08 when used in or on all food commodities.

[66 FR 16874, Mar. 28, 2001]

§ 180.1214 *Bacillus thuringiensis* **Cry3Bb1 protein and the genetic material necessary for its production in corn; exemption from the requirement of a tolerance.**

Bacillus thuringiensis Cry3Bb1 protein and the genetic material necessary for its production in corn are exempt from the requirement of a tolerance when used as plant-incorporated protectants in the food and feed commodities of field corn, sweet corn and popcorn. Genetic material necessary for its production means the genetic material which comprise genetic material encoding the Cry3Bb1 protein and its regulatory regions. Regulatory regions are the genetic material, such as promoters, terminators, and enhancers, that control the expression of the genetic material encoding the Cry3Bb1 protein.

[69 FR 16814, Mar. 31, 2004]

EFFECTIVE DATE NOTE: At 72 FR 20434, 20435, Apr. 25, 2007, § 180.1214 was redesignated as § 174.518 and revised, effective July 24, 2007. For the convenience of the user, the revised text is set forth as follows:

§ 174.518 **Bacillus thuringiensis Cry3Bb1 protein in corn; exemption from the requirement of a tolerance.**

Residues of *Bacillus thuringiensis* Cry3Bb1 protein in corn are exempt from the requirement of a tolerance when used as plant-incorporated protectants in the food and feed commodities of corn; corn, field; corn, sweet; and corn, pop.

§ 180.1215 *Bacillus thuringiensis* **Cry2Ab2 protein and the genetic material necessary for its production in cotton; exemption from the requirement of a tolerance.**

Bacillus thuringiensis Cry2Ab2 protein and the genetic material necessary for its production in cotton is exempt from the requirement of a tolerance when used as a plant-incorporated protectant in the food and feed commodities, cotton seed, cotton oil, cotton meal, cotton hay, cotton hulls, cotton forage, and cotton gin byproducts. Genetic material necessary for its production means the genetic material which comprise genetic material encoding the Cry2Ab2 protein and its regulatory regions. Regulatory regions are the genetic material, such as promoters, terminators, and enhancers, that control the expression of the genetic material encoding the Cry2Ab2 protein.

[69 FR 16823, Mar. 31, 2004]

EFFECTIVE DATE NOTE: At 72 FR 20434, 20435, Apr. 25, 2007, § 180.1215 was redesignated as § 174.519 and revised, effective July 24, 2007. For the convenience of the user, the revised text is set forth as follows:

§ 174.519 **Bacillus thuringiensis Cry2Ab2 protein in cotton; exemption from the requirement of a tolerance.**

Residues of *Bacillus thuringiensis* Cry2Ab2 protein in cotton is exempt from the requirement of a tolerance when used as a plant-incorporated protectant in the food and feed commodities, cotton seed, cotton oil, cotton meal, cotton hay, cotton hulls, cotton forage, and cotton gin byproducts.

§ 180.1216 *B*-D-glucuronidase from *E. coli* **and the genetic material necessary for its production as a plant-pesticide inert ingredient; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *B*-D-glucuronidase from *E. coli* and the genetic material necessary for its production when used as a plant-pesticide inert ingredient in or on all food commodities. Genetic material necessary for the production means both: Genetic material that encodes a substance or leads to the production of a substance; and regulatory regions. It does not include non-coding, non-expressed nucleotide sequences. Regulatory region means genetic material that controls the expression of the genetic material that encodes a pesticidal substance or leads to the production of a pesticidal substance. Examples of regulatory regions include, but are not limited to, promoters, enhancers, and terminators.
