

§ 1478.15

(1) The producer has failed to provide adequate and acceptable production records;

(2) The loss to the crop is because of a disaster condition not covered by this part, or circumstances other than natural disaster, and there has not otherwise been an accounting of this ineligible cause of loss;

(3) The producer carries out a practice, such as double cropping, that generally results in lower yields than the established historic yields;

(4) The producer has a contract to receive a guaranteed payment for all or a portion of the crop; or

(5) A crop is late-planted.

(j) For sugarcane, the quantity of sugar produced from such crop shall exclude acreage harvested for seed.

(k) For peanuts, the actual production shall be all peanuts harvested for nuts regardless of their disposition or use as adjusted for low quality.

(1) For tobacco, except flue-cured and burley, the actual production shall be the sum of the tobacco: marketed or available to be marketed; destroyed after harvest; and produced but unharvested, as determined by an appraisal. For flue-cured and burley tobacco, the actual production shall be the sum of the tobacco: marketed, regardless of whether the tobacco was produced in the current crop year or a prior crop year; on hand; destroyed after harvest; and produced but unharvested, as determined by an appraisal.

§ 1478.15 Calculation of acreage for crop losses other than prevented planted.

(a) Subject to paragraph (b) of this section, the acreage of a crop planted in each planting period shall be considered a different crop for the purpose of determining disaster benefits under this part.

(b) In cases where there is a repeat crop, double crop or a multiple planting, each of these crops may be considered different crops if the county committee determines that:

(1) Both the initial and subsequent planted crops were planted with an intent to harvest;

7 CFR Ch. XIV (1-1-01 Edition)

(2) The subsequent crop was planted after the time when the initial crop would normally have been harvested;

(3) Both the initial and subsequent planted crops were planted within the normal planting period for that crop; and

(4) Both the initial and subsequent planted crops meet all other eligibility provisions of this part including good farming practices.

(c) In cases where an initial crop is planted and fails due to an eligible disaster condition and it is generally considered too late to replant and a subsequent crop is planted on the same acreage within its normal planting period in the same crop year and also failed because of an eligible disaster condition, both crops are eligible for disaster assistance if they meet all other eligibility provisions of this part.

§ 1478.16 Calculation of prevented planted acreage.

(a) When determining losses under this part, prevented-planted acreage will be considered separately from planted acreage of the same crop.

(b) Except as provided in paragraph (c) of this section, for insured crops, disaster payments under this part for prevented-planted acreage shall not be made unless RMA documentation indicates that the eligible producer received a prevented planting payment under the RMA-administered program.

(c) For insured crops, disaster payments under this part for prevented-planted acreage will be made available for the following crops for which prevented planting coverage was not available and for which the county committee will make an eligibility determination according to paragraph (d) of this section: peppers; sweet corn (fresh market); tomatoes (fresh market); tomatoes (processing).

(d) For uninsured or noninsurable crops, or the insured crops listed in paragraph (c) of this section, the producer must prove, to the satisfaction of the county committee, an intent to plant the crop and that such crop could not be planted because of an eligible disaster. The county committee must be able to determine the producer was prevented from planting the crop by an eligible disaster that both:

Commodity Credit Corporation, USDA

§ 1478.17

(1) Prevented most producers from planting on acreage with similar characteristics in the surrounding area; and

(2) Unless otherwise approved by the Deputy Administrator, began no earlier than the planting season for the 1999 crop.

(e) Prevented planted disaster benefits under this part shall not apply to:

(1) Aquaculture, including ornamental fish; perennial forage crops grown for hay, seed, or grazing; ginseng root and ginseng seed; honey; maple sap; millet; nursery crops; sweet potatoes; tobacco; trees; turfgrass sod; and tree and vine crops;

(2) Any acreage that is double-cropped, even if the producer has a history of double-cropping acreage;

(3) Uninsured crop acreage that is unclassified for insurance purposes;

(4) Acreage that is used for conservation purposes or intended to be left unplanted under any USDA program;

(5) The same acreage from which any benefit is derived under any program administered by the USDA on which a crop is planted and fails during the crop year except as provided in §1478.6(f);

(6) Any acreage on which a crop other than a cover crop was harvested, hayed, or grazed during the crop year;

(7) Any acreage for which a cash lease payment is received for the use of the acreage the same crop year unless the county committee determines the lease was for haying and grazing rights only and was not a lease for use of the land;

(8) Acreage for which planting history or conservation plans indicate that the acreage would have remained fallow for crop rotation purposes;

(9) Acreage for which the producer or any other person received a prevented planted payment for any crop for the same acreage, excluding share arrangements; and

(10) Acreage for which the producer cannot provide proof to the county committee that inputs such as seed, chemicals, and fertilizer were available to plant and produce a crop with the expectation of at least producing a normal yield.

(f) Disaster benefits under this part shall not apply to uninsured and non-insurable crops where the prevented-

planted acreage was affected by a disaster that was caused by drought or the failure of the irrigation water supply unless the acreage is in an area classified by the Palmer Drought Severity Index as in a severe or extreme drought during the planting period time specified by the producer and prior to the final planting date for the crop.

(g) For uninsured or noninsurable crops and the insured crops listed in paragraph (c) of this section, for prevented planting purposes:

(1) The maximum prevented-planted acreage for all crops:

(i) Cannot exceed the number of acres of cropland in the unit for the crop year; and

(ii) Will be reduced by the number of acres planted in the unit;

(2) The maximum prevented planted acreage for a crop cannot exceed the number of acres planted by the producer, or that was prevented from being planted, to the crop in any 1 of the 1995 through 1998 crop years as determined by the county committee;

(3) For crops grown under a contract specifying the number of acres contracted, the prevented-planted acreage is limited to the result of the number of acres specified in the contract minus planted acreage;

(4) For each crop type or variety for which separate prices or yields are sought for prevented-planted acreage, the producer must provide evidence that the claimed prevented-planted acres were successfully planted in at least 1 of the most recent 4 crop years; and

(5) The prevented planted acreage must be one contiguous block consisting of at least 20 acres or 20 percent of the intended planted acreage in the unit, whichever is less.

§ 1478.17 Quality adjustments to production.

(a) For the crops identified in paragraph (b) of this section, subject to the provisions of this section and part, the quantity of production of crops of the producer shall be adjusted to reflect diminished quality resulting from the disaster.

(b) Crops eligible for quality adjustments to production are limited to:
