TECHNICAL HIGHLIGHTS

During 2001, various hydrologic studies conducted by the U.S. Geological Survey (USGS) in cooperation with State, local, and Federal agencies provided information to better define and manage the State's water resources. Selected technical highlights from the USGS programs conducted in Georgia include:

- Characterization of fractured crystalline rock aquifers at selected sites in the vicinity of Lawrenceville, Georgia, 2001
by Lester J. Williams
- Hydrogeology and aquifer tests in the Floridan aquifer system at selected sites, Coastal Georgia, 2001
by L.G. Harrelson and W.F. Falls
- Hydrogeology and ground-water quality of Coastal Plain sediments in the central Fort Gordon area, near Augusta, Georgia, 2001
by Sherlyn Priest
