

distributed to PACHA members should submit materials to the Acting Executive Director, PACHA, whose contact information is listed above prior to close of business August 4, 2003.

This notice is being published less than 15 days in advance of the meeting due to issues pertaining to technical arrangements.

Dated: July 25, 2003.

Josephine B. Robinson,

Acting Executive Director, Presidential Advisory Council on HIV/AIDS.

[FR Doc. 03-19566 Filed 7-31-03; 8:45 am]

Centers for Disease Control and Prevention

[30 Day-56-03]

Proposed Data Collections Submitted for Public Comment and Recommendations

The Centers for Disease Control and Prevention (CDC) publishes a list of information collection requests under review by the Office of Management and Budget (OMB) in compliance with the Paperwork Reduction Act (44 U.S.C.

chapter 35). To request a copy of these requests, call the CDC Reports Clearance Officer at (404) 498-1210. Send written comments to CDC, Desk Officer, Human Resources and Housing Branch, New Executive Office Building, Room 10235, Washington, DC 20503 or by fax to (202) 395-6974. Written comments should be received within 30 days of this notice.

Proposed Project: Risk Factors for Microbial Contamination of Produce: A Field Study of Domestic and Imported Produce in Packing Sheds (OMB No. 0920-0487)—Reinstatement—National Center for Environmental Health (NCEH), Centers for Disease Control and Prevention (CDC).

Background

Foodborne diseases are common; an estimated 6-33 million cases occur each year in the United States. Although most of these infections cause mild illness, severe infections and serious complications do occur. The public health challenges of foodborne diseases are changing rapidly. In recent years, new and emerging foodborne pathogens have been described and changes in food production have led to new food safety concerns. Foodborne diseases have been associated with many different foods, including recent outbreaks linked to contaminated fresh

fruits (e.g., cantaloupe, strawberries) and vegetables (e.g., leaf lettuce, alfalfa sprouts).

NCEH proposes to conduct a study to determine what specific produce processing practices are associated with fecal contamination of fruits and vegetables. Handling and processing methods used in the produce industry may increase the risk that these foods will become contaminated with fecal matter. The study will describe the chain of processing-shipping practices for five vulnerable produce groups (leafy greens, leafy herbs, green onions, cabbage, melon/cantaloupe). Critical practices where contamination with foodborne pathogens is likely will be identified by measuring the microbial quality of produce at each step during processing. Sources of fecal contamination will be determined by measuring the microbial quality of process water, measuring fecal indicator organisms on hand rinses from packing shed laborers, and conducting sanitary surveys of sources of human and animal feces in and around the processing areas.

CDC, National Center for Environmental Health is requesting a three-year clearance. The total burden hours is estimated to be 172.5.

Respondents	Number of respondents	Number of responses/respondent	Avg. burden/response (in hours)
Packing Facility Recruiting visit	25	1	30/60
Packing Shed Manager Interview (in person)	20	6	30/60
Hand Rinse Sample Collection	100	6	10/60

Dated: July 24, 2003.

Laura Y. Martin,

Acting Associate Director for Policy, Planning and Evaluation, Centers for Disease Control and Prevention.

Centers for Disease Control and Prevention

[30 Day-57-03]

Proposed Data Collections Submitted for Public Comment and Recommendations

The Centers for Disease Control and Prevention (CDC) publishes a list of information collection requests under review by the Office of Management and Budget (OMB) in compliance with the

Paperwork Reduction Act (44 U.S.C. chapter 35). To request a copy of these requests, call the CDC Reports Clearance Officer at (404) 498-1210. Send written comments to CDC, Desk Officer, Human Resources and Housing Branch, New Executive Office Building, Room 10235, Washington, DC 20503 or by fax to (202) 395-6974. Written comments should be received within 30 days of this notice.

