Needs and Uses: 47 CR 76.1708 requires a cable system to designate the location of its principal headend. 47 CFR 76.1709 was previously reported as section 76.302, which requires the operator of every cable television system to maintain a public inspection file containing a list of all broadcast television stations carried by its system in fulfillment of the must-carry requirements pursuant to section 76.1620 and the designation and location of its principal headend. Sections 76.1709 and 76.1620 state that upon written request from any person, a cable operator is required to provide the lists of must-carried signals in writing within 30 days of receipt of such request. Additionally, section 76.1620 states that if a cable operator authorizes subscribers to install additional receiver connections, but does not provide the subscriber with such connections, or with the equipment and materials for

such connections, the operator shall notify such subscribers of all broadcast stations carried on the cable system which cannot be viewed via cable without a converter box and shall offer to sell or lease such a converter box to such subscribers. The notice, which may be included in routine billing statements, shall identify the signals that are unavailable without an additional connection, the manner for obtaining such additional connection, and instructions for installation.
