Conversation: Bisphenol A and NTP Brief

Subject: Bisphenol A and NTP Brief

Dear Dr. Shane,

I would like to express my concern with the NTP's conclusions on the effects of Bisphenol A on humans. Essentially, given the widespread use of food and beverage containers containing Bisphenol A and the possibility for widespread exposure to the public, the NTP must commit to further research of adverse health effects caused by Bisphenol A. Also, more information must be made available to educate the public as to steps they may take to limit their current exposure levels.

Thank you,

Heather N. Killmeyer
