

The purpose of this document is to serve as a technical guide to various groups who must address potential or existing contamination problems in hydrologic systems using trace tests. Hydrologic complexities and inadequate data tends to relegate initial tracer-test designs regarding appropriate tracer masses and sample collection times to simple conjecture. This document and associated computer program alleviate some of these problems.

EHTD produces a detailed assessment of expected tracer-test results before a tracer test is ever initiated. It also produces a probable tracer-breakthrough curve for each sampling station. Preliminary testing of EHTD has shown it to be reliable in most instances.