Proposed Project: AIDS Prevention Surveillance Project Reports (OMB No. 0920-0208)—Extension—National Center for HIV, STD, and TB Prevention (NCHSTP), Centers for Disease Control and Prevention. CDC proposes to continue the collection of data for the AIDS Prevention and Surveillance Project Reports, OMB No. 0920-0208, for an additional three years. This request is for a three-year extension. There are currently 65 cooperative agreements for HIV prevention projects (50 states, 6 cities, 7 territories, Washington, DC, and Puerto Rico) and

54 community based organizations to support HIV counseling, testing, and referral programs funded by CDC. Program initiatives such as HIV counseling, testing, and referral services in STD clinics, Women's Health Centers, Drug Treatment Centers, and other health facilities have been described as a primary prevention strategy of the national HIV prevention program. The funded public health departments and community based organizations have increased the provision of HIV counseling, testing, and referral activities to those at increased risk for acquiring or transmitting HIV, as well as minority communities and women of child bearing age.

CDC is responsible for monitoring and evaluating HIV prevention programs conducted under the HIV Prevention cooperative agreements. HIV counseling, testing, and referral services are a major component of HIV

prevention programs. Without data to measure the impact of HIV counseling, testing, and referral programs, HIV prevention program priorities cannot be assessed and redirected to prevent further spread of the virus in the general population. CDC needs information from all grantees describing the number of HIV tests completed for at-risk persons and the number HIV-positive test results for at-risk persons. The HIV counseling and testing report form

provides a simple yet complete means to collect this information. Public health departments will be able to use either a summary form, a scan form, or a form unique to their jurisdiction. All reporting to the CDC will take place electronically. Sixteen (16) respondents (public health departments) will use the summary data collection tool. It takes approximately 2 hours to complete the form. The respondents will complete the form 4 times each year for a total burden of 8 hours per year per project area. Thirty

(30) respondents (public health departments) will use a scan form provided by CDC. Nineteen (19) respondents (public health departments) will use a form unique to their jurisdiction. It will take approximately 15 minutes for each respondent using either the scan or unique formats to transfer data to CDC electronically on a quarterly basis for a total burden per project area of 1 hour per year. The total annual burden hours for this data collection is 177 hours.

Respondents	Number of respondents	Number of responses per respondent	Average burden per response (in hours)
Manual Form Project Areas	16	4	2
Scan or Unique Form Project	49	4	15/60

Dated: July 24, 2003.

Laura Y. Martin,

Acting Associate Director for Policy, Planning and Evaluation, Centers for Disease Control and Prevention.

Proposed Project: Centers for Disease Control and Prevention's Performance Evaluation Program for Mycobacterium Tuberculosis and Non-Tuberculosis Mycobacterium (NTM) Drug Susceptibility Testing—New—Public Health Practice Program Office (PHPPPO), Centers for Disease Control and Prevention (CDC).

As part of the continuing effort to support both domestic and global public health objectives for treatment of tuberculosis (TB), prevention of multi-drug resistance and surveillance programs, the Division of Laboratory Systems seeks to collect information from domestic private clinical and public health laboratories twice per year. Participation and information collections from international laboratories will be limited to those which have public health responsibilities for tuberculosis drug susceptibility testing and approval by their national tuberculosis program. While the overall number of cases of TB in the U.S. has decreased, rates still remain high among foreign-born persons, prisoners, homeless populations, and individuals infected with HIV in major metropolitan areas. The rate of TB cases detected in foreign-born persons has been reported to be almost nine times higher than the rate among the U.S. born population. CDC's goal to eliminate TB will be virtually

impossible without considerable effort in assisting heavy disease burden countries in the reduction of tuberculosis. The *M. tuberculosis/NTM* program supports this role by monitoring the level of performance and practices among laboratories performing *M. tuberculosis* susceptibility within the U.S. as well as internationally to ensure high-quality laboratory testing, resulting in accurate and reliable results.

Information collected in this program will include the susceptibility test results of primary and secondary drugs, concentrations, and test methods performed by laboratories on a set of challenge isolates sent twice yearly.

A portion of the response instrument will collect demographic data such as laboratory type and the number of tests performed annually. By providing an evaluation program to assess the ability of the laboratories to test for drug resistant *M. tuberculosis* and selected strains of NTM, laboratories will also have a self-assessment tool to aid in maximizing their skills in susceptibility testing. Information obtained from laboratories on susceptibility testing practices and procedures will assist with determining variables related to good performance, with assessing areas for training and with developing practice standards. There are no costs to respondents.

Respondents	Number of respondents	Number of responses per respondent	Average burden per response (in hours)
Private Clinical and Public Health Laboratories	165	2	30/60
