

This report presents data from the 1998 National Hospital Discharge Survey (NHDS). The survey has been conducted continuously by the National Center for Health Statistics (NCHS) since 1965. NCHS

**Figure 3. Rate of discharges with coronary artery procedures by sex: United States, 1998**

publishes national estimates of hospital use derived from NHDS for each calendar year. This report provides a summary of the 1998 data, including estimates of diagnoses and procedures by *International Classification of Diseases, 9th Revision, Clinical Modification* (ICD-9-CM) code number (1). In previous years, the tables by ICD-9-CM code were published in a separate report (2).

NHDS is the principal source for national data on the characteristics of patients discharged from non-Federal short-stay hospitals. Data from NHDS are used to examine important topics in public health (3–7) and for a variety of planning, administrative, and evaluation activities by governmental, scientific, academic, and commercial institutions.

Estimates of the number of diagnoses and procedures shown in this report are for hospital inpatients only. Data on ambulatory medical care services are collected in other NCHS surveys. The National Ambulatory Medical Care Survey obtains information on patients' visits to physicians' offices (8). The National Hospital Ambulatory Medical Care Survey collects data on visits to hospital outpatient and emergency departments (9,10). Data on ambulatory surgery performed in hospitals and in freestanding ambulatory surgery centers were collected by the National Survey of Ambulatory Surgery from 1994–96 (11).

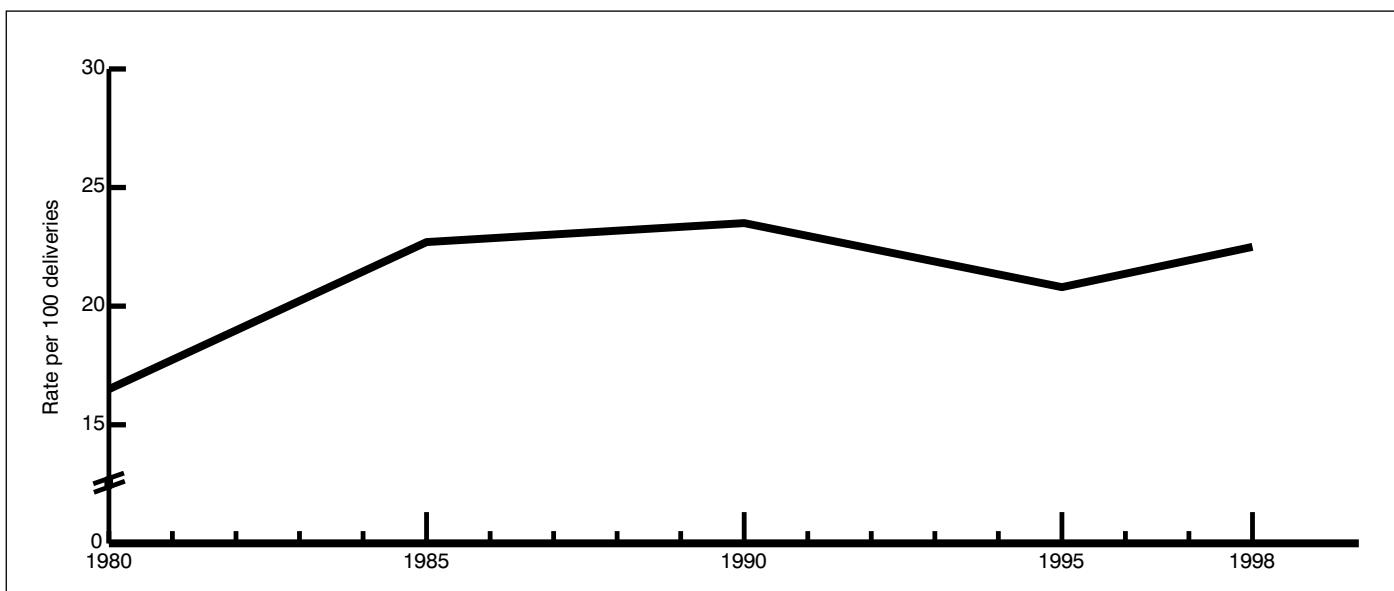

## Methods

---

### Data Source

NHDS data are collected from a sample of inpatient records acquired from a national probability sample of hospitals. Because persons with multiple discharges during the year can be sampled more than once, NHDS produces estimates for discharges, not persons. Only hospitals with an average length of stay of fewer than 30 days for all patients, general hospitals, or children's general hospitals are included in the survey. Federal, military, and Department of Veterans Affairs hospitals, as well as hospital units of institutions (such as prison hospitals), and hospitals with fewer than six beds staffed for patient use, are excluded. Beginning in 1988, the sampling frame for hospitals has been the SMG Hospital Market Database (12). The 1988 sample was updated in 1991, 1994, and 1997 to allow the inclusion of hospitals that opened or changed their eligibility status since the previous sample update.

NHDS originally used a two-stage design, but it was redesigned in 1988. The latter design implemented a stratified three-stage design (13). Both

**Figure 4. Rate of cesarean deliveries: United States, 1980–98**

the original and the redesigned samples include the largest hospitals with certainty and sample noncertainty hospitals. The first stage of the current three-stage design consists of the selection of 112 primary sampling units (PSU's) that comprise a probability sample of PSU's used in the 1985–94 National Health Interview Survey (14). The second stage consists of the selection of noncertainty hospitals from the sample PSU's. At the third stage, a systematic random sample of discharges within hospitals is selected.

For 1998, the sample consisted of 513 hospitals, 18 of which were out of scope (ineligible) because they had gone out of business or otherwise failed to meet the criteria for the NHDS universe. Of the 495 in-scope (eligible) hospitals, 478 (97 percent) responded to the survey. Data were collected for approximately 307,000 discharges from the 478 responding hospitals.

Two data collection procedures are used for the survey. One is a manual system in which sample selection and transcription of information from the hospital records to abstract forms are performed by the hospital's staff or by staff of the U.S. Bureau of the Census on behalf of NCHS. Completed forms are sent to NCHS for data coding, editing, and estimation.

The other data collection procedure is an automated system in which NCHS purchases tapes containing machine-readable medical record data from commercial organizations, State data systems, hospitals, or hospital associations. Records from these tapes are systematically sampled by NCHS. In 1998, approximately 41 percent of respondent hospitals provided data through the automated system.

The medical abstract form is shown as [figure I](#) in the appendix. This form and the automated data tapes contain items relating to the personal characteristics of the patient. These items include birth date (or age), sex, race, ethnicity, marital status, ZIP code, and expected sources of payment. Administrative items such as admission and discharge dates, discharge status, and medical record number are also included. The medical information about

patients include diagnoses, surgical and nonsurgical procedures, and dates of surgery. The medical record number, date of birth, and ZIP code are confidential information that are not available to the public. Medical data are coded according to the *International Classification of Diseases, 9th Revision, Clinical Modification* (ICD-9-CM) (1).

For the manual data collection, an ongoing quality control program is undertaken on the coding and entering of data from abstracts to machine-readable form. Approximately 10 percent of the abstracts are independently recoded by an NHDS coder, with discrepancies resolved by the chief coder. The overall error rate for records manually coded by NCHS for the 1998 data year was 1.3 percent for medical (ICD-9-CM) coding and data entry and 0.2 percent for demographic coding and data entry.

## Estimation

Because they are sample data, the survey data must be inflated or weighted to produce national estimates. The estimation procedure produces essentially unbiased national estimates and has three basic components:

- (a) inflation by reciprocals of the probabilities of sample selection,
- (b) adjustment for nonresponse, and
- (c) population weighting ratio adjustments.

These three components of the final weight are described in more detail in an earlier report (15). Information about the standard errors of statistics for the 1998 NHDS is in the appendix of this report.

## Use of Tables

Estimates of hospital use by age and sex of discharged patients and geographic region of hospitals are shown in [tables 1–3](#), and fatality rates are shown in [table 4](#). Diagnostic data are included in [tables 5–20](#), and information about procedures is found in [tables 21–30](#). [Tables 31–38](#) present data on women with deliveries and newborn

infants. Estimates of diagnoses, procedures, and days of care by diagnosis are shown by ICD-9-CM code in [tables 39–42](#). [Figures 1–4](#) illustrate selected highlights from the tables. Definitions of terms used in these tables are presented in the appendix.

The diagnostic data in [tables 7–18](#) and procedure data in [tables 25–30](#) are presented by chapter of the ICD-9-CM. Within these chapters, subcategories of diagnoses or procedures are shown. These specific categories are selected because of their large estimates or because they were of special interest. Although diagnoses-assigned ICD-9-CM codes E800–E999 (supplementary classification of external causes of injury and poisoning) are included in the NHDS, these diagnoses are not well reported in the survey and therefore are excluded from this report. A detailed discussion of injury diagnoses and E-codes has been published (16).

[Table 24](#) shows data for coronary artery bypass graft (CABG) surgery and removal of coronary artery obstruction and insertion of stent(s). These procedures are often assigned more than one code for a single operation. Coronary artery bypass graft (CABG) surgery frequently is assigned multiple codes to indicate the number and type of bypasses. Beginning with the 1996 NHDS data, patients could have a separate code for insertion of stent(s) along with a code for removal of coronary artery obstruction. As shown in [table 24](#), the number of these procedures greatly exceeds the number of inpatients who had one or more of the procedures.

[Tables 4](#) and [20](#) show rates of death per 100 discharges. In contrast, mortality rates are ratios of deaths to the population. Mortality rates include deaths that occur outside of hospitals and are for the underlying cause of death, which might not be the same as the first-listed diagnosis for a patient discharged dead. Mortality rates are published regularly by NCHS in *National Vital Statistics Reports* (17) and in *Vital Statistics of the United States* (18).

Data for newborn infants are included only in tables 36–38. Because estimates of newborn infants are based on a sample and because they did not include out-of-hospital births, these estimates may not agree with the data on births published in *National Vital Statistics Reports* (19) and *Vital Statistics of the United States* (20), which are based on a complete count of births.

Tables 39–41 provide information by three-digit, four-digit, and five-digit ICD-9-CM diagnostic codes. Table 42 shows two-, three-, and four-digit procedure codes. Only ICD-9-CM code numbers appear in tables 39–42. Specific titles and more detailed information about the coding system can be found in appropriate volumes of the ICD-9-CM (1). A specific diagnosis or procedure code appears in tables 39, 41, and 42 if the estimate of the total for the code is 5,000 or more. The codes that appear in table 40 for days of care are identical to those in table 39 for first-listed diagnoses.

Estimates in all tables are rounded to the nearest thousand. Totals may include data for categories that are not shown individually in the tables. For these reasons, figures within tables do not always add to the totals. Rates, percents, and average lengths of stay are calculated from unrounded figures and may not precisely agree with measures calculated from rounded data.

Because of low reliability, estimates in tables 1–38 with relative standard errors of more than 30 percent or that are based on fewer than 30 records are not presented; only an asterisk (\*) appears in the tables. Estimates based on fewer than 60 records are preceded by an asterisk (\*) to indicate that they also have low reliability.

Only an asterisk is shown in tables 39, 41, and 42 if the estimate of diagnosis or procedure is less than 5,000, and only an asterisk is shown in table 40 for estimates of days of care derived from fewer than 5,000 estimated discharges. These estimates generally have a relative standard error of more than 30 percent or a sample size of less than 30. Estimates of diagnoses and procedures of less than 9,000 are

preceded by an asterisk because they are generally based on fewer than 60 records. Days of care estimates in table 40 that are derived from fewer than 9,000 estimated discharges are also preceded by an asterisk.

The population estimates used to compute rates are shown in table I. These estimates are adjusted for the 1990 Census underenumeration. Populations used to compute rates in reports of 1990–96 NHDS data were not adjusted for the underenumeration.

Hysterectomy . . . . .	68.3–68.7,68.9	645	645
Obstetrical procedures . . . . .	72–75	6,640	...
Episiotomy with or without forceps or vacuum extraction . . . . .	72.1,72.21,72.31,72.71,73.6	1,220	1,220
Artificial rupture of membranes . . . . .	73.0	815	815
Cesarean section . . . . .	74.0–74.2,74.4,74.99	900	900
Repair of current obstetric laceration . . . . .	75.5–75.6	1,093	1,093
Operations on the musculoskeletal system . . . . .	76–84	3,257	1,552
Partial excision of bone . . . . .	76.2–76.3,77.6–77.8	260	130
Reduction of fracture . . . . .	76.7,79.0–79.3	610	282
Open reduction of fracture with internal fixation . . . . .	79.3	416	177
Excision or destruction of intervertebral disc . . . . .	80.5	312	163
Total hip replacement . . . . .	81.51	160	68
Total knee replacement . . . . .	81.54	266	99
Operations on the integumentary system . . . . .	85–86	1,325	577
Debridement of wound, infection, or burn . . . . .	86.22,86.28	335	195
Miscellaneous diagnostic and therapeutic procedures . . . . .	87–99	12,977	6,261
Computerized axial tomography . . . . .	87.03,87.41,87.71,88.01,88.38	986	462
Arteriography and angiography using contrast material . . . . .	88.4–88.5	1,961	1,115
Diagnostic ultrasound . . . . .	88.7	1,123	488
Respiratory therapy . . . . .	93.9,96.7	1,109	564
Insertion of endotracheal tube . . . . .	96.04	399	200
Injection or infusion of cancer chemotherapeutic substance . . . . .	99.25	254	121

... Category not applicable.

<sup>1</sup>See table 24 for comparison of number of procedures with number of discharges with procedures.

