§319.41

ranked in the group, the other members need not be subjected to individual plant pest risk assessment.

- (d) Conducting individual plant pest risk assessments. APHIS will evaluate each of the plant pests identified in paragraph (c)(4) of this section by:
- (1) Estimation of the probability of the plant pest being on, with, or in the regulated article at the time of importation:
- (2) Estimation of the probability of the plant pest surviving in transit on the regulated article and entering the United States undetected;
- (3) Estimation of the probability of the plant pest colonizing once it has entered into the United States;
- (4) Estimation of the probability of the plant pest spreading beyond any colonized area; and
- (5) Estimation of the damage to plants that could be expected upon introduction and dissemination within the United States of the plant pest.
- (e) Estimating unmitigated overall plant pest risk. APHIS will develop an estimation of the overall plant pest risk associated with importing the regulated article based on compilation of individual plant pest risk assessments performed in accordance with paragraph (d) of this section.
- (f) Evaluating available requirements to determine whether they would allow safe importation of the regulated article. The requirements of this subpart, and any other requirements relevant to the regulated article and plant pests involved, will be compared with the individual plant pest risk assessments in order to determine whether particular conditions on the importation of the regulated article would reduce the plant pest risk to an insignificant level. If APHIS determines that the imposition of particular conditions on the importation of the regulated article could reduce the plant pest risk to an insignificant level, and determines that sufficient APHIS resources are available to implement or ensure implementation of the conditions, APHIS will implement rulemaking to allow importation of the requested regulated article under the conditions identified by the plant pest risk assessment process.

Subpart—Indian Corn or Maize, Broomcorn, and Related Plants

QUARANTINE

§319.41 Notice of quarantine.

- (a) The fact has been determined by the Secretary of Agriculture, and notice given, that dangerous plant pests, including the so-called European corn borer (Ostrinia nubilalis Hubn.), and also other dangerous insects, as well as plant diseases not heretofore widely prevalent or distributed within and throughout the United States, exist, as to one or more of such pests, in Europe, Asia, Africa, Dominion of Canada, Mexico, Central and South America, and other foreign countries and localities, and may be introduced into this country through importations of the stalks or other parts of Indian corn or maize, broomcorn, and related plants.
- (b) The Secretary of Agriculture, under the authority conferred by the act of Congress approved August 20, 1912, known as the Plant Quarantine Act (37 Stat. 315; 7 U.S.C. 151-167), determined that it was necessary, in order to prevent the further introduction of the dangerous plant pests mentioned above, to forbid, except as provided in the rules and regulations supplemental hereto, the importation into the United States from all foreign countries and localities of the stalk and all other parts, whether used for packing or other purposes, in the raw or unmanufactured state, of Indian or maize (Zea mays L.), broomcorn (Andropogon sorghum var. technicus). sweet (Andropogon sorghum), grain sorghums (Andropogon sorghum), Sudan grass (Andropogon sudanensis). sorghum Johnson grass (Andropogon halepensis). sugarcane (Saccharum officinarum), including Japanese varimillet (Pennisetum eties, pearl glaucum), napier grass (Pennisetum purpureum). teosinte (Euchlaena luxurians), and jobs-tears (Coix lachryma-Jobi).
- (c) Hereafter, and until further notice, by virtue of said act of Congress approved August 20, 1912, the importation into the United States of the stalk

and all other parts of the plants enumerated above from all foreign countries and localities except as provided in the rules and regulations supplemental hereto, is prohibited: Provided, That whenever the Deputy Administrator of the Plant Protection and Quarantine Programs shall find that existing conditions as to pest risk involved in the importation of the articles to which the regulations supplemental hereto apply, make it safe to modify, by making less stringent, the restrictions contained in any of such regulations, he shall publish such findings in administrative instructions, specifying the manner in which the regulations shall be made less stringent, whereupon such modification shall become effective; or he may, when the public interests will permit, with respect to the importation of such articles into Guam, upon request in specific cases, authorize such importation under conditions, specified in the permit to carry out the purposes of this subpart, that are less stringent than those contained in the regulations.

(d) As used in this subpart, unless the context otherwise requires, the term "United States" means the States, the District of Columbia, Guam, Puerto Rico, and the Virgin Islands of the United States.

§ 319.41a Administrative instructions relating to entry into Guam of broomcorn, brooms, and similar articles.

(a) Broomcorn for manufacturing purposes, and brooms and similar articles made of broomcorn may be imported into Guam without further permit, other than the authorization contained in this section, and without other restriction under this subpart. Notice of arrival for such importations is not necessary inasmuch as there is available to the inspector the essential information normally supplied by the importer at time of importation. Inspection of such importations may be made under the general authority of §330.105(a) of this chapter. If an importation is found infected, infested, or contaminated with any plant pest and is not subject to disposal under this part 319, disposition may be made in

accordance with §330.106 of this chapter

- (b) Shelled corn and seeds of other plants listed in §319.41, and mature corn on the cob, may be imported into Guam without further permit, other than the authorization contained in this section and without other restriction under this subpart, but such importations are subject to the requirements of §319.37–4(a).
- (c) Green corn on the cob may be imported into Guam without restriction under this subpart, but such importations are subject to the requirements of §319.56-2.

§319.41b Administrative instructions prescribing conditions for entry of broomstraw without treatment.

Broomstraw, sometimes referred to as "combed stalkless", when consisting of individual straws entirely free from stems, stalks, stubs of stalks, and leaves, may be imported from all countries without seasonal limitation through ports of entry designated in the permit, provided it is bundled and baled to prevent breakage and scattering and to facilitate inspection, in the following manner:

- (a) The broomstraw shall be assembled into bundles with the base of the individual straws at the same end, no alternating of layers being permitted.
- (b) Each bundle shall be securely tied to prevent breakage.
- (c) Individual bundles shall be compacted, grouped into bales, and so arranged that the butt of each bundle is exposed on the outside of the bale.
- (d) Each bale shall be securely bound to prevent shifting or loosening of the bundles in transit.
- (e) Broomstraw found upon inspection at the port of entry to contain stems, stalks, stubs of stalks, or leaves shall be sterilized under the supervision of an inspector. Broomstraw contaminated in the aforesaid manner, from countries other than those on the North or South American Continents or the West Indies, shall be considered as broomcorn and shall be subject to compliance with §319.41–3(b).
