March, 1992

ADDENDUM

On page 187 of this book, the conversion for codes 9657/3, 9658/3 and 9659/3 is for the August, 1987 and March, 1988 Field Trials. These three codes had different definitions in the 1986 Field Trial. For these codes the conversion for the 1986 Field Trial is as follows:

Morphology ICD-0 1986 Field Trial		Morphology ICD-0 Second Edition		
Code	Term	Code by Direct Computer Conversion	Specific Code	Term
9657/3	Hodgkin's disease, nodular sclerosis, lymphocytic predominance	9665/3	9665/3	Hodgkin's disease, nodular sclerosis, lymphocytic predominance
9658/3	Hodgkin's disease, nodular sclerosis, mixed cellularity	9666/3	9666/3	Hodgkin's disease, nodular sclerosis, mixed cellularity
9659/3	Hodgkin's disease, nodular sclerosis, lymphocytic depletion	9667/3	9667/3	Hodgkin's disease, nodular sclerosis, lymphocytic depletion Hodgkin's disease, nodular sclerosis, syncytial variant

Morphology Special SEER Codes Table .....	195

## INTRODUCTION

The *International Classification of Diseases for Oncology, First Edition (ICD-O-1)* [1] was published by the World Health Organization (WHO) in 1976. Since the topography section is based on the Neoplasm chapter of the current revision of the *International Classification of Diseases (ICD)*, whenever that classification is revised the ICD-O topography section must also be changed. Therefore in conjunction with the revision of the *International Classification of Diseases, Ninth Revision (ICD-9)* [2], to the *International Classification of Diseases and Related Health Services, Tenth Revision (ICD-10)* [3], the topography section of ICD-O was also revised. In addition the Morphology section of ICD-O was updated to conform to modern terminology. For example, the Non-Hodgkin's Lymphoma section is now based on the Working Formulation [4]. In the process of revising the Morphology section, three Field Trial versions were published. The first field trial was published in 1986 [5], the second in 1987 [6], and the third in March of 1988 [7]. The *International Classification of Diseases for Oncology, Second Edition (ICD-O-2)* [8] was published by WHO in 1990.

Epidemiologists, statisticians, oncologists as well as tumor registrars are interested in studying trends in both incidence and mortality. To be able to compare data from one period to another, it is essential that conversion tables be available. The following conversion (comparison or equivalency) tables are from ICD-O-1 and the Field Trial editions to ICD-O-2. These tables are divided into Topography and Morphology. There is only one conversion table for the topography since ICD-O-1 and the Field Trials used the same Topography section. However there are three tables for Morphology: one for ICD-O-1, one for the Field Trials, and one for special codes introduced by the Surveillance, Epidemiology, and End Results Program (SEER) of the National Cancer Institute (NCI).

## CONVERSION OF TOPOGRAPHY

The ICD-10 has some radical changes from its predecessors. WHO requires the reporting of mortality data at a three-character level. In order to identify many more diseases at the three-character level, an alpha character was introduced in the first position, nearly tripling the number of available categories. Therefore, Chapter 2, the

Neoplasms, begins with 'C' and has available 150 categories. An example of the extra specificity at the three-character level is the introduction of Base of tongue (C01) as a category separate from Other parts of tongue (C02).

On the left side of the topography conversion table are codes and terms from the Topography section of ICD-O-1. On the right side are two columns for codes and a third for the terms from the Topography section of ICD-O-2. The first of the two columns for codes contains the direct computer conversion. The second and third columns show the specific codes and terms encompassing the terms of ICD-O-1.

The majority of the time the direct conversion and the specific codes are the same, meaning there has been no change in definition. Other times there has been a split of the ICD-O-1 category. For complete conversion review of individual cases is necessary. For example, to completely convert 192.0 (Cranial nerves) one must hand review cases. One should only review cases where some benefit is derived. Not many people will want to review all 148.9 (Hypopharynx, NOS) cases in order to separate the Laryngopharynx. It is important to document the cases you do and do not review so that in future years researchers will know the history of the changes.

Conversion of soft or connective tissues, corpus uteri and adrenal gland can be done using morphology. See the Topography Table Appendix for the specifications of these conversions. Because one achieves very different results using topography only, topography and morphology, or hand review to convert these cases, one must document the method chosen.

## **CONVERSION OF MORPHOLOGY**

The morphology conversion tables are set up similarly to the topography conversion table. The two columns on the left show the morphology code and terms from ICD-O-1. The three columns on the right show the code for direct computer conversions and the specific codes and terms from ICD-O-2. The great majority of definitions are exactly the same in both versions. However, sometimes terms were changed or obsolete terms deleted. Occasionally terms were split out and assigned new code numbers.

Four very important changes are terms reclassified as malignant. They were previously classified as uncertain whether benign or malignant (/1). They are Carcinoids, except appendix; Cystadenomas of borderline malignancy of the ovary; Plasmacytomas, NOS; and Acute panmyelosis.

The most important change in the Morphology section is in the Non-Hodgkin's Lymphoma section. This section is now based on the Working Formulation. For a detailed discussion of the Working Formulation see the Instructions of ICD-O-2. Cases of M-9630/3 originally included small cleaved cell lymphomas and lymphoblastic lymphomas. The first group is an intermediate grade (E) lymphoma and the second group is a high grade (I) lymphoma. To be able to analyze Non-Hodgkin's Lymphomas using the Working Formulation groupings, these cases would need to be reviewed. American pathologists consider reticulosarcomas to be the same as histiocytic or large cell lymphomas. Therefore in the United States these cases can be converted mechanically without review. In other parts of the world, this may not hold true.

One must know which version of ICD-O is being converted. The first Morphology Table contains the conversion for all entities found in ICD-O-1. Because the Field Trial Editions contained many entries that are the same as those in ICD-O-1, the Morphology Field Trial Table contains only those entries introduced by either of the Field Trials or which have a different conversion than that specified for the same code in ICD-O-1. The entries which have a different conversion are marked by a '#' or '##'. If one does not know which version of ICD-O was used to code cases, these cases all should be hand reviewed. Of course, no review is required when the version is known. The Morphology Special SEER Codes Table contains only those codes introduced by SEER.

The structure of ICD-O allows the coding of matrix terms – histology/behavior combinations not explicitly contained in the Morphology Numeric Section. (See the Introduction of ICD-O for a complete discussion of the matrix system.) The conversion tables do not contain the matrix terms from ICD-O-1 or the Field Trials, and only those from ICD-O-2 that are the results of the conversion. Matrix terms are converted by using the conversion specified for the histology code, but changing the behavior code to the reported code. This procedure is much the same procedure one uses for coding a matrix term in the first place. For example, the conversion for 8012/3 (large cell carcinoma, NOS) is included in ICD-O-1 and converted to 8012/3. The matrix term 8012/2 (large cell carcinoma, NOS, in situ) is converted to 8012/2. Matrix terms associated with terms that require hand review will also require hand review.

## **SYMBOLS USED IN CONVERSION TABLES**

The following symbol is used in the Topography table:

- @** Conversion can be done using morphology to determine split. See Appendix for specifications.

The following symbols are used in the Morphology tables:

- \*** Matrix term only in ICD-O-2.
- #** Code appears for ICD-O, First Edition with a different conversion specification. For proper conversion, specific edition of ICD-O must be known or hand review is required.
- ##** Code appears for ICD-O, First Edition and the 1986 Field Trial Edition with a different conversion specification. For proper conversion, specific edition of ICD-O must be known or hand review is required.
