Conversation: Concerns over infant formula safety

aloha to all concerned with mothers milk

I am deeply against infant formula, especially soy with chemicals added to it cut off baby from natural mothers milk in the name of big science, modern convenience & sterility. I've been aware of evidence on this since early 1980s, & the propoganda campaigns by formula makers to brainwash mothers & others to buy & use their substitute for free mothers milk being more healthy for infants than anything else, if the mother is healthy. Please support mothers natural ability to nurse her baby instead of factory-made synthetic formula (ain't even 'milk') from bottle & nipple are also toxic when heated above 90oF.

respectfully yours micheal sunanda
