INTERAGENCY Edison IEdison

Interagency Edison provides Federal grantee/contractor organizations and participating federal agencies with the technology to electronically manage extramural invention portfolios in compliance with federal reporting requirements.

Interagency Edison was developed by the Office of Policy for Extramural Research Administration, National Institutes of Health, Bethesda, Maryland.

What is Interagency Edison?

Interagency Edison supports a "Common Face" for Invention Reporting to the Government. The system has been designed to facilitate gra… s mandated by the Bayh-Dole Act whose purpose is to… nercial/public sector.

The Edison system was first deployed by the NIH in October 1995. It became the first electronic system in the government to support government administrative requirements. For the first time federal grantees and contractors could comply with federal statute using a secure Internet-based transaction.

By 1997, when Edison had clearly demonstrated the benefits of electronic reporting, it became obvious that an even greater value could be realized.

Since all federal grantees and contractors must report inventions made through funding agreements to any federal agency, it made a lot of sense to get such reports submitted through a single user interface.

This would streamline the reporting process for the government's customers, leading to greater compliance with the law.

Which Government agencies are participating in Interagency Edison?

While it is the responsibility of grantee/contractor institutions to comply with the Bayh-Dole Act, as stewards of federal funds, and to provide assistance with compliance, Interagency Edison has been designed to streamline the invention reporting process mandated by the Code of Federal Regulations: 37CFR Part 401 with particular emphasis on the Standard Patent Rights Clauses, Section 401.14.

And so, with the addition of the National Science Foundation (NSF) and the U.S. Agency for International Development (USAID) came the introduction of Interagency Edison (iEdison).

Through the iEdison single user interface, inventions supported by any of these 3 agencies could be reported. The data was partitioned within the single iEdison database so that each agency could oversee their invention reports.

Which Government agencies are participating in Interagency Edison?

While it is the responsibility of grantee/contractor institutions to comply with the Bayh-Dole Act, as stewards of federal funds, and to provide assistance with compliance, Interagency Edison has been designed to streamline the invention reporting process mandated by the Code of Federal Regulations: 37CFR Part 401 with particular emphasis on the Standard Patent Rights Clauses, Section 401.14.

What is Interagency Edison?

Interagency Edison supp… m has been designed to facilitate grantee/contra… e Bayh-Dole Act whose purpose is to ensure tran… tor.

The original version of iEdison has served the extramural grantee/contractor community well. It has proven to be an incredibly reliable system (down time has been on the order of only a few hours/year). As of now approximately 500 grantee/contractor organizations are registered and using the system....and 18 federal agencies are now participating in the iEdison system!

What are the steps neces…

Which Government agencies are participating in Interagency Edison?

While it is the responsibility of grantee/contractor institutions to comply with the Bayh-Dole Act, as stewards of federal funds, and to provide assistance with compliance, Interagency Edison has been designed to streamline the invention reporting process mandated by the Code of Federal Regulations: 37CFR Part 401 with particular emphasis on the Standard Patent Rights Clauses, Section 401.14.

Because the basic Bayh-Dole regulations have not changed, the iEdison functionality continues to be valid. What has changed since 1995, however, is the Internet. It is now a way of life for all of us. Many generations of web interfaces and functionality have occurred since 1995. The administration of many government business processes now take place on the web.

To keep iEdison as a state-of-the-art reporting system, in 2000 the decision was made to begin a major redesign. Over the last two years virtually every part of the system has been analyzed and recast. The database has been updated, web scripts have been re-written using the most advanced technology...and...the user interface has been completely redesigned.

- NAVY/ONR [Office of Naval Research]
- ARMY/SSC [U.S. Army Soldier Systems Center]
- USDA/FS [Forest Service]
- USAF/ESC [Electronic Systems Center]
- USDA/ARS [Agricultural Research Service]

What are the major Invention Reporting requirements mandated by the Bayh-Dole Act?

The following checklist contains the major invention reporting requirements which are mandatory for compliance with the Bayh-Dole Act. This checklist is based on the 37 CFR 401.14:

- Sec. 401.1 Scope.
- Sec. 401.2 Definitions.
- Sec. 401.3 Use of the standard clauses at Sec. 401.14.
- Sec. 401.4 Contractor appeals of exceptions.
- Sec. 401.5 Modification and tailoring of clauses.
- Sec. 401.6 Exercise of march-in rights.

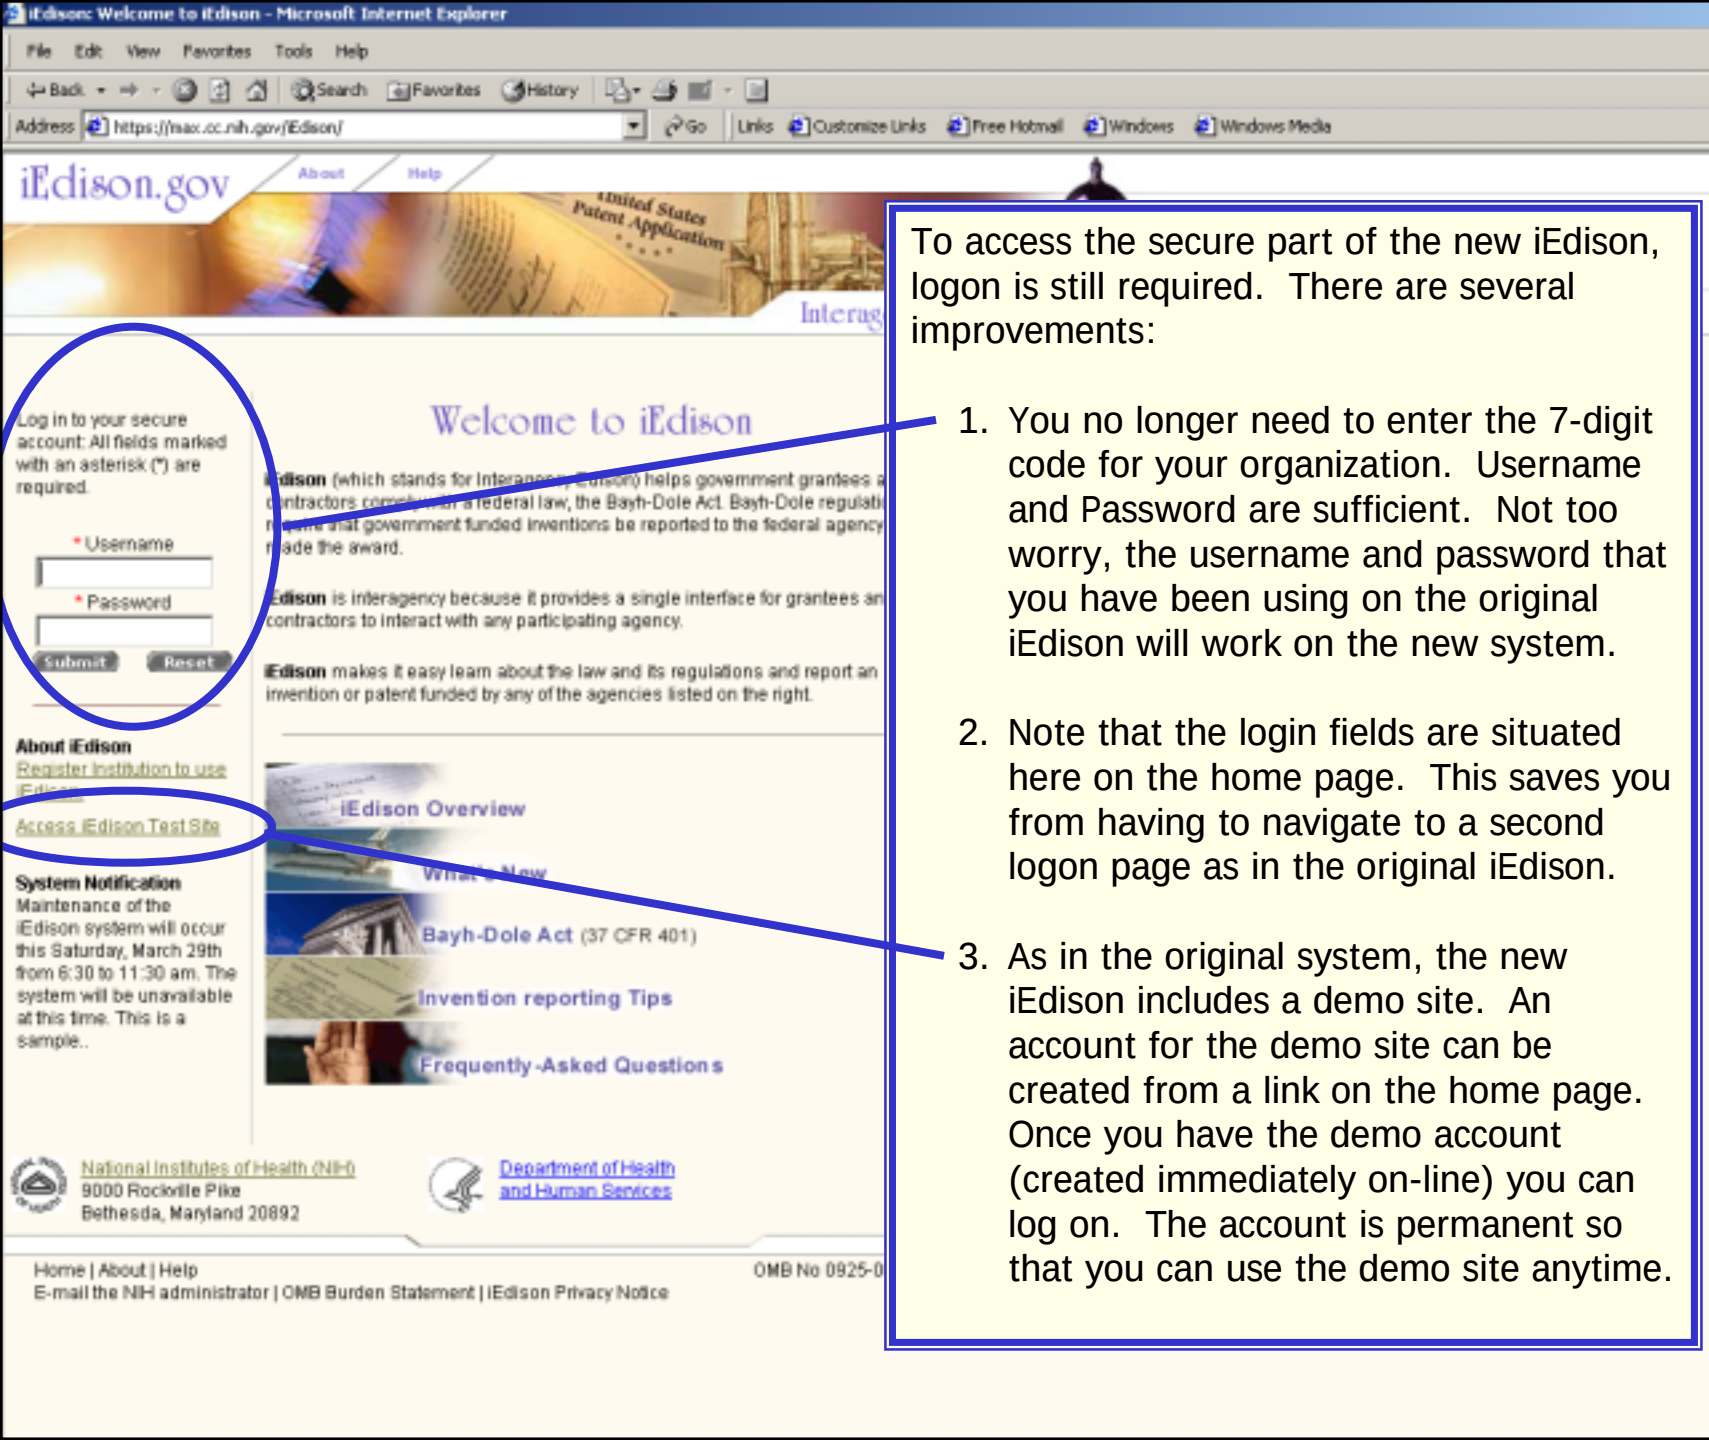
iEdison agency-specific information is now found on the right side of the home page.
In addition to links to each of the agencies, the new iEdison also provides specific contact information for Bayh-Dole administration for each agency.



To access the secure part of the new iEdison, logon is still required. There are several improvements:

1. You no longer need to enter the 7-digit code for your organization. Username and Password are sufficient. Not too worry, the username and password that you have been using on the original iEdison will work on the new system.

2. Note that the login fields are situated here on the home page. This saves you from having to navigate to a second logon page as in the original iEdison.

3. As in the original system, the new iEdison includes a demo site. An account for the demo site can be created from a link on the home page. Once you have the demo account (created immediately on-line) you can log on. The account is permanent so that you can use the demo site anytime.

Other important features on the new iEdison home page include:

- A completely re-designed help system. At the top of each page you will find general help that can be accessed at any time, and opens in a new browser window.
- In addition to general help, specific sections of each page have question mark icons. Click the icon to open detailed help (again, in a separate browser window) that includes definitions fields, as well as links to general help topics.
- A link to request registration of any organization to submit invention reports.
- A section devoted to iEdison system status. Notifications of any change in the operation of the system are provided here.
- iEdison gives you links which offer additional useful information at the lower left side of the home page.

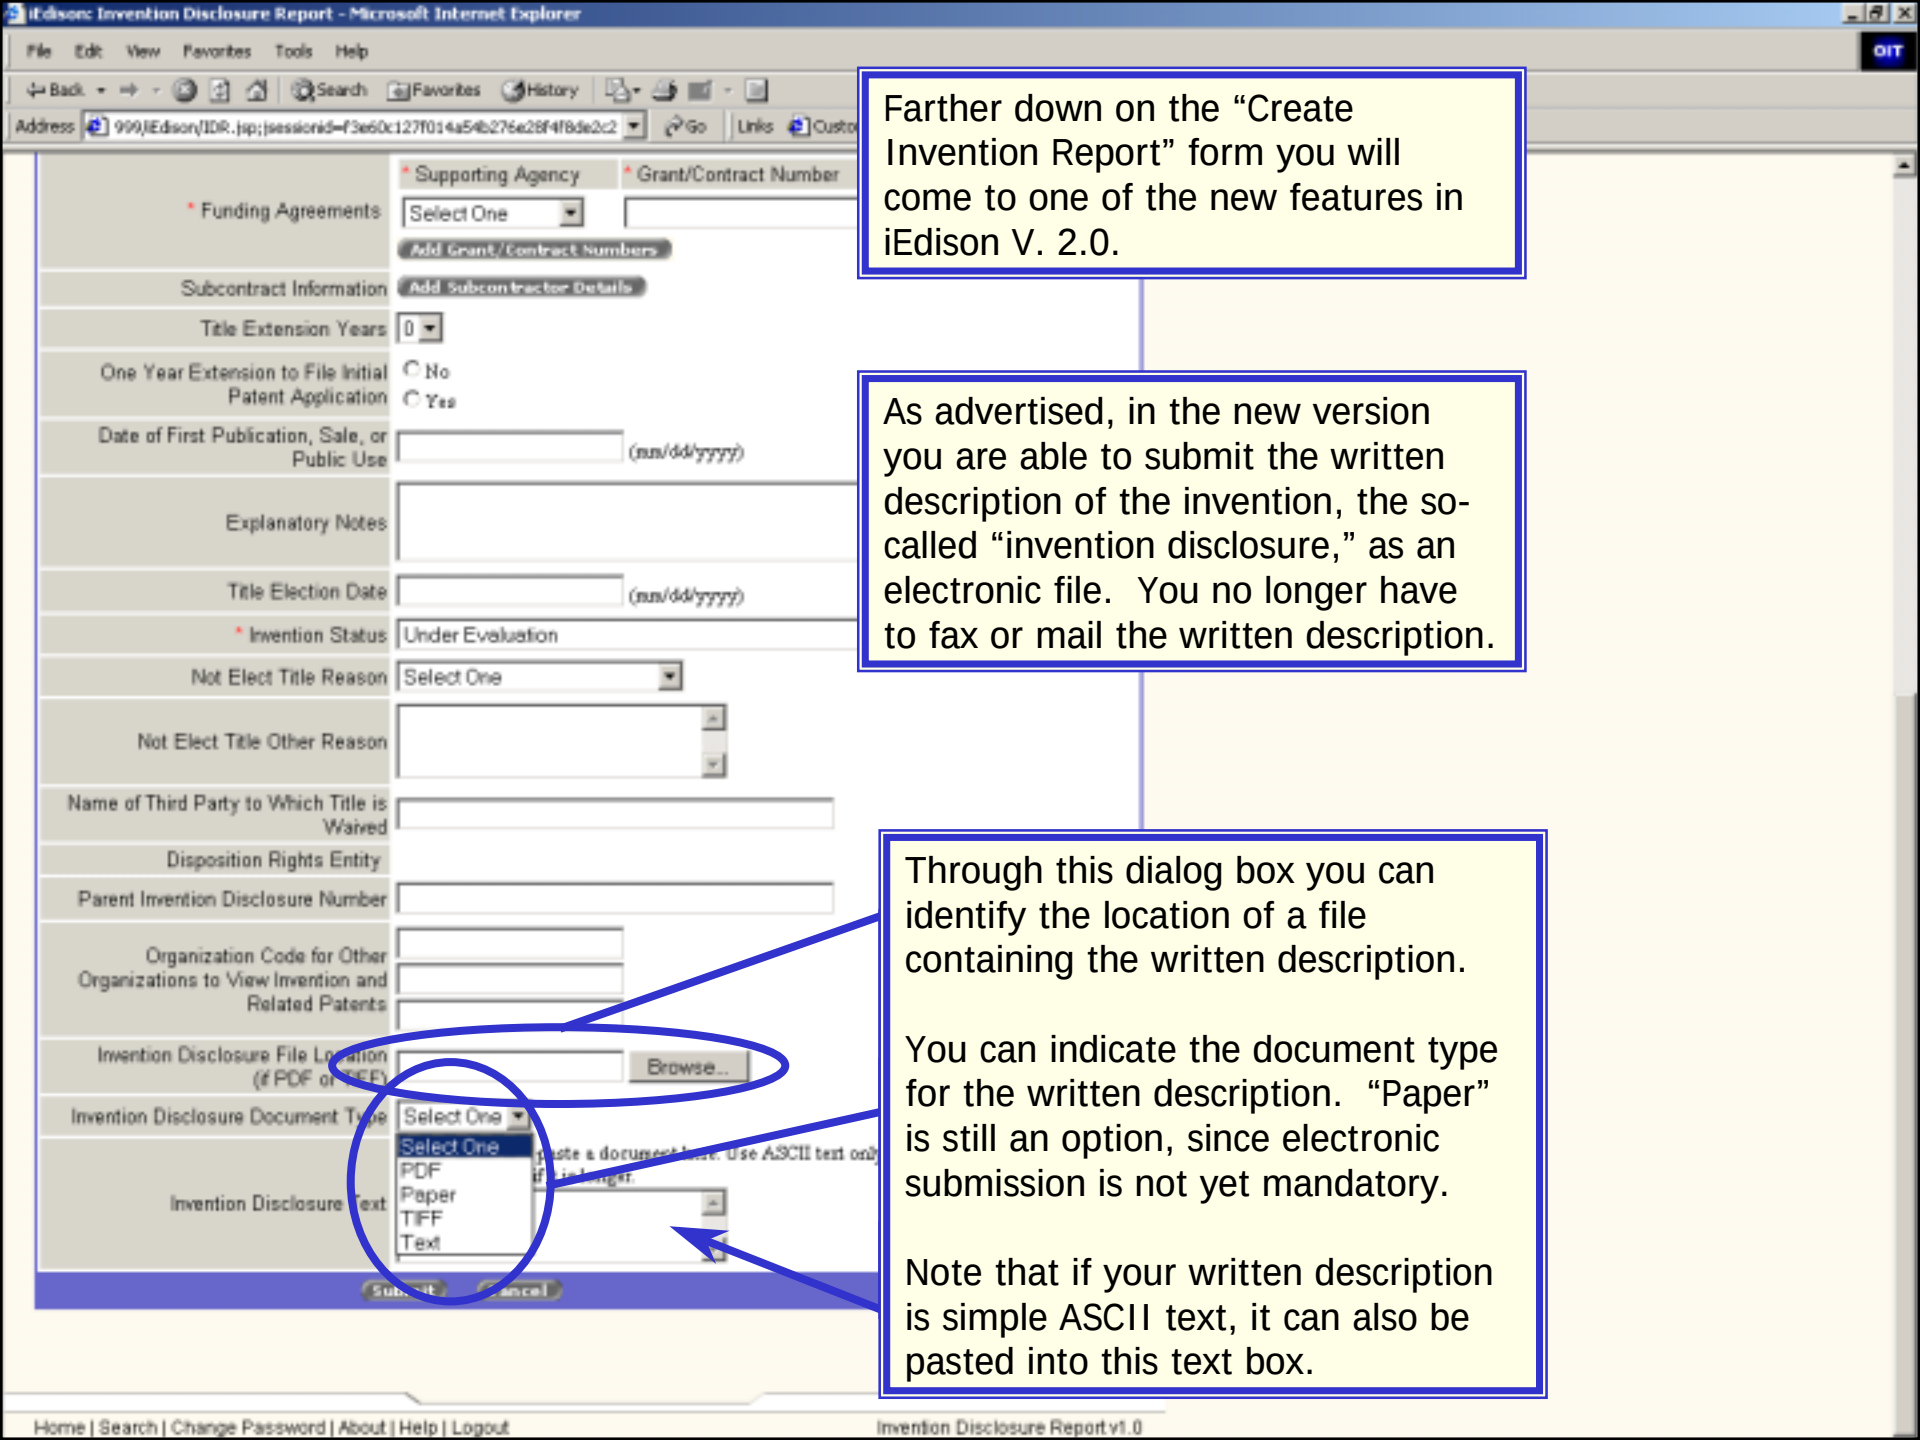
Explanatory Notes
The “look and feel” of the new interface is really the only difference in creating a new Invention Report.
The interactive form requires the same types of information as in the original iEdison.
For example, a pick list of all iEdison participating agencies is offered to select the primary agency, i.e. the agency to whom the Invention Report is being submitted.



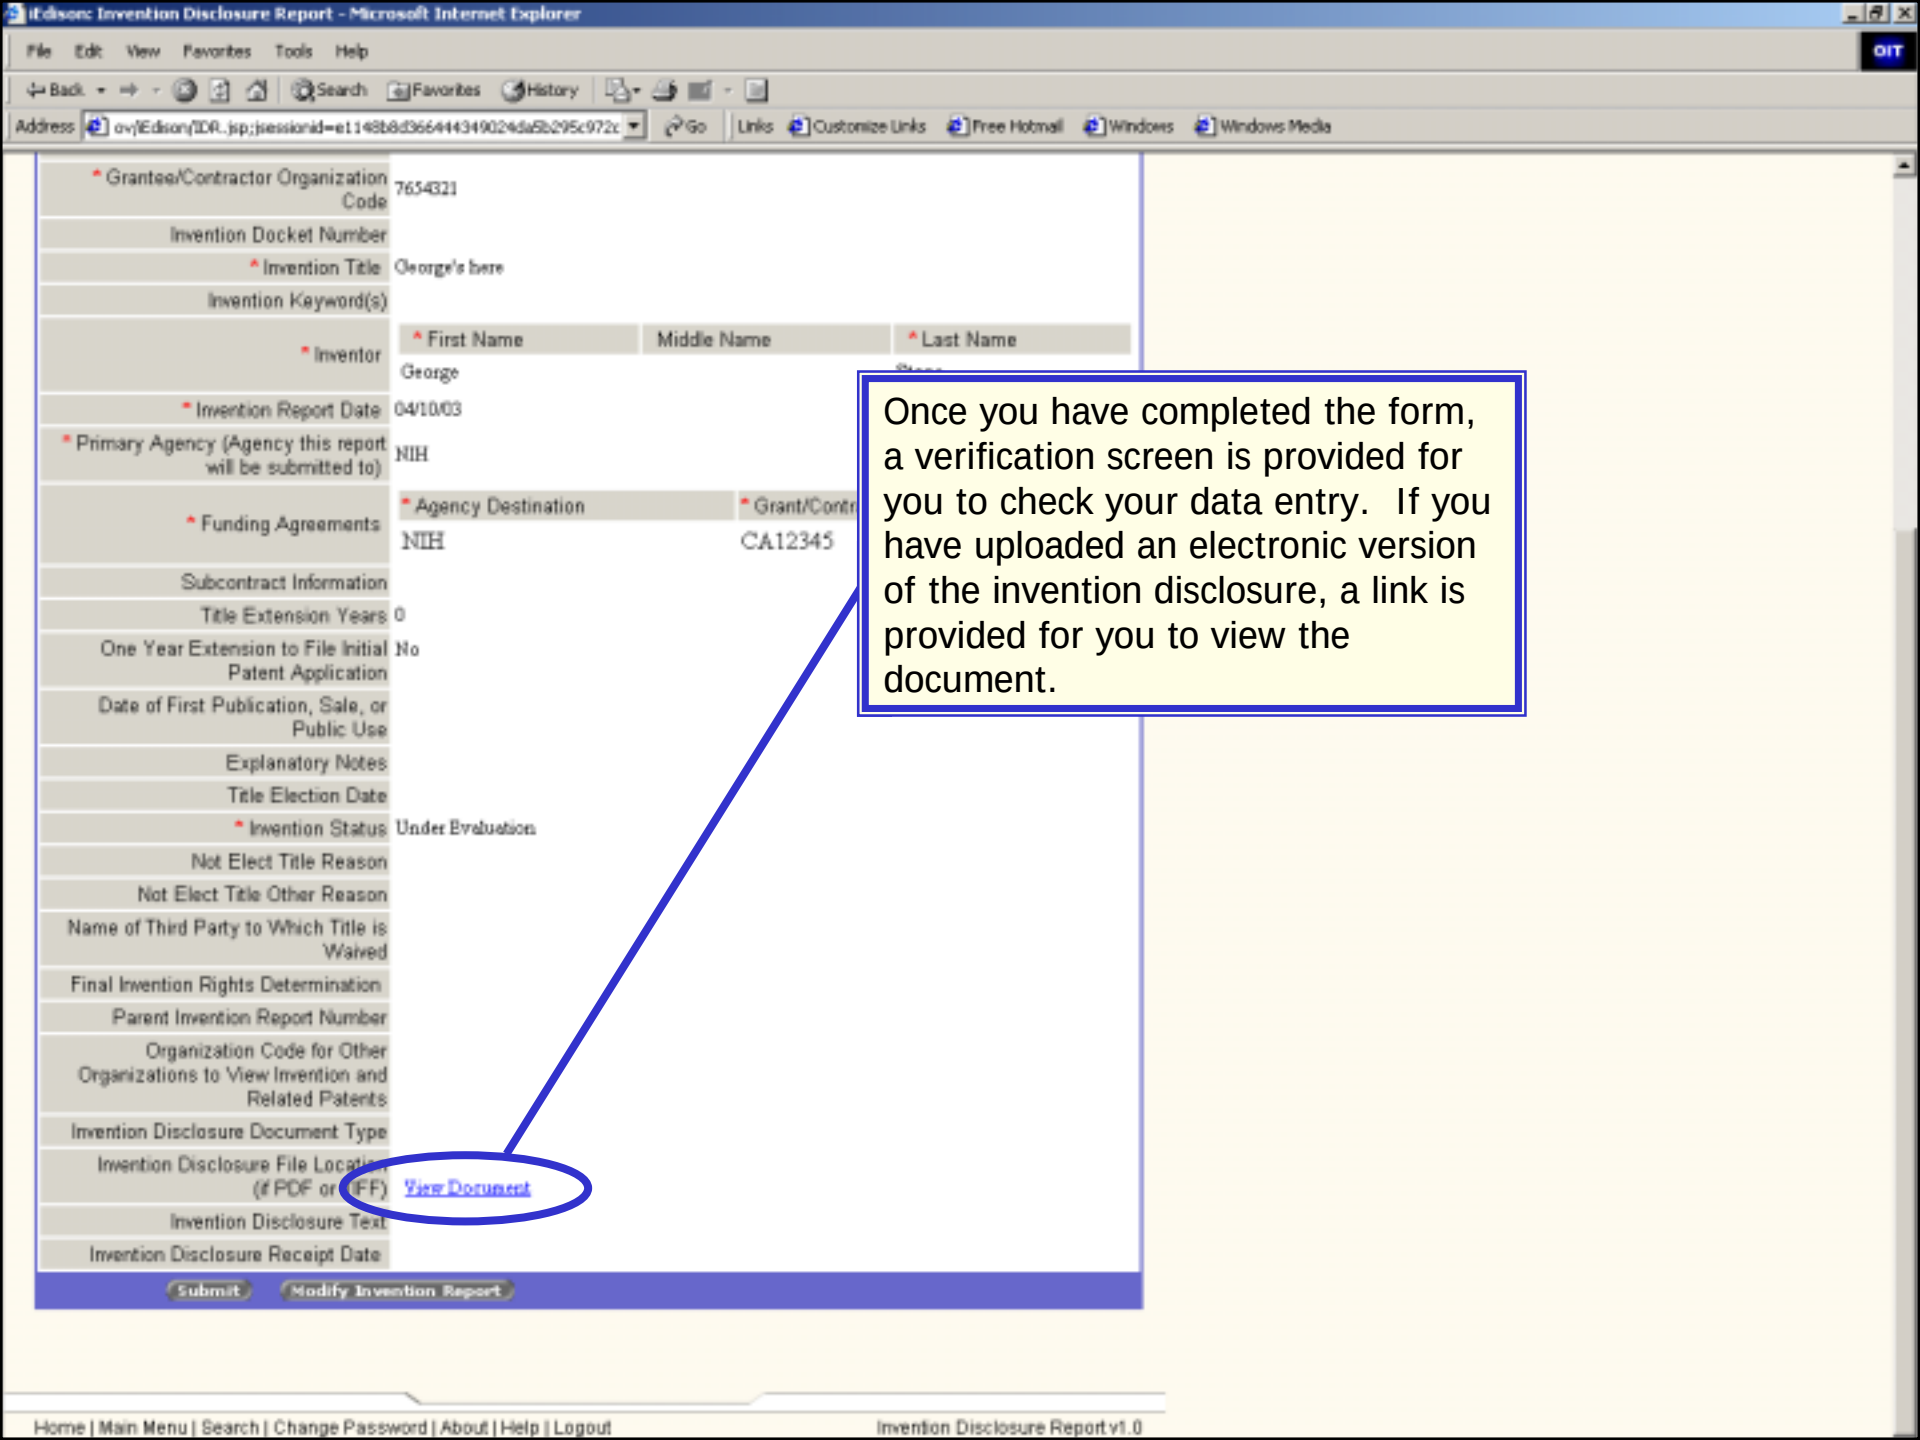
Farther down on the “Create Invention Report” form you will come to one of the new features in iEdison V. 2.0.

As advertised, in the new version you are able to submit the written description of the invention, the so-called “invention disclosure,” as an electronic file. You no longer have to fax or mail the written description.

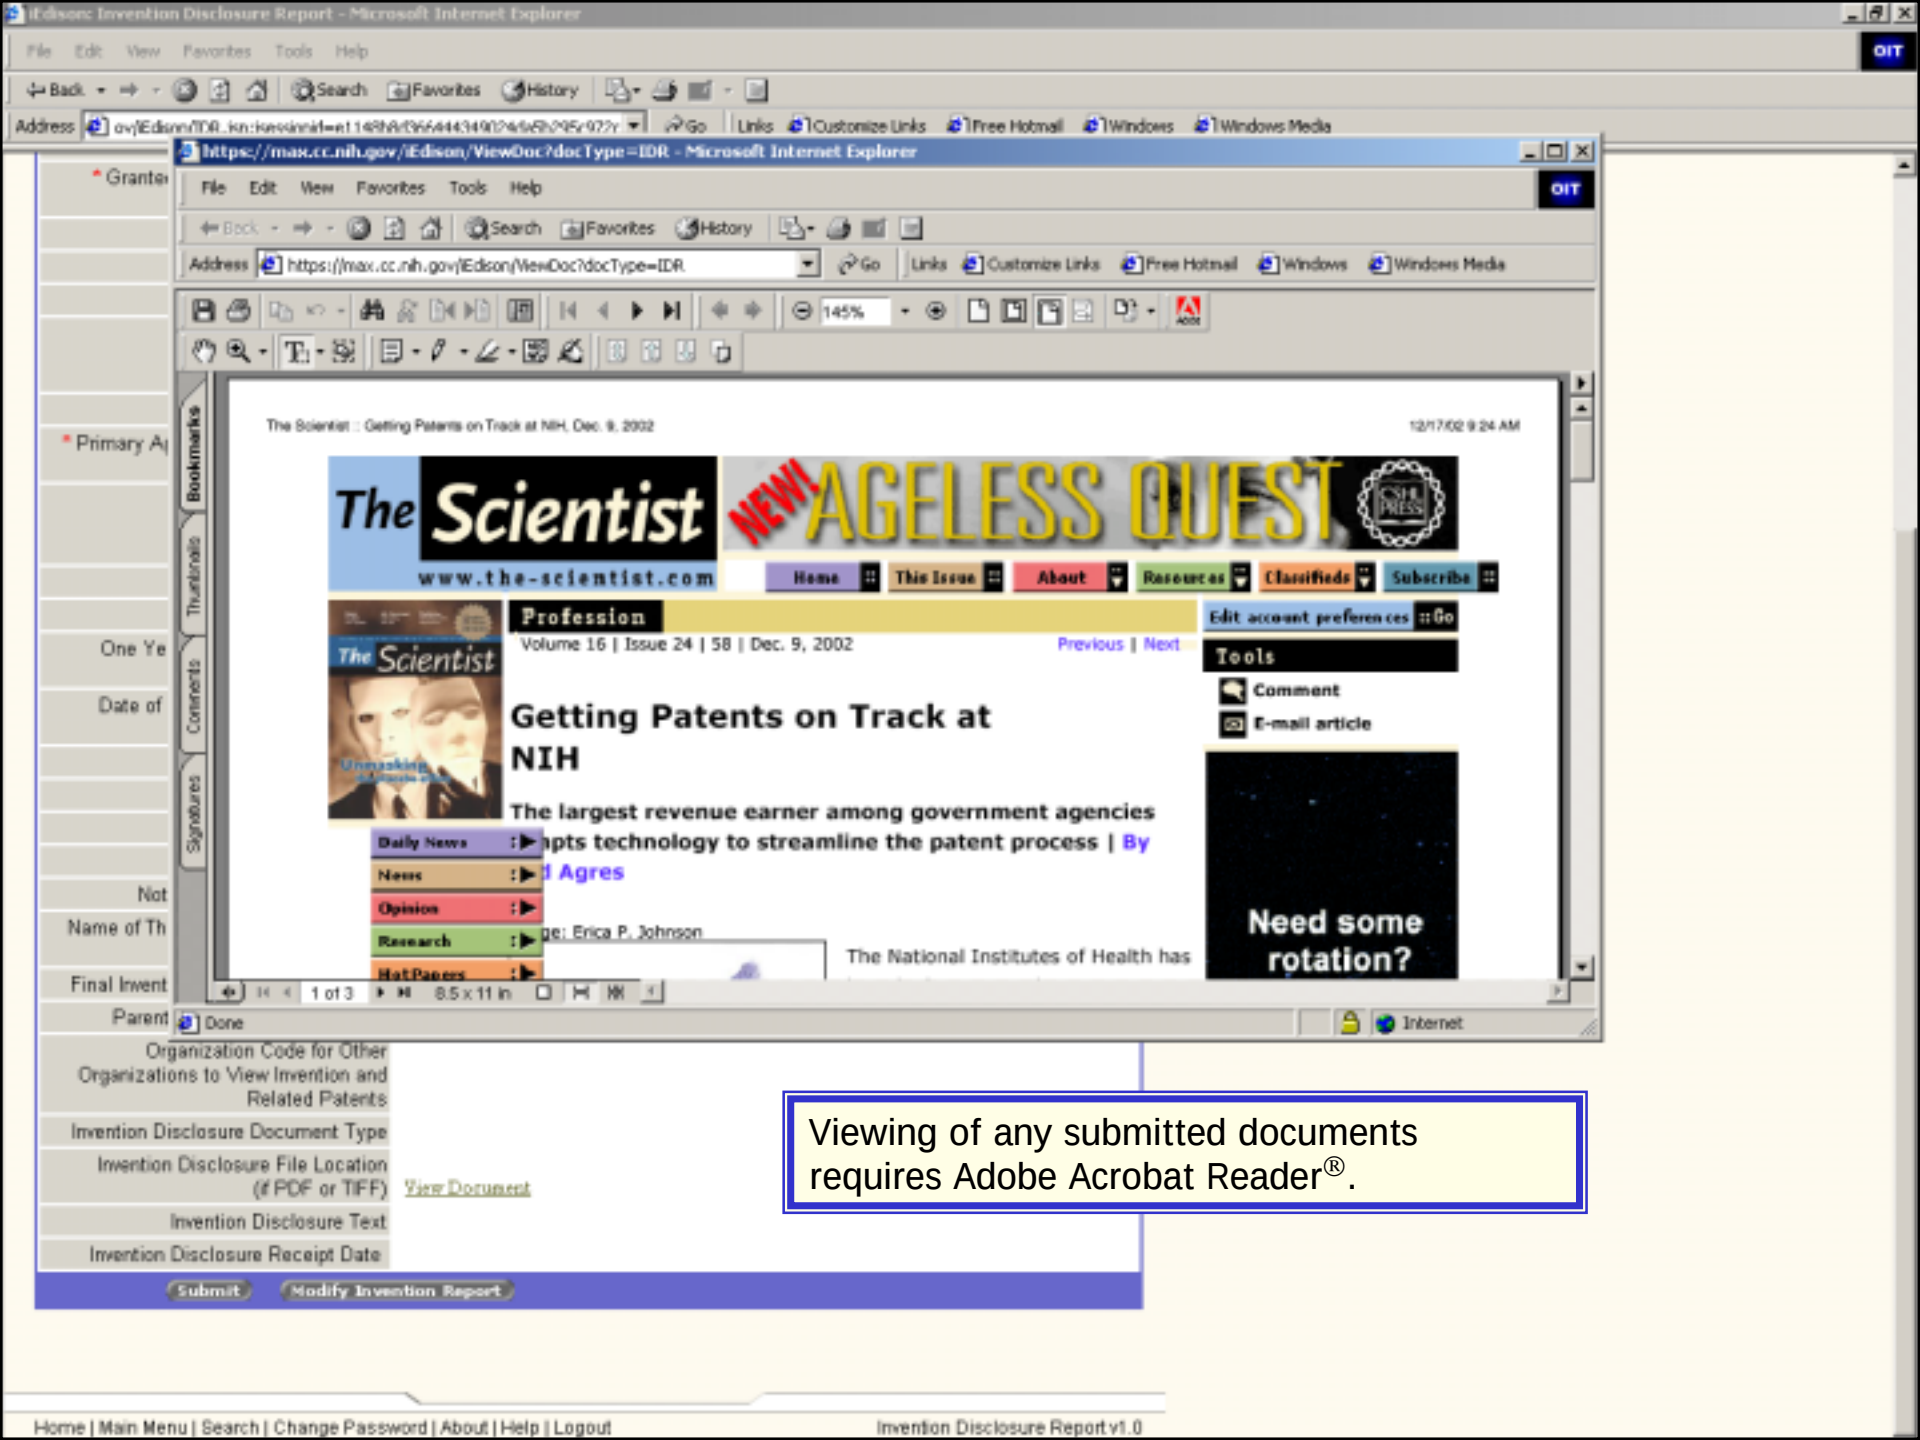
Through this dialog box you can identify the location of a file containing the written description.

You can indicate the document type for the written description. “Paper” is still an option, since electronic submission is not yet mandatory.

Note that if your written description is simple ASCII text, it can also be pasted into this text box.



Once you have completed the form, a verification screen is provided for you to check your data entry. If you have uploaded an electronic version of the invention disclosure, a link is provided for you to view the document.



Viewing of any submitted documents requires Adobe Acrobat Reader®.

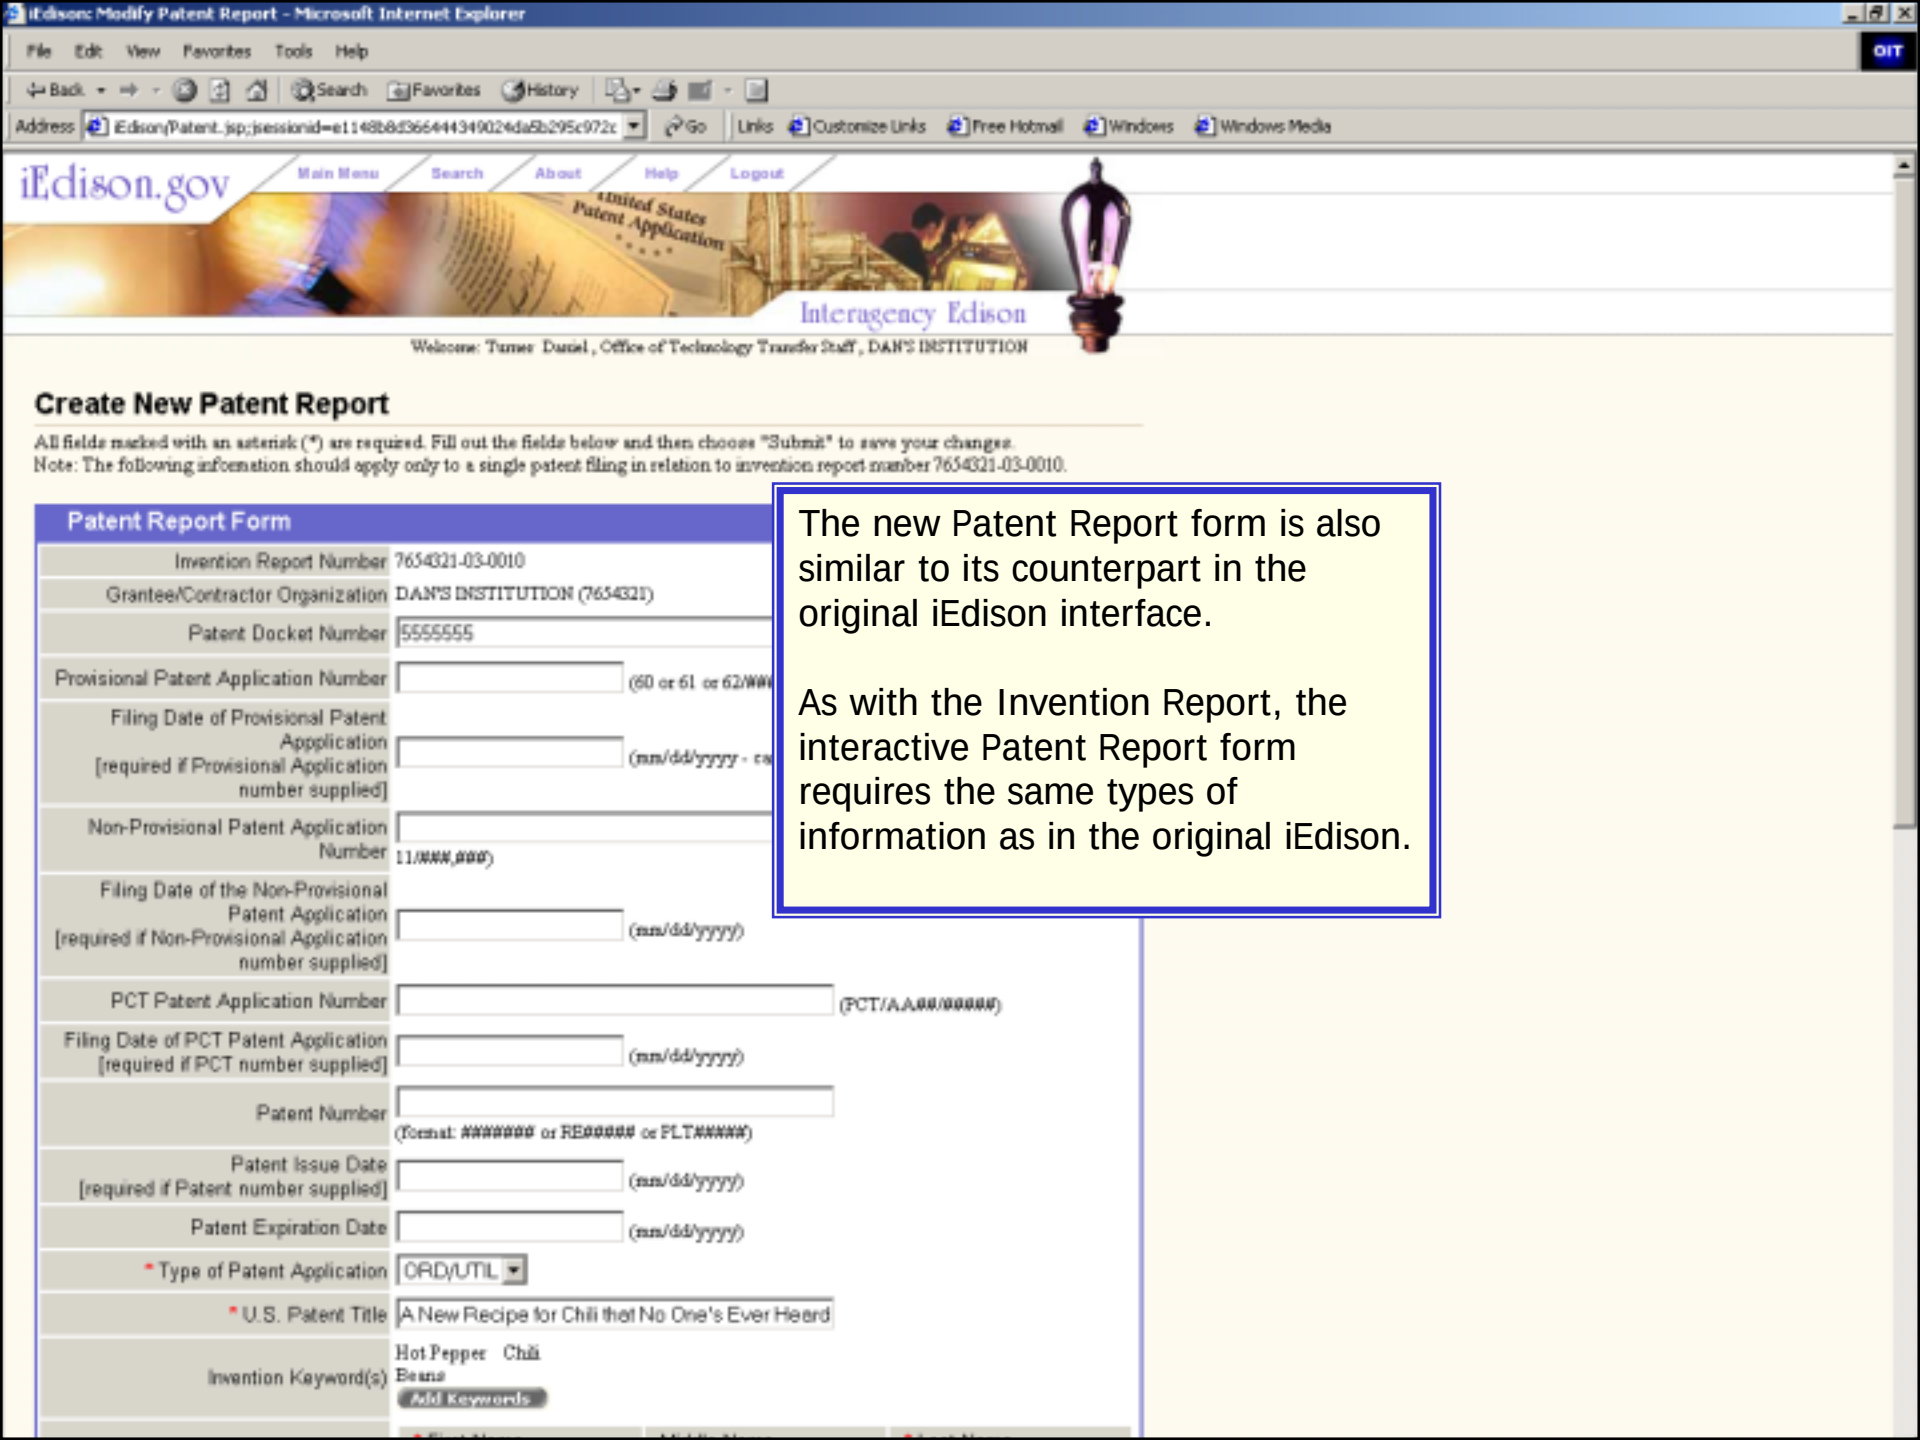
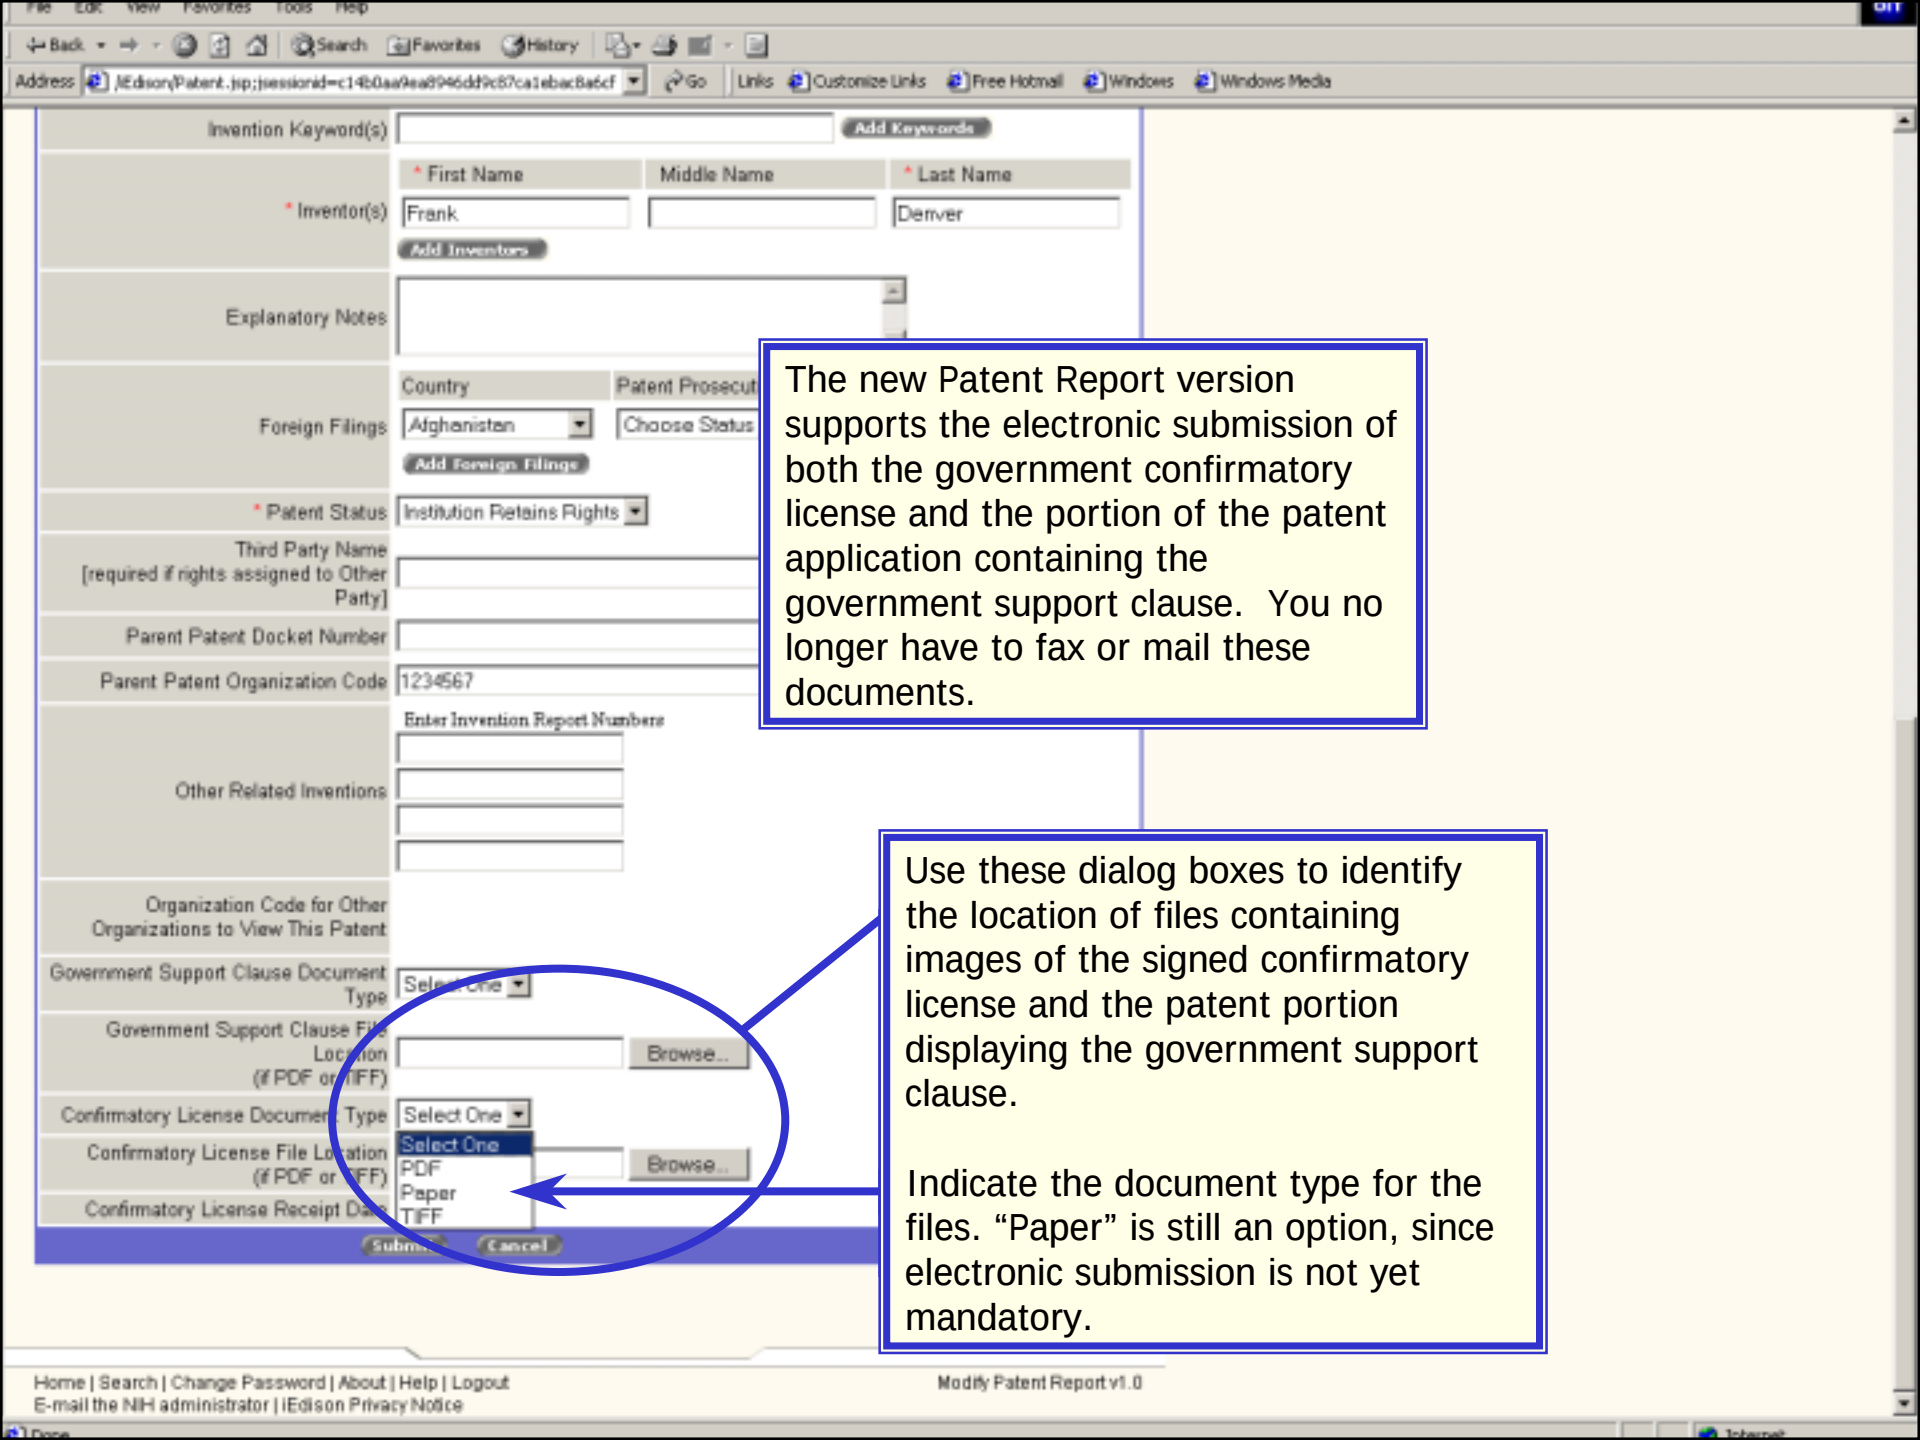
Invention Disclosure Report v1.0
As in the original iEdison version, once the new or modified record has been finally committed to the database, a confirmation screen is displayed. The detail includes mention of the EIR number assigned to the record.

