

Guam, the Northern Mariana Islands, Puerto Rico, the U.S. Virgin Islands, or in any State (each of which must be individually listed) into which the distribution of the fruit is prohibited pursuant to paragraph (g)(1) or (g)(2) of this section.

(d) *Phytosanitary certificate.* Grapefruit, lemons, and oranges offered for entry into the United States from Argentina must be accompanied by a phytosanitary certificate issued by SENASA that states the grapefruit, lemons, or oranges were produced and handled in accordance with the requirements of paragraphs (a), (b), and (c) of this section and that the grapefruit, lemons, or oranges are apparently free from citrus black spot and sweet orange scab.

(e) *Cold treatment.* Due to the presence in Argentina of Mediterranean fruit fly (Medfly) (*Ceratitis capitata*) and fruit flies of the genus *Anastrepha*, grapefruit, lemons (except smooth-skinned lemons), and oranges offered for entry from Argentina must be treated with an authorized cold treatment listed in the Plant Protection and Quarantine Treatment Manual, which is incorporated by reference at §300.1 of this chapter. The cold treatment must be conducted in accordance with the requirements of §319.56-2d of this subpart.

(f) *Disease detection.* If, during the course of any inspection or testing required by this section or §319.56-6 of this subpart, or at any other time, citrus black spot or sweet orange scab is detected on any grapefruit, lemons, or oranges, APHIS and SENASA must be notified and the grove in which the fruit was grown or is being grown shall be removed from the SENASA citrus export program for the remainder of that year's growing and harvest season, and the fruit harvested from that grove may not be imported into the United States from the time of detection through the remainder of that shipping season.

(g) *Limitations on distribution.* The distribution of the grapefruit, lemons, and oranges is limited to the continental United States (the 48 contiguous States, Alaska, and the District of Columbia.). In addition, during the 2000 through 2003 shipping seasons, the dis-

tribution of the grapefruit, lemons, and oranges is further limited as follows:

(1) During the 2000 and 2001 shipping seasons, the fruit may be distributed in all areas of the continental United States except Alabama, Arizona, Arkansas, California, Colorado, Florida, Georgia, Louisiana, Mississippi, Nevada, New Mexico, Oklahoma, Oregon, Texas, and Utah.

(2) During the 2002 and 2003 shipping seasons, the fruit may be distributed in all areas of the continental United States except Arizona, California, Florida, Louisiana, and Texas.

(3) For the 2004 shipping season and beyond, the fruit may be distributed in all areas of the continental United States.

(h) *Ports of entry.* The grapefruit, lemons, and oranges may enter the United States only through a port of entry located in a State where the distribution of the fruit is authorized pursuant to paragraph (g) of this section.

(i) *Repackaging.* If any grapefruit, lemons, or oranges are removed from their original shipping boxes and repackaged, the stickers required by paragraph (c)(5) of this section may not be removed or obscured and the new boxes must be clearly marked with all the information required by paragraph (c)(6) of this section.

§319.56-2g Administrative instructions prescribing method of treatment of garlic from specified countries.

(a) Except as otherwise provided in these administrative instructions, fumigation with methyl bromide in vacuum fumigation chambers, in accordance with the Plant Protection and Quarantine Treatment Manual, which is incorporated by reference at §300.1 of this chapter, is a condition of entry under permit for all shipments of garlic (*Allium sativum*) from Algeria, Armenia, Austria, Azerbaijan, Czech Republic, Egypt, Estonia, France, Georgia, Germany, Greece, Hungary, Iran, Israel, Italy, Latvia, Lithuania, Moldova, Morocco, Portugal, Romania, the area of the Russian Federation west of the

Ural Mountains, Slovakia, South Africa (Republic of), Spain, Switzerland, Syria, Turkey, Ukraine, and the area of the former Yugoslavia. Fumigation is to be carried out under the supervision of a plant quarantine inspector and at the expense of the importer. While it is believed that the garlic will be unaffected by the fumigation, the treatment will be at the importer's risk. Such entry will be limited to ports named in the permits, where approved facilities for vacuum fumigation with methyl bromide are available.

(b)(1) The following alternate procedure is approved by the Deputy Administrator of the Plant Protection and Quarantine Programs as a condition of entry under permit for shipments of garlic (*Allium sativum*) from Italy and Spain:

(i) A certificate shall be obtained from the appropriate phytosanitary official of the country of origin to the effect that such garlic is free of living stages of *Brachycerus* spp. and *Dyspessa ulula* (Bkh.), said certification to be based on field inspection and certification and subsequent reexamination at the port of departure prior to exportation. The phytosanitary certificate to be issued by such official shall show the shipment to be either initially free from these pests or to have been fumigated.

(ii) The original copy of the phytosanitary certificate shall be attached to the manifest accompanying the shipment. However, with the consent of the Plant Quarantine inspector, the importer may arrange to have the original phytosanitary certificate mailed direct to the Inspector in Charge, Plant Protection and Quarantine Programs, at the port of entry, if this will expedite inspection and release of certified shipments. If such an arrangement is made, a copy of the phytosanitary certificate shall be attached to the manifest accompanying the shipment.

(iii) Shipments of certified Italian or Spanish garlic will be subject to inspection upon arrival in the United States and if found infested with living stages of *Brachycerus* spp. or *Dyspessa ulula* (Bkh.) shall be fumigated in ac-

cordance with paragraph (a) of this section.

(2) The entry of certified garlic under the alternate procedure provided for in paragraph (b)(1) of this section will be limited to the ports named in paragraph (a)(1) of this section or such other ports as may subsequently be named in the permits.

(3) Continuance of the alternate procedure provided for in paragraph (b)(1) of this section for the importation of Italian or Spanish garlic is contingent upon the satisfactory observance of such procedure by the respective countries of origin.

§ 319.56-2h Regulations governing the entry of grapes from Australia.

(a) *Importations allowed.* (1) Grapes from Australia may be imported into the United States only if they are inspected by an inspector of the Animal and Plant Health Inspection Service [APHIS], either in Australia or the United States, and treated with an authorized treatment under the supervision of an APHIS inspector for the following pests: the Mediterranean fruit fly (*Ceratitidis capitata*), the Queensland fruit fly (*Dacus tryoni*), and the light brown apple moth (*Epiphyas postvittana*).

(2) If an APHIS inspector finds evidence of any other insect pests for which a treatment authorized in the Plant Protection and Quarantine Treatment Manual is available, the grapes will remain eligible for importation into the United States only if they are treated for the pests in Australia, or at their first port of arrival in the United States, under the supervision of an APHIS inspector.

(b) *Authorized treatments.* Authorized treatments are listed in the Plant Protection and Quarantine Treatment Manual, which is incorporated by reference. For the full identification of this standard, see §300.1 of this chapter, "Materials incorporated by reference."

(c) *Trust Fund Agreement.* Grapes that undergo the fumigation phase of their
