

- Mechanisms for States and Tribes to refine the exposure duration and frequency components of the atrazine criteria to best meet their more specific needs;

- Mechanisms for States and Tribes to best define exposure duration and frequency components of their criteria to clearly establish when a water as impaired (*i.e.*, the water quality criteria are not being attained in stream) due to atrazine contamination;

- Mechanisms to establish screening levels (rolling average concentrations below the criteria) that if met would alleviate the need for States and Tribes to run complex models to determine if the chronic freshwater criteria is being met;

The Office of Water expects that it will obtain the necessary data to support the implementation document through a data generation agreement between the Office of Pesticides Programs and the Registrant. The Registrant will conduct a three year monitoring program in selected waters that will generate the data that EPA would use to provide additional information on how States and Tribes may adjust standards for more localized duration and frequency components of the criteria and more refined definitions of frequency and duration components of their criteria to clearly establish when a water is impaired waters for the purposes of CWA sections 305(b) and 303(d).

F. What Specific Questions of Science Does EPA Want Views on?

Though the public is welcome to submit scientific views on any component of the atrazine aquatic life criteria document, EPA is specifically interested in scientific views on the following issues of science:

- The use of the Average Primary Producer Steinhaus Similarity deviation of 5% (as determined using the Comprehensive Aquatic Systems Model (CASM)) as protective of chronic effects to freshwater aquatic life;

- The applicability of the same approach to the protection of chronic effects to salt water aquatic life in place of a Guidelines calculated concentration stated above in II.C. Conceptually, the approach used for fresh water chronic criteria should be equally applicable to salt water chronic criteria. To date, however, salt water toxicity data have not been employed in the model. Additionally, there are fewer atrazine toxicity data available for salt water species than for freshwater species.

G. Where Can I Find More Information on EPA's Revised Process for Developing New or Revised Draft Criteria?

The Agency published detailed information about its revised process for developing and revising criteria in the **Federal Register** on December 10, 1998 (63 FR 68354) and in the EPA document entitled, National Recommended Water Quality—Correction (EPA 822-Z-99-001, April 1999). The purpose of the revised process is to provide expanded opportunities for public input, and to make the criteria development process more efficient.

Dated: October 31, 2003.

Assistant Administrator, Office of Water.