Introduction to Interagency Edison, Version 2
Part 4: The Patent Report



The new Patent Report form is also similar to its counterpart in the original iEdison interface.

As with the Invention Report, the interactive Patent Report form requires the same types of information as in the original iEdison.



The new Patent Report version supports the electronic submission of both the government confirmatory license and the portion of the patent application containing the government support clause. You no longer have to fax or mail these documents.

Use these dialog boxes to identify the location of files containing images of the signed confirmatory license and the patent portion displaying the government support clause.

Indicate the document type for the files. “Paper” is still an option, since electronic submission is not yet mandatory.

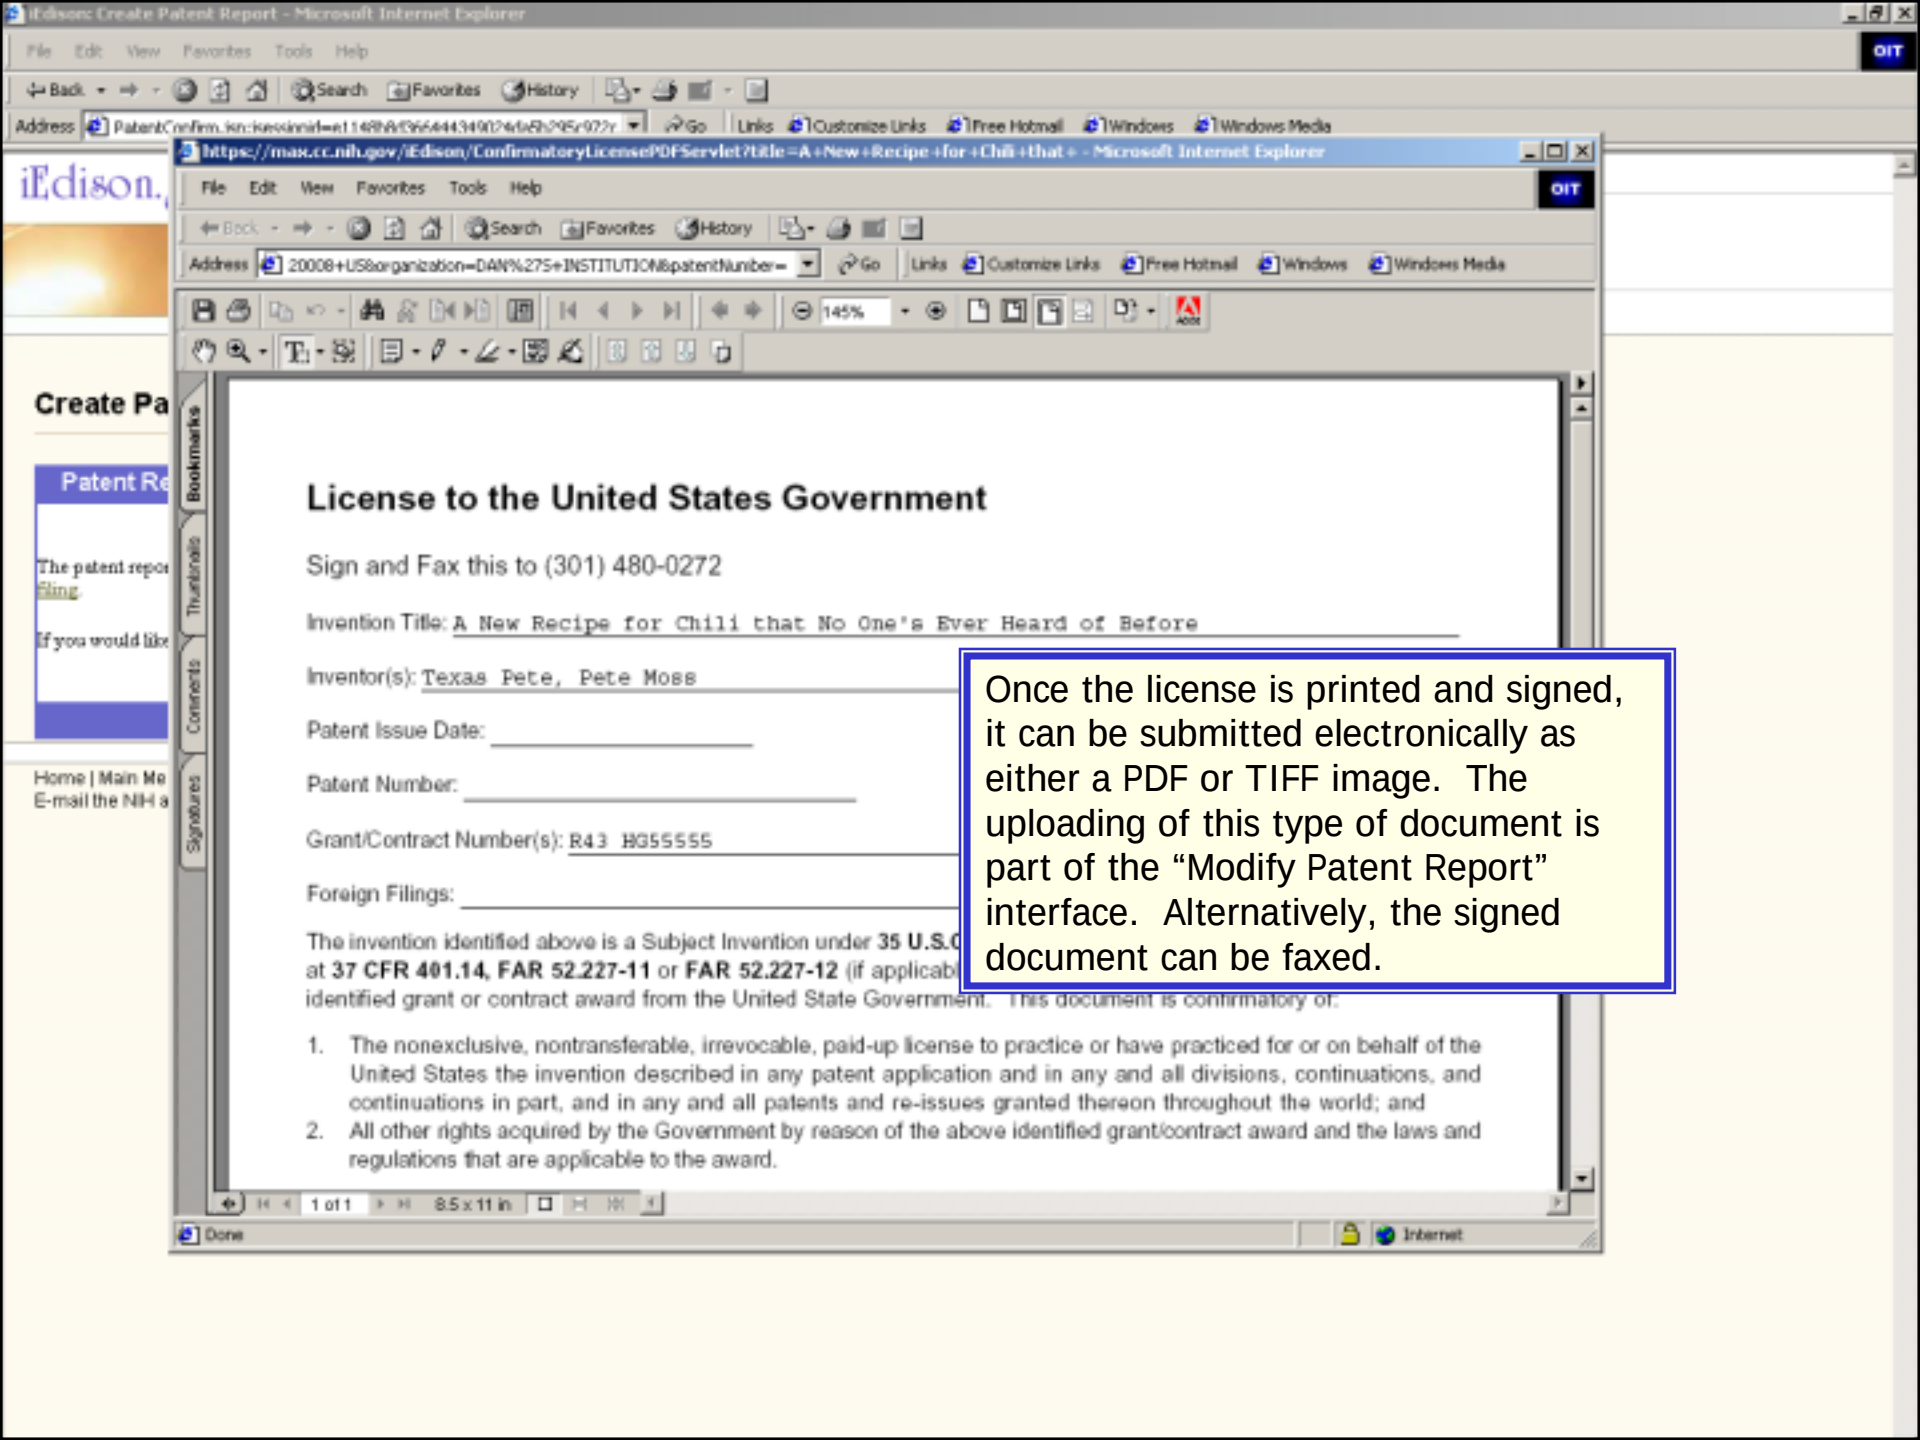
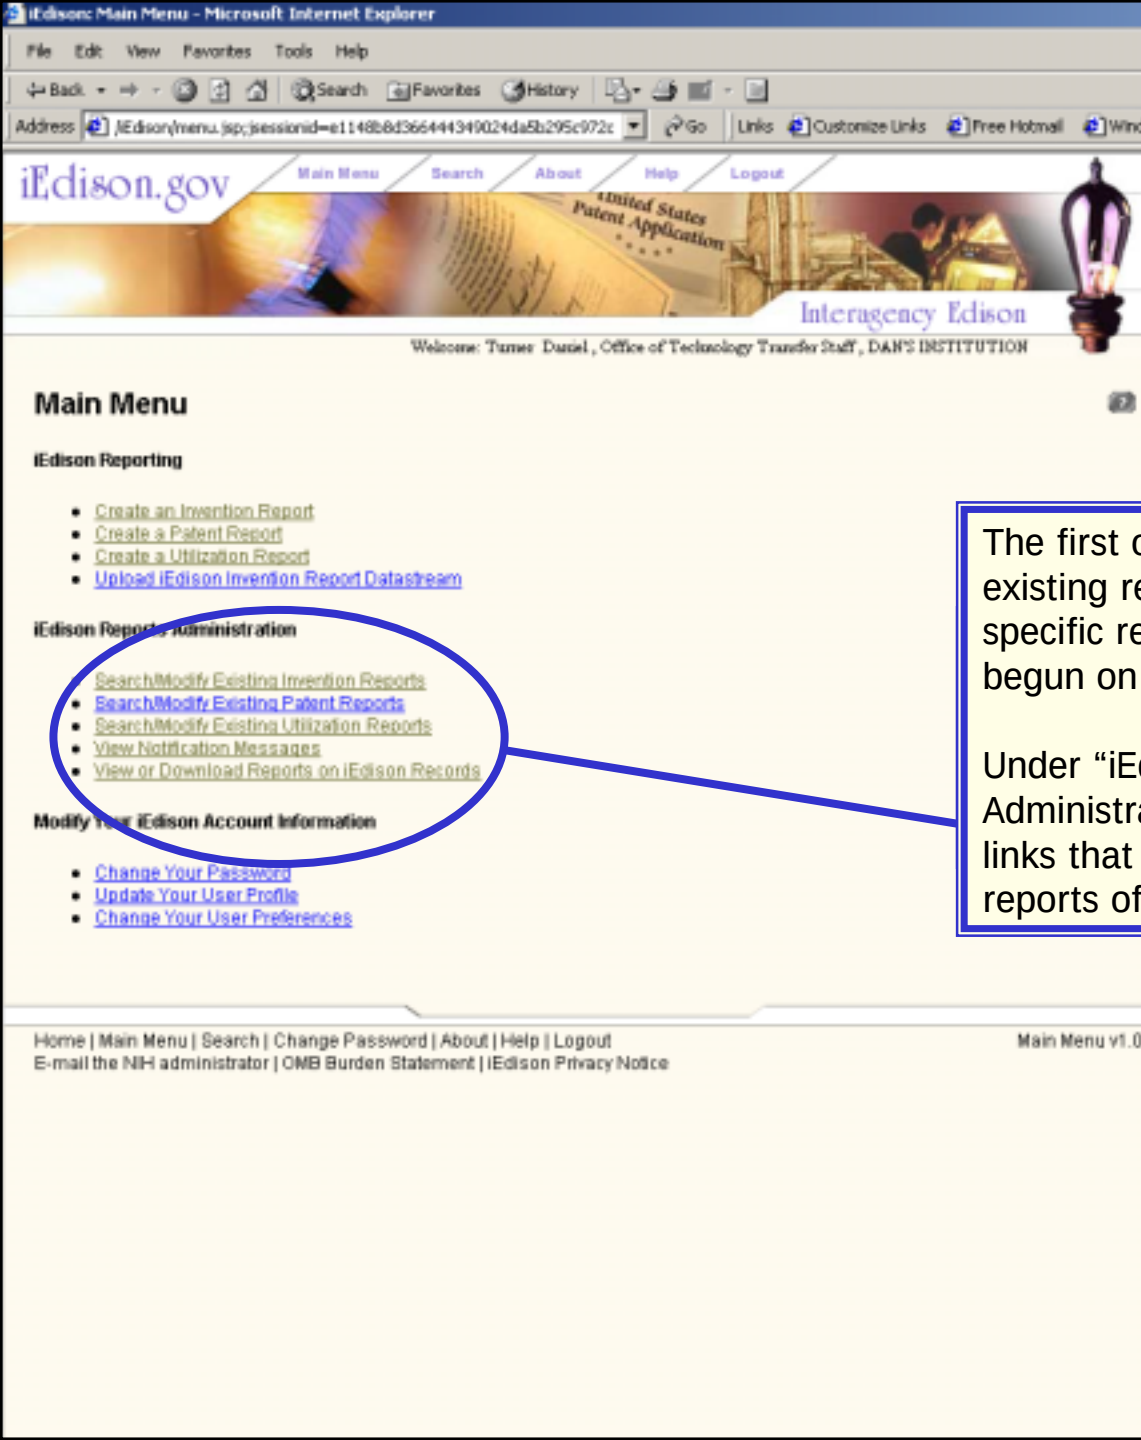
Create Patent Report v1.0
As with the invention report, a confirmation screen is displayed once the new or modified patent report has been finally committed to the database. In the case of a patent report, the patent docket number is provided for reference.
Regulations require that with the filing of a patent application, the grantee/contractor must submit an executed confirmatory license to the awarding government agency. iEdison assists in the compliance of this requirement by creating the license document. The button at the bottom of the confirmation screen creates a printable version of the document.