**Table 28. Rate of all-listed procedures for discharges from short-stay hospitals by sex and procedure category: United States, 1998**

[Discharges of inpatients from non-Federal hospitals. Excludes newborn infants. Procedure groupings and code numbers are based on the *International Classification of Diseases, 9th Revision, Clinical Modification (ICD-9-CM)*]

Procedure category and ICD-9-CM code	Both sexes	Male	Female
Rate per 10,000 population			
All procedures . . . . .	1,519.4	1,213.6	1,811.5
Operations on the nervous system . . . . .	01–05	38.9	36.4
Spinal tap . . . . .	03.31	11.8	11.8
Operations on the endocrine system . . . . .	06–07	3.5	2.4
Operations on the eye . . . . .	08–16	4.5	5.0
Operations on the ear . . . . .	18–20	2.1	2.6
Operations on the nose, mouth, and pharynx . . . . .	21–29	10.5	12.1
Operations on the respiratory system . . . . .	30–34	36.7	40.8
Bronchoscopy with or without biopsy . . . . .	33.21–33.24,33.27	9.7	10.9
Operations on the cardiovascular system . . . . .	35–39	212.0	252.2
Removal of coronary artery obstruction and insertion of stent(s) <sup>1</sup> . . . . .	36.0	33.9	44.5
Coronary artery bypass graft <sup>1</sup> . . . . .	36.1	20.3	29.7
Cardiac catheterization . . . . .	37.21–37.23	44.0	53.7
Insertion, replacement, removal, and revision of pacemaker leads or device . . . . .	37.7–37.8	13.3	13.4
Hemodialysis . . . . .	39.95	15.5	16.4
Operations on the hemic and lymphatic system . . . . .	40–41	12.2	12.5
Operations on the digestive system . . . . .	42–54	187.3	163.3
Endoscopy of small intestine with or without biopsy . . . . .	45.11–45.14,45.16	32.7	31.0
Endoscopy of large intestine with or without biopsy . . . . .	45.21–45.25	19.4	16.1
Partial excision of large intestine . . . . .	45.7	8.9	8.4
Appendectomy, excluding incidental . . . . .	47.0	10.2	11.7
Cholecystectomy . . . . .	51.2	16.1	9.6
Lysis of peritoneal adhesions . . . . .	54.5	11.3	4.4
Operations on the urinary system . . . . .	55–59	34.6	35.2
Cystoscopy with or without biopsy . . . . .	57.31–57.33	7.1	9.1
Operations on the male genital organs . . . . .	60–64	10.9	22.3
Prostatectomy . . . . .	60.2–60.6	7.4	15.2
Operations on the female genital organs . . . . .	65–71	80.1	...
Oophorectomy and salpingo-oophorectomy . . . . .	65.3–65.6	18.0	35.2
Bilateral destruction or occlusion of fallopian tubes . . . . .	66.2–66.3	13.3	26.1
Hysterectomy . . . . .	68.3–68.7,68.9	23.6	46.2
Obstetrical procedures . . . . .	72–75	243.1	...
Episiotomy with or without forceps or vacuum extraction . . . . .	72.1,72.21,72.31,72.71,73.6	44.7	87.3
Artificial rupture of membranes . . . . .	73.0	29.8	58.3
Cesarean section . . . . .	74.0–74.2,74.4,74.99	32.9	64.4
Repair of current obstetric laceration . . . . .	75.5–75.6	40.0	78.2
Operations on the musculoskeletal system . . . . .	76–84	119.3	116.3
Partial excision of bone . . . . .	76.2–76.3,77.6–77.8	9.5	9.3
Reduction of fracture . . . . .	76.7,79.0–79.3	22.3	23.5
Open reduction of fracture with internal fixation . . . . .	79.3	15.2	17.1
Excision or destruction of intervertebral disc . . . . .	80.5	11.4	12.2
Total hip replacement . . . . .	81.51	5.9	5.1
Total knee replacement . . . . .	81.54	9.7	7.4
Operations on the integumentary system . . . . .	85–86	48.5	43.3
Debridement of wound, infection, or burn . . . . .	86.22,86.28	12.3	14.6
Miscellaneous diagnostic and therapeutic procedures . . . . .	87–99	475.1	469.4
Computerized axial tomography . . . . .	87.03,87.41,87.71,88.01,88.38	36.1	34.7

## Technical Notes

### Abstract Form

[Figure I](#) shows the medical abstract form used for the 1998 NHDS. The hospital number, medical record number, date of birth, and patient ZIP code are confidential information and are not released to the public.

### Population Estimates

Population estimates used to compute rates are shown in [table I](#). These estimates are for the U.S. civilian population, including institutionalized persons, as of July 1, 1998. They were provided by the U.S. Bureau of the Census and are consistent with population estimates in Population Division Release US-98-SIS-7 (U.S. *Population Estimates by Age, Sex, Race and Hispanic Origin: 1998*). These estimates have been adjusted for the net underenumeration using the 1990 National Population Adjustment Matrix. This is a change from population data provided in reports of 1990–96 NHDS data, which were not adjusted for the underenumeration.

### Reliability of Estimates

The statistics presented in this report are based on sample surveys, and therefore may differ from the figures that would be obtained if a complete census had been taken. The standard error is primarily a measure of sampling variability that occurs by chance because only a sample rather than an entire universe is surveyed. Standard errors for the estimates from NHDS were calculated with SUDAAN software, which takes into account the complex sample designs. A description of the software and the approach it uses has been published (21).

