

§ 1478.15

(1) The producer has failed to provide adequate and acceptable production records;

(2) The loss to the crop is because of a disaster condition not covered by this part, or circumstances other than natural disaster, and there has not otherwise been an accounting of this ineligible cause of loss;

(3) The producer carries out a practice, such as double cropping, that generally results in lower yields than the established historic yields;

(4) The producer has a contract to receive a guaranteed payment for all or a portion of the crop; or

(5) A crop is late-planted.

(j) For sugarcane, the quantity of sugar produced from such crop shall exclude acreage harvested for seed.

(k) For peanuts, the actual production shall be all peanuts harvested for nuts regardless of their disposition or use as adjusted for low quality.

(1) For tobacco, except flue-cured and burley, the actual production shall be the sum of the tobacco: marketed or available to be marketed; destroyed after harvest; and produced but unharvested, as determined by an appraisal. For flue-cured and burley tobacco, the actual production shall be the sum of the tobacco: marketed, regardless of whether the tobacco was produced in the current crop year or a prior crop year; on hand; destroyed after harvest; and produced but unharvested, as determined by an appraisal.

§ 1478.15 Calculation of acreage for crop losses other than prevented planted.

(a) Subject to paragraph (b) of this section, the acreage of a crop planted in each planting period shall be considered a different crop for the purpose of determining disaster benefits under this part.

(b) In cases where there is a repeat crop, double crop or a multiple planting, each of these crops may be considered different crops if the county committee determines that:

(1) Both the initial and subsequent planted crops were planted with an intent to harvest;

7 CFR Ch. XIV (1-1-01 Edition)

(2) The subsequent crop was planted after the time when the initial crop would normally have been harvested;

(3) Both the initial and subsequent planted crops were planted within the normal planting period for that crop; and

(4) Both the initial and subsequent planted crops meet all other eligibility provisions of this part including good farming practices.

(c) In cases where an initial crop is planted and fails due to an eligible disaster condition and it is generally considered too late to replant and a subsequent crop is planted on the same acreage within its normal planting period in the same crop year and also failed because of an eligible disaster condition, both crops are eligible for disaster assistance if they meet all other eligibility provisions of this part.

§ 1478.16 Calculation of prevented planted acreage.

(a) When determining losses under this part, prevented-planted acreage will be considered separately from planted acreage of the same crop.

(b) Except as provided in paragraph (c) of this section, for insured crops, disaster payments under this part for prevented-planted acreage shall not be made unless RMA documentation indicates that the eligible producer received a prevented planting payment under the RMA-administered program.

(c) For insured crops, disaster payments under this part for prevented-planted acreage will be made available for the following crops for which prevented planting coverage was not available and for which the county committee will make an eligibility determination according to paragraph (d) of this section: peppers; sweet corn (fresh market); tomatoes (fresh market); tomatoes (processing).

(d) For uninsured or noninsurable crops, or the insured crops listed in paragraph (c) of this section, the producer must prove, to the satisfaction of the county committee, an intent to plant the crop and that such crop could not be planted because of an eligible disaster. The county committee must be able to determine the producer was prevented from planting the crop by an eligible disaster that both:
