

economic benefits. Proponents thought it a boon; opponents predicted negative regional economic impacts. Economic studies done prior to restoration predicted large positive economic benefits. The wolf recovery program has now matured; this proposal would quantify the economic and social effects due to wolf restoration as well as provide critical baseline information for other planning and analyses.

Wolf recovery generates positive economic impacts on the Greater Yellowstone Area (GYA) regional economy in several ways. The most significant impacts arise from visitors traveling from outside the region who choose to come to Yellowstone because wolves are present or who extend their stay because of wolves. Other impacts include wolf-program related expenditures. Economic impacts depend on visitor numbers and expenditures, which are best measured through visitor surveys. Understanding the contribution of wolf recovery requires development of a model of the actual aggregate role of Yellowstone National Park in the regional economy.