The chances are about 32 in 100 that an estimate from the samples would differ from a complete census by more than the standard error. The chances are 5 in 100 that the difference would be more than twice the standard error. The

chances are about 1 in 100 that the difference would be more than 2.5 times as large as the standard error. The relative standard error (RSE) expresses the standard error as a percent of the estimate and can be multiplied by the estimate to obtain the standard error.

To derive approximate standard errors for the estimates in this report, first calculate the approximate RSE of the estimate using the parameters shown in [table II](#). Then multiply the approximate RSE by the estimate. The approximate RSE of an estimate  $X$ , may be estimated from the formula:

$$\text{RSE}(X) = \sqrt{a + b/X}$$

where  $a$  and  $b$  are defined in [table II](#). When multiplied by 100, RSE(X) is expressed as a percent of  $X$ .

The approximate RSE for a percent  $p$  in which the numerator is a subclass of the denominator may be calculated directly using the formula:

$$\text{RSE}(p) = \sqrt{b(1-p) / (pX)}$$

where 100  $p$  is the percent of interest,  $X$  is the denominator of the percent, and  $b$  is the parameter  $b$  in the formula for approximating the RSE(X). The values for  $b$  are given in [table II](#). When multiplied by 100, RSE(p) is expressed as a percent of  $p$ . This approximation is valid if the RSE of the denominator is less than 5 percent or the RSE's of the numerator and denominator are both less than 10 percent (22,23).

The approximate RSE of a population-based rate is equivalent to the approximate RSE of the numerator (obtained by the method described above using figures from [table II](#)) if the denominator is an estimate produced by the U.S. Bureau of the Census for the total population or one or more of the age-sex groups of the total population.

The approximate RSE of a ratio ( $X/Y$ ) in which the numerator ( $X$ ) and the denominator ( $Y$ ) are both estimated from the same survey, but the numerator is not a subclass of the denominator, is calculated using the formula:

$$\text{RSE}(X/Y) = \sqrt{[\text{RSE}(X)]^2 + [\text{RSE}(Y)]^2}$$

When multiplied by 100, the RSE( $X/Y$ ) is expressed as a percent of the ratio

$X/Y$ . This approximation is valid if the RSE of the denominator is less than 5 percent or the RSE's of both the numerator and denominator are both less than 10 percent (22,23).

### Definitions of Selected Terms

**Age**—Age refers to a patient's age at the birthday prior to admission to the hospital.

**Average length of stay**—The average length of stay is the mean length of stay for discharges. It is calculated by dividing the number of days of care by the number of discharges.

**Days of care**—Days of care are the total number of days a patient spent in the hospital. A stay of less than 1 day (patient admission and discharge on the same day) is counted as 1 day. For patients admitted and discharged on different days, the number of days of care is computed by counting all the days from (and including) the day of admission to (but not including) the day of discharge.

**Death rate**—The death rate for discharges is calculated by dividing the number of deaths for a category by the total number of discharges in that category and multiplying by 100. Discharges whose status is unknown (0.8 percent) were assumed to be discharged alive.

**Diagnosis**—A diagnosis is a disease or injury (or other factor that influences a patient's health status or causes contact with health services) that is listed on the medical record of the patient. The diagnosis established after study to be chiefly responsible for the admission of the patient to the hospital is the principal diagnosis. The first-listed diagnosis is the one specified as the principal diagnosis on the face sheet or discharge summary of the medical record. However, if the principal diagnosis is not specified, the first one listed on the face sheet or discharge summary of the medical record is used. The number of first-listed diagnoses is the same as the number of discharges. Data for all-listed diagnoses include first-listed diagnoses and other diagnoses appearing on the medical record. A minimum of one and a maximum of

**Notice** - All information which would permit identification of an individual or an establishment will be held confidential, will be used only by persons engaged in and for the purposes of the survey, and will not be disclosed or released to other persons or used for any other purpose. Public reporting burden of this collection of information is estimated to average 4 minutes per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to DHHS Reports Clearance Officer; Paperwork Reduction Project (0920-0212); Room 531-H, Hubert H. Humphrey Building, 200 Independence Avenue, SW; Washington, DC 20201.

NOTE: Population estimates are consistent with national estimates in US-98-SIS-7 (*U.S. Population Estimates by Age, Sex, Race and Hispanic Origin: 1998*). Estimates have been adjusted for net underenumeration using the 1990 National Population Adjustment Matrix. This is a change from the populations provided in reports of 1990–1996 data from the National Hospital Discharge Survey, which were not adjusted for the underenumeration.

seven diagnoses are coded per discharge in NHDS. The HIV data (table 19) are for discharges with an HIV diagnosis listed in any position among the coded diagnoses.

*Discharge*—A discharge is a completed inpatient hospitalization. A hospitalization may be completed by

death or by releasing the patient to the customary place of residence, a nursing home, another hospital, or other locations.

