Federal Railroad Administration

Petition for Waiver of Compliance

In accordance with Part 238.21 of Title 49 Code of Federal Regulations (CFR), notice is hereby given that the Federal Railroad Administration (FRA) received a request for a waiver of compliance with certain requirements of its safety standards. The individual petition is described below, including the party seeking relief, the regulatory provisions involved, the nature of the relief being requested, and the petitioner's arguments in favor of relief.

Northeast Illinois Regional Commuter Railroad Corporation Waiver Petition Docket Number FRA-2004-19396

The Northeast Illinois Regional Commuter Railroad Corporation (Metra) further identified herein as the railroad, seeks approval for a waiver of compliance with the requirements of the Passenger Equipment Safety Standards contained in 49 CFR 238.105(d)(1), *train electronic hardware and software safety*. Section 49 CFR 238.105(d)(1) states that:

Hardware and software that controls or monitors a train's primary braking system shall either: (i) Fail safely by initiating a full service brake application in the event of a hardware or software failure that could impair the ability of the engineer to apply or release the brakes; or (ii) Access to direct manual control of the primary braking system (both service and emergency braking) shall be provided to the engineer.

The railroad is purchasing 26 new bi-level electric passenger MU's and the braking software being provided by the manufacturer only partly meets the above requirements. The railroad requests that an application of only emergency brakes in the event of a loss of power, or failure (hardware and software), of the friction brake control unit be allowed in lieu of either the requirement for a full service brake application or restoration of direct manual control of the primary braking system to the operator.

The twenty-six new electric MU locomotives are being built by Sumitomo Corporation of America/Nippon Sharyo and the air brake system is provided by Knorr Brake Corporation, Westminster, Maryland. The railroad explains in their petition that the full service brake application is transmitted electronically to each MU's Friction Brake Control Unit (FBCU). The FBCU then provides the requested brake application without drawing down brake pipe pressure. An Emergency Magnetic Valve (EMV) is provided on each MU for an electronic emergency brake application. During normal operations, the EMVs are energized in the closed position and any loss of power of software malfunction causes the EMVs to open and vent to atmosphere causing the brakes over the entire consist to apply at an emergency rate.

Interested parties are invited to participate in these proceedings by submitting written views, data or comments. Each comment shall set forth specifically the basis upon which it is made, and contain a concise statement of the interest of the commenter in the proceeding. The FRA does not anticipate scheduling a public hearing in connection with these proceedings since the facts do not appear to warrant a hearing. If any interested party desires an opportunity for oral comment, they should notify the FRA, in writing, before the end of the comment period and specify the basis for their request.

All communications concerning these proceedings should identify the appropriate docket number (FRA-2004-19396) and must be submitted to the Docket Clerk, DOT Docket Management Facility, Room PL-401 (Plaza Level),
