

Name: Caleb Callaway

Protected content unlocked only by a proprietary device or program:

This problem is found in many services and across a wide range of platforms. My particular case is the use of music purchased on iTunes, which I cannot play on my MP3-enabled handheld device because Apple has not made licenses to their Fairplay DRM available. This is monopolistic behavior--and also a violation of a user's fair rights--legalized by the DMCA.

An exemption should be made to protect those who wish to legally use their protected content in a third-party device or program.