*Hospital*—Hospitals include those with an average length of stay for all patients of less than 30 days (short stay) or those whose speciality is general

(medical or surgical) or children's general. Federal hospitals, hospital units of institutions, and hospitals with less than six beds staffed for patient use are excluded.

*Newborn infant*—Newborn infants are defined as patients admitted to a hospital by birth. Sick newborn infants are those that had at least one of the ICD-9-CM (1) diagnostic codes 001-999.

**Procedure**—Procedures include surgical procedures (such as tonsillectomy), diagnostic procedures (such as cystoscopy), and therapeutic treatments (such as injection or infusion of cancer chemotherapeutic substance) reported on a patient's medical record. Data are for all-listed procedures, which include all occurrences of the procedure coded, regardless of their order in the medical record. Up to four procedures are coded per discharge in NHDS. The procedures classified as nonsurgical in this report are listed in **table III** by ICD-9-CM code numbers. All other procedures were considered surgical. This classification was begun in 1979 for the presentation of NHDS data. The distinction between surgical and nonsurgical procedures has become less meaningful in the last 2 decades with the development of minimally invasive and noninvasive procedures. The procedures classified as nonsurgical may have as much operative or anesthetic risk and require highly trained personnel or special equipment similar to those classified as surgical.

*Region*—Hospitals are classified by location in one of the four geographic regions of the United States that correspond to those used by the U.S. Bureau of the Census.

### Changes in ICD-9-CM Codes

Although the ICD-9-CM has been used for coding NHDS data since 1979, the classification system undergoes annual updating. Assignment of new diagnostic and procedure codes, fourth- and fifth-digit expansion of codes, and code deletions are contained in addenda developed by the ICD-9-CM Coordination and Maintenance Committee and approved by the Director of NCHS and the Administrator of the Health Care Financing Administration. Addenda to the ICD-9-CM become effective October 1 of each year and have been released annually since 1986.

The data in this report were coded using the addenda for October 1, 1986–97. When hospitals reported data using code changes introduced in the October 1, 1998, addendum, the new codes were converted to their previous code assignments so that the annual estimates would be based on consistent coding.

Tables IV and V show the new ICD-9-CM codes from the 1986–97 addenda, the date they were introduced, and the code to which the diagnosis or procedure had been assigned before development of the new code. Specific titles and more detailed information about the coding system can be found in appropriate volumes of the ICD-9-CM (1).

**Table III. Code numbers for procedures considered nonsurgical in the National Hospital Discharge Survey by ICD-9-CM category, 1998**[Procedure categories and code numbers are based on the *International Classification of Diseases, 9th Revision, Clinical Modification (ICD-9-CM)*]

Procedure category and ICD-9-CM code	Nonsurgical codes
Operations on the nervous system . . . . . 01–05	01.18–01.19,03.31,03.39,04.19,05.19
Operations on the endocrine system . . . . . 06–07	06.19, 07.19
Operations on the eye . . . . . 08–16	08.19,09.19,09.41–09.49,10.29,11.29, 12.29,14.19,15.09,16.21,16.29
Operations on the ear . . . . . 18–20	18.01,18.11,18.19,20.31,20.39
Operations on the nose, mouth, and pharynx . . . . . 21–29	21.00–21.02,21.21,21.29,22.19,24.19, 25.09,26.19,27.29,28.19,29.11,29.19
Operations on the respiratory system . . . . . 30–34	31.41–31.42,31.48–31.49,33.21–33.23, 33.29,34.21–34.22,34.28–34.29
Operations on the cardiovascular system . . . . . 35–39	37.26–37.27,37.29,38.29,39.95
Operations on the hemic and lymphatic system . . . . . 40–41	40.19,41.38–41.39
Operations on the digestive system . . . . . 42–54	42.22–42.23,42.29,44.11–44.13,44.19,45.11–45.13,45.19,45.21–45.24,45.28–45.29, 48.21–48.23,48.29,49.21,49.29,50.19,51.10–51.11,51.19,52.19,54.21,54.29
Operations on the urinary system . . . . . 55–59	55.21–55.22,55.29,56.31,56.35,56.39,57.31–57.32,57.39,57.94–57.95, 58.21–58.22,58.29,59.29
Operations on the male genital organs . . . . . 60–64	60.18–60.19,61.19,62.19,63.09,64.19, 64.94
Operations on the female genital organs . . . . . 65–71	65.19,66.19,67.19,68.11,68.19,69.92, 70.21–70.22,70.29,71.19
Obstetrical procedures . . . . . 72–75	73.4–73.59,73.91–73.92,75.31–75.32, 75.34–75.35,75.94
Operations on the musculoskeletal system . . . . . 76–84	76.19,78.80–78.89,80.20–80.29,81.98, 83.29,84.41–84.43,84.45–84.47
Operations on the integumentary system . . . . . 85–86	85.19,86.19,86.92
Miscellaneous diagnostic and therapeutic procedures . . . . . 87–99	87.01–99.99

**Table V. Changes in procedure codes**

[Procedure code numbers are based on the *International Classification of Diseases, 9th Revision, Clinical Modification (ICD-9-CM)*]

Current code(s) assignment	Effective October 1	Previous code(s) assignment
02.96 . . . . .	1992	89.19
03.90 . . . . .	1987	03.99 (Insertion of catheter)
05.25 . . . . .	1995	39.7
11.75 . . . . .	1989	11.79
11.76 . . . . .	1989	11.62
20.96–20.98 . . . . .	1986	20.95
22.12 . . . . .	1988	22.11
26.12 . . . . .	1988	26.11
29.31 . . . . .	1991	83.02
29.32 . . . . .	1991	29.3
29.33 . . . . .	1991	29.3
29.39 . . . . .	1991	29.3
31.45 . . . . .	1988	31.43–31.44
31.95 . . . . .	1989	31.75
32.01 . . . . .	1989	32.0
32.09 . . . . .	1989	32.0
32.22 . . . . .	1995	32.29, 32.9
32.28 . . . . .	1989	32.29
33.27 . . . . .	1987	33.22 + 33.27
33.28 . . . . .	1987	33.27
33.29 . . . . .	1987	33.28–33.29
33.50 . . . . .	1995	33.5
33.51 . . . . .	1995	33.5
33.52 . . . . .	1995	33.5
33.6 . . . . .	1990	33.5 + 37.5
34.05 . . . . .	1994	34.99
35.84 . . . . .	1988	35.82
35.96 . . . . .	1986	35.03
36.00–36.03 . . . . .	1986	36.0
36.04 . . . . .	1986	39.97
36.05 . . . . .	1987	36.01
36.05 . . . . .	1986	36.01, <sup>1</sup> 36.02
36.06 . . . . .	1995	36.01, 36.02, 36.03, 36.05
36.09 . . . . .	1986	36.0
36.09 . . . . .	1991	36.00 (Code deleted)
36.17 . . . . .	1996	36.19
37.26–37.27 . . . . .	1988	37.29
37.34 . . . . .	1988	37.33
37.35 . . . . .	1997	37.33
37.65 . . . . .	1995	37.62
37.66 . . . . .	1995	37.62
37.70 (Leads only) . . . . .	1987	37.70 (Leads/device)
37.71–37.72 (Leads only) . . . . .	1987	37.74 (Leads/device)
37.73 (Leads only) . . . . .	1987	37.73 (Leads/device)
37.74 (Leads only) . . . . .	1987	37.76 (Leads/device)
37.75 (Leads only) . . . . .	1987	37.89 (Leads/device)
37.76 (Leads only) . . . . .	1987	37.81 (Leads/device)
37.77 (Leads only) . . . . .	1987	37.83–37.84 (Leads/device)
37.78 . . . . .	1987	37.71–37.72
37.79 . . . . .	1987	86.09
37.80–37.87 . . . . .	1992	89.49 (Code deleted; this procedure is included in the code for pacemaker insertion/replacement)
37.80 (device only) . . . . .	1987	37.73–37.77 (Leads/device)
37.81 (device only) . . . . .	1987	37.73–37.77 (Leads/device)
37.82 (device only) . . . . .	1987	37.73–37.77 (Leads/device)
37.83 (device only) . . . . .	1987	37.73–37.77 (Leads/device)
37.85–37.87 . . . . .	1987	37.85
37.89 . . . . .	1987	37.86 + 37.89
37.94–37.98 . . . . .	1986	37.99
38.22 . . . . .	1986	38.29
38.44 (Abdominal aorta only) . . . . .	1986	38.44 (Entire aorta)
38.45 (Thoracic aorta added) . . . . .	1986	38.44–38.45
38.95 . . . . .	1989	38.93
39.28 . . . . .	1991	39.29
39.50 . . . . .	1995	39.59
39.65 . . . . .	1988	39.61

See footnotes and notes at end of table.

**Table V. Changes in procedure codes—Con.**

[Procedure code numbers are based on the *International Classification of Diseases, 9th Revision, Clinical Modification (ICD-9-CM)*]

Current code(s) assignment	Effective October 1	Previous code(s) assignment

**Table V. Changes in procedure codes—Con.**

[Procedure code numbers are based on the *International Classification of Diseases, 9th Revision, Clinical Modification (ICD-9-CM)*]

Current code(s) assignment	Effective October 1	Previous code(s) assignment
99.85 . . . . .	1987	93.35
99.86 . . . . .	1987	93.39
99.88 . . . . .	1988	99.83

<sup>1</sup>Before October 1986 contents of current code 36.05 would have been assigned to 36.0.

<sup>2</sup>Codes 78.90–78.99 were retitled as "Insertion of bone growth stimulator" in October 1987; the previous contents of codes 78.90–78.99 were reassigned to codes 78.40–78.49.

