An authorization (otherwise known as “discretionary spending”) explicitly allows funding for a certain program and / or directs a federal agency to take a certain action. Authorizations express the House's *intent* to spend, however, actual funding is provided through the annual appropriations process. **Authorizations with no net cost, bills that would result in no significant net change in mandatory spending or federal revenue, and private-sector costs from federal mandates are not reported here.**

Mandatory spending directly establishes an appropriation. No subsequent action is required for the money to be spent. The figures for revenue changes are from “**static**” estimates by the Joint Committee on Taxation or the Congressional Budget Office. That is, they do not take into account the stimulative effects that tax cuts and certain other revenue reductions have on the national economy.

All numbers in “The Money Monitor” are positive unless otherwise indicated.

**Neither the costs of conference reports nor the costs of bills that have already been recorded under substantively similar House-passed legislation are recorded here.** “The Money Monitor” only accounts for the costs of bills as they first pass the House (unless the prior bills related to such reports and bills have not come to the floor during this calendar year or unless they contain significant cost changes BEFORE going to the Senate). **In short, “The Money Monitor” primarily tracks the House’s original monetary intent each calendar year.**

Most estimates are provided by the Congressional Budget Office (CBO), though some are provided by the Joint Committee on Taxation, the referring House committee, or RSC staff calculations.
