

Commodity Credit Corporation, USDA

§ 1478.17

(1) Prevented most producers from planting on acreage with similar characteristics in the surrounding area; and

(2) Unless otherwise approved by the Deputy Administrator, began no earlier than the planting season for the 1999 crop.

(e) Prevented planted disaster benefits under this part shall not apply to:

(1) Aquaculture, including ornamental fish; perennial forage crops grown for hay, seed, or grazing; ginseng root and ginseng seed; honey; maple sap; millet; nursery crops; sweet potatoes; tobacco; trees; turfgrass sod; and tree and vine crops;

(2) Any acreage that is double-cropped, even if the producer has a history of double-cropping acreage;

(3) Uninsured crop acreage that is unclassified for insurance purposes;

(4) Acreage that is used for conservation purposes or intended to be left unplanted under any USDA program;

(5) The same acreage from which any benefit is derived under any program administered by the USDA on which a crop is planted and fails during the crop year except as provided in §1478.6(f);

(6) Any acreage on which a crop other than a cover crop was harvested, hayed, or grazed during the crop year;

(7) Any acreage for which a cash lease payment is received for the use of the acreage the same crop year unless the county committee determines the lease was for haying and grazing rights only and was not a lease for use of the land;

(8) Acreage for which planting history or conservation plans indicate that the acreage would have remained fallow for crop rotation purposes;

(9) Acreage for which the producer or any other person received a prevented planted payment for any crop for the same acreage, excluding share arrangements; and

(10) Acreage for which the producer cannot provide proof to the county committee that inputs such as seed, chemicals, and fertilizer were available to plant and produce a crop with the expectation of at least producing a normal yield.

(f) Disaster benefits under this part shall not apply to uninsured and non-insurable crops where the prevented-

planted acreage was affected by a disaster that was caused by drought or the failure of the irrigation water supply unless the acreage is in an area classified by the Palmer Drought Severity Index as in a severe or extreme drought during the planting period time specified by the producer and prior to the final planting date for the crop.

(g) For uninsured or noninsurable crops and the insured crops listed in paragraph (c) of this section, for prevented planting purposes:

(1) The maximum prevented-planted acreage for all crops:

(i) Cannot exceed the number of acres of cropland in the unit for the crop year; and

(ii) Will be reduced by the number of acres planted in the unit;

(2) The maximum prevented planted acreage for a crop cannot exceed the number of acres planted by the producer, or that was prevented from being planted, to the crop in any 1 of the 1995 through 1998 crop years as determined by the county committee;

(3) For crops grown under a contract specifying the number of acres contracted, the prevented-planted acreage is limited to the result of the number of acres specified in the contract minus planted acreage;

(4) For each crop type or variety for which separate prices or yields are sought for prevented-planted acreage, the producer must provide evidence that the claimed prevented-planted acres were successfully planted in at least 1 of the most recent 4 crop years; and

(5) The prevented planted acreage must be one contiguous block consisting of at least 20 acres or 20 percent of the intended planted acreage in the unit, whichever is less.

§ 1478.17 Quality adjustments to production.

(a) For the crops identified in paragraph (b) of this section, subject to the provisions of this section and part, the quantity of production of crops of the producer shall be adjusted to reflect diminished quality resulting from the disaster.

(b) Crops eligible for quality adjustments to production are limited to:

§ 1478.18

(1) Barley; canola; corn; cotton; crambe , flaxseed; grain sorghum; mustard seed; oats; peanuts; rapeseed; rice; safflower; soybeans; sugar beets; sunflower-oil; sunflower-seed; tobacco; wheat; and

(2) Crops with multiple market uses such as fresh, processed or juice, as supported by NASS data or other data determined acceptable.

(c) The producer must submit documentation for determining the grade and other discount factors that were applied to the crop.

(d) Quality adjustments will be applied after production has been adjusted to standard moisture, when applicable.

(e) Except for cotton, if a quality adjustment has been made for multi-peril crop insurance purposes, an additional adjustment will not be made.

(f) Quality adjustments for crops, other than cotton, peanuts, sugar beets and tobacco, listed in paragraph (b)(1) of this section may be made by applying an adjustment factor based on dividing the Federal marketing assistance loan rate applicable to the crop and producer determined according to part 1421 of this chapter by the unadjusted county marketing assistance loan rate for the crop. For crops that grade "sample" and are marketed through normal channels, production will be adjusted as determined by CCC. County committees may, with state committee concurrence, establish county average quality adjustment factors.

(g) Quality adjustments for cotton shall be based on the difference between:

(1) The loan rate applicable to the crop and producer determined according to part 1427 of this chapter; and

(2) The adjusted county loan rate. The adjusted county rate is the county loan rate adjusted for the 5-year county average historical quality premium or discount, as determined by CCC.

(h) Quality adjustments for quota peanuts shall for unused quota be based on the difference between the adjusted sales price and the quota price. The adjusted sales price is the quota price minus discounts for quality, regardless of the actual sales price received. Adjustments for non-quota peanuts may

7 CFR Ch. XIV (1-1-01 Edition)

also be made to reflect diminished quality as determined by CCC.

(i) Quality adjustments for sugar beets shall be based on sugar content. The 1999 actual production for the producer shall be adjusted upward or downward to account for sugar content as determined by CCC.

(j) Quality adjustments for tobacco shall be based on the difference between the sales price and the support price except that the market price may be used instead of the support price where market prices for the tobacco are normally in excess of the support price.

(k) Quality adjustments for crops with multiple market uses such as fresh, processed and juice, shall be applied based on the difference between the producer's historical marketing percentage of each market use compared to the actual percentage for 1999.

(l) Quality adjustments for aflatoxin shall be based on the aflatoxin level. The producer must provide the county committee with proof a price reduction because of aflatoxin. The aflatoxin level must be 20 parts per billion or more before a quality adjustment will be made. The quality adjustment factor applied to affected production is .50 if the production is marketable. If the production is unmarketable due to aflatoxin levels of at least 20 parts per billion, production will be adjusted to zero. Any value received will be considered salvage.

(m) Any quantity of the crop determined to be salvage will not be considered production. Salvage values shall be factored by 0.60.

(n) Quality adjustments do not apply to value loss crops.

(o) Quality adjustments shall not apply to: hay, honey, maple sap, turfgrass sod, crops marketed for a use other than an intended use for which there is not an established county price or yield.

§ 1478.18 Value loss crops.

(a) Special provisions to assess losses and calculate disaster assistance under this part apply to the following crops and such other crops as determined by CCC: ornamental nursery; Christmas