<sup>3</sup>Codes 99.71–99.79 were deleted in October 1987; their contents were not transferred elsewhere. In the October 1988 revision, codes 99.71–99.79 were reclassified as "Therapeutic apheresis." Codes 99.75–99.78 have not yet been reassigned.

# Vital and Health Statistics series descriptions

- SERIES 1. **Programs and Collection Procedures**—These reports describe the data collection programs of the National Center for Health Statistics. They include descriptions of the methods used to collect and process the data, definitions, and other material necessary for understanding the data.
- SERIES 2. **Data Evaluation and Methods Research**—These reports are studies of new statistical methods and include analytical techniques, objective evaluations of reliability of collected data, and contributions to statistical theory. These studies also include experimental tests of new survey methods and comparisons of U.S. methodology with those of other countries.
- SERIES 3. **Analytical and Epidemiological Studies**—These reports present analytical or interpretive studies based on vital and health statistics. These reports carry the analyses further than the expository types of reports in the other series.
- SERIES 4. **Documents and Committee Reports**—These are final reports of major committees concerned with vital and health statistics and documents such as recommended model vital registration laws and revised birth and death certificates.
- SERIES 5. **International Vital and Health Statistics Reports**—These reports are analytical or descriptive reports that compare U.S. vital and health statistics with those of other countries or present other international data of relevance to the health statistics system of the United States.
- SERIES 6. **Cognition and Survey Measurement**—These reports are from the National Laboratory for Collaborative Research in Cognition and Survey Measurement. They use methods of cognitive science to design, evaluate, and test survey instruments.
- SERIES 10. **Data From the National Health Interview Survey**—These reports contain statistics on illness; unintentional injuries; disability; use of hospital, medical, and other health services; and a wide range of special current health topics covering many aspects of health behaviors, health status, and health care utilization. They are based on data collected in a continuing national household interview survey.
- SERIES 11. **Data From the National Health Examination Survey, the National Health and Nutrition Examination Surveys, and the Hispanic Health and Nutrition Examination Survey**—Data from direct examination, testing, and measurement on representative samples of the civilian noninstitutionalized population provide the basis for (1) medically defined total prevalence of specific diseases or conditions in the United States and the distributions of the population with respect to physical, physiological, and psychological characteristics, and (2) analyses of trends and relationships among various measurements and between survey periods.
- SERIES 12. **Data From the Institutionalized Population Surveys**—Discontinued in 1975. Reports from these surveys are included in Series 13.
- SERIES 13. **Data From the National Health Care Survey**—These reports contain statistics on health resources and the public's use of health care resources including ambulatory, hospital, and long-term care services based on data collected directly from health care providers and provider records.
- SERIES 14. **Data on Health Resources: Manpower and Facilities**—Discontinued in 1990. Reports on the numbers, geographic distribution, and characteristics of health resources are now included in Series 13.
- SERIES 15. **Data From Special Surveys**—These reports contain statistics on health and health-related topics collected in special surveys that are not part of the continuing data systems of the National Center for Health Statistics.
- SERIES 16. **Compilations of Advance Data From Vital and Health Statistics**—Advance Data Reports provide early release of information from the National Center for Health Statistics' health and demographic surveys. They are compiled in the order in which they are published. Some of these releases may be followed by detailed reports in Series 10–13.
- SERIES 20. **Data on Mortality**—These reports contain statistics on mortality that are not included in regular, annual, or monthly reports. Special analyses by cause of death, age, other demographic variables, and geographic and trend analyses are included.
- SERIES 21. **Data on Natality, Marriage, and Divorce**—These reports contain statistics on natality, marriage, and divorce that are not included in regular, annual, or monthly reports. Special analyses by health and demographic variables and geographic and trend analyses are included.
- SERIES 22. **Data From the National Mortality and Natality Surveys**—Discontinued in 1975. Reports from these sample surveys, based on vital records, are now published in Series 20 or 21.
- SERIES 23. **Data From the National Survey of Family Growth**—These reports contain statistics on factors that affect birth rates, including contraception, infertility, cohabitation, marriage, divorce, and remarriage; adoption; use of medical care for family planning and infertility; and related maternal and infant health topics. These statistics are based on national surveys of women of childbearing age.
- SERIES 24. **Compilations of Data on Natality, Mortality, Marriage, Divorce, and Induced Terminations of Pregnancy**—These include advance reports of births, deaths, marriages, and divorces based on final data from the National Vital Statistics System that were published as supplements to the *Monthly Vital Statistics Report* (MVSR). These reports provide highlights and summaries of detailed data subsequently published in *Vital Statistics of the United States*. Other supplements to the MVSR published here provide selected findings based on final data from the National Vital Statistics System and may be followed by detailed reports in Series 20 or 21.