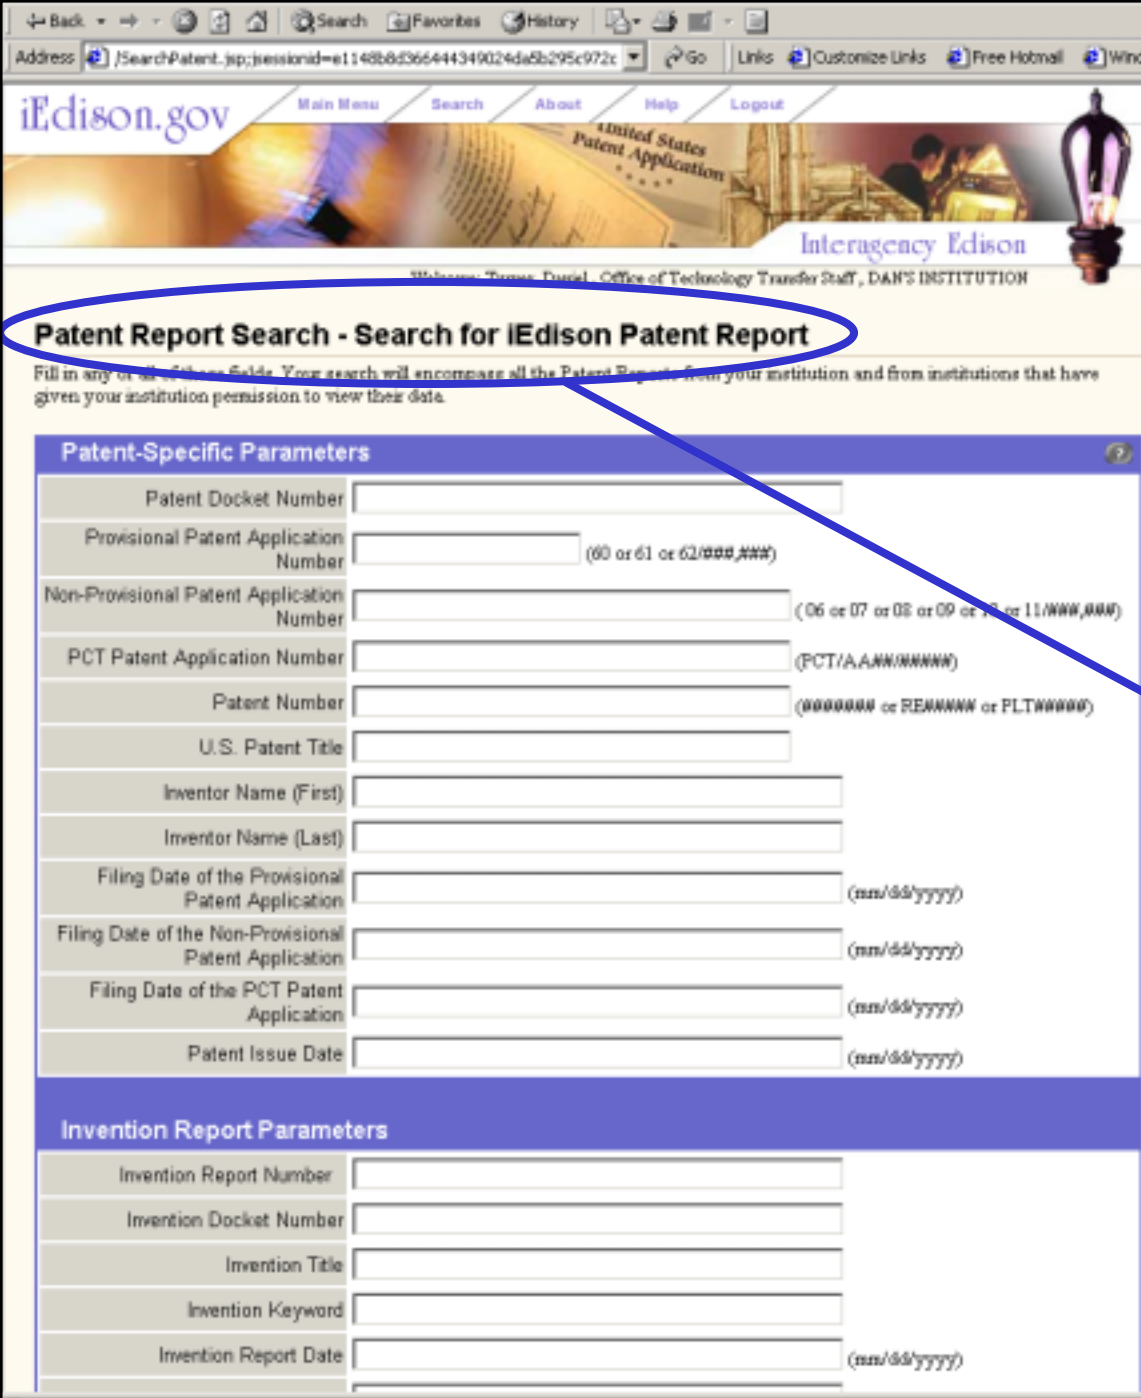
License to the United States Government
Sign and Fax this to (301) 480-0272
Invention Title: A New Recipe for Chili that No One's Ever Heard of Before
Inventor(s): Texas Pete, Pete Moss
Patent Issue Date:
Patent Number:
Grant/Contract Number(s): R43 HG55555
Foreign Filings:
The invention identified above is a Subject Invention under 35 U.S.C
at 37 CFR 401.14, FAR 52.227-11 or FAR 52.227-12 (if applicab
identified grant or contract award from the United State Government. This document is confirmatory of:
1. The nonexclusive, nontransferable, irrevocable, paid-up license to practice or have practiced for or on behalf of the United States the invention described in any patent application and in any and all divisions, continuations, and continuations in part, and in any and all patents and re-issues granted thereon throughout the world; and
2. All other rights acquired by the Government by reason of the above identified grant/contract award and the laws and regulations that are applicable to the award.
Once the license is printed and signed, it can be submitted electronically as either a PDF or TIFF image. The uploading of this type of document is part of the "Modify Patent Report" interface. Alternatively, the signed document can be faxed.

Introduction to Interagency Edison, Version 2
Part 5: Modifying Existing Invention, Patent, or Utilization Reports



The first objective in modifying an existing report is to locate the specific record. This process is begun on the Main Menu page.

Under “iEdison Reports Administration” you can select from links that are specific to modifying reports of the various types.



To search for a specific record, you are presented with a query form. The form allows you to insert any number of search parameters.

The form shown at the left is specific for searching for a patent record to be modified. A similar search form would be provided for searching for an invention report.

To complete the query, you can enter as few or many terms as you want. If no terms are entered, the query will return all invention or patent records for your organization.

The search will result in a list of records that meet your query parameters. Each record will be summarized with enough information to allow you to zero in on the specific record you wish to modify.

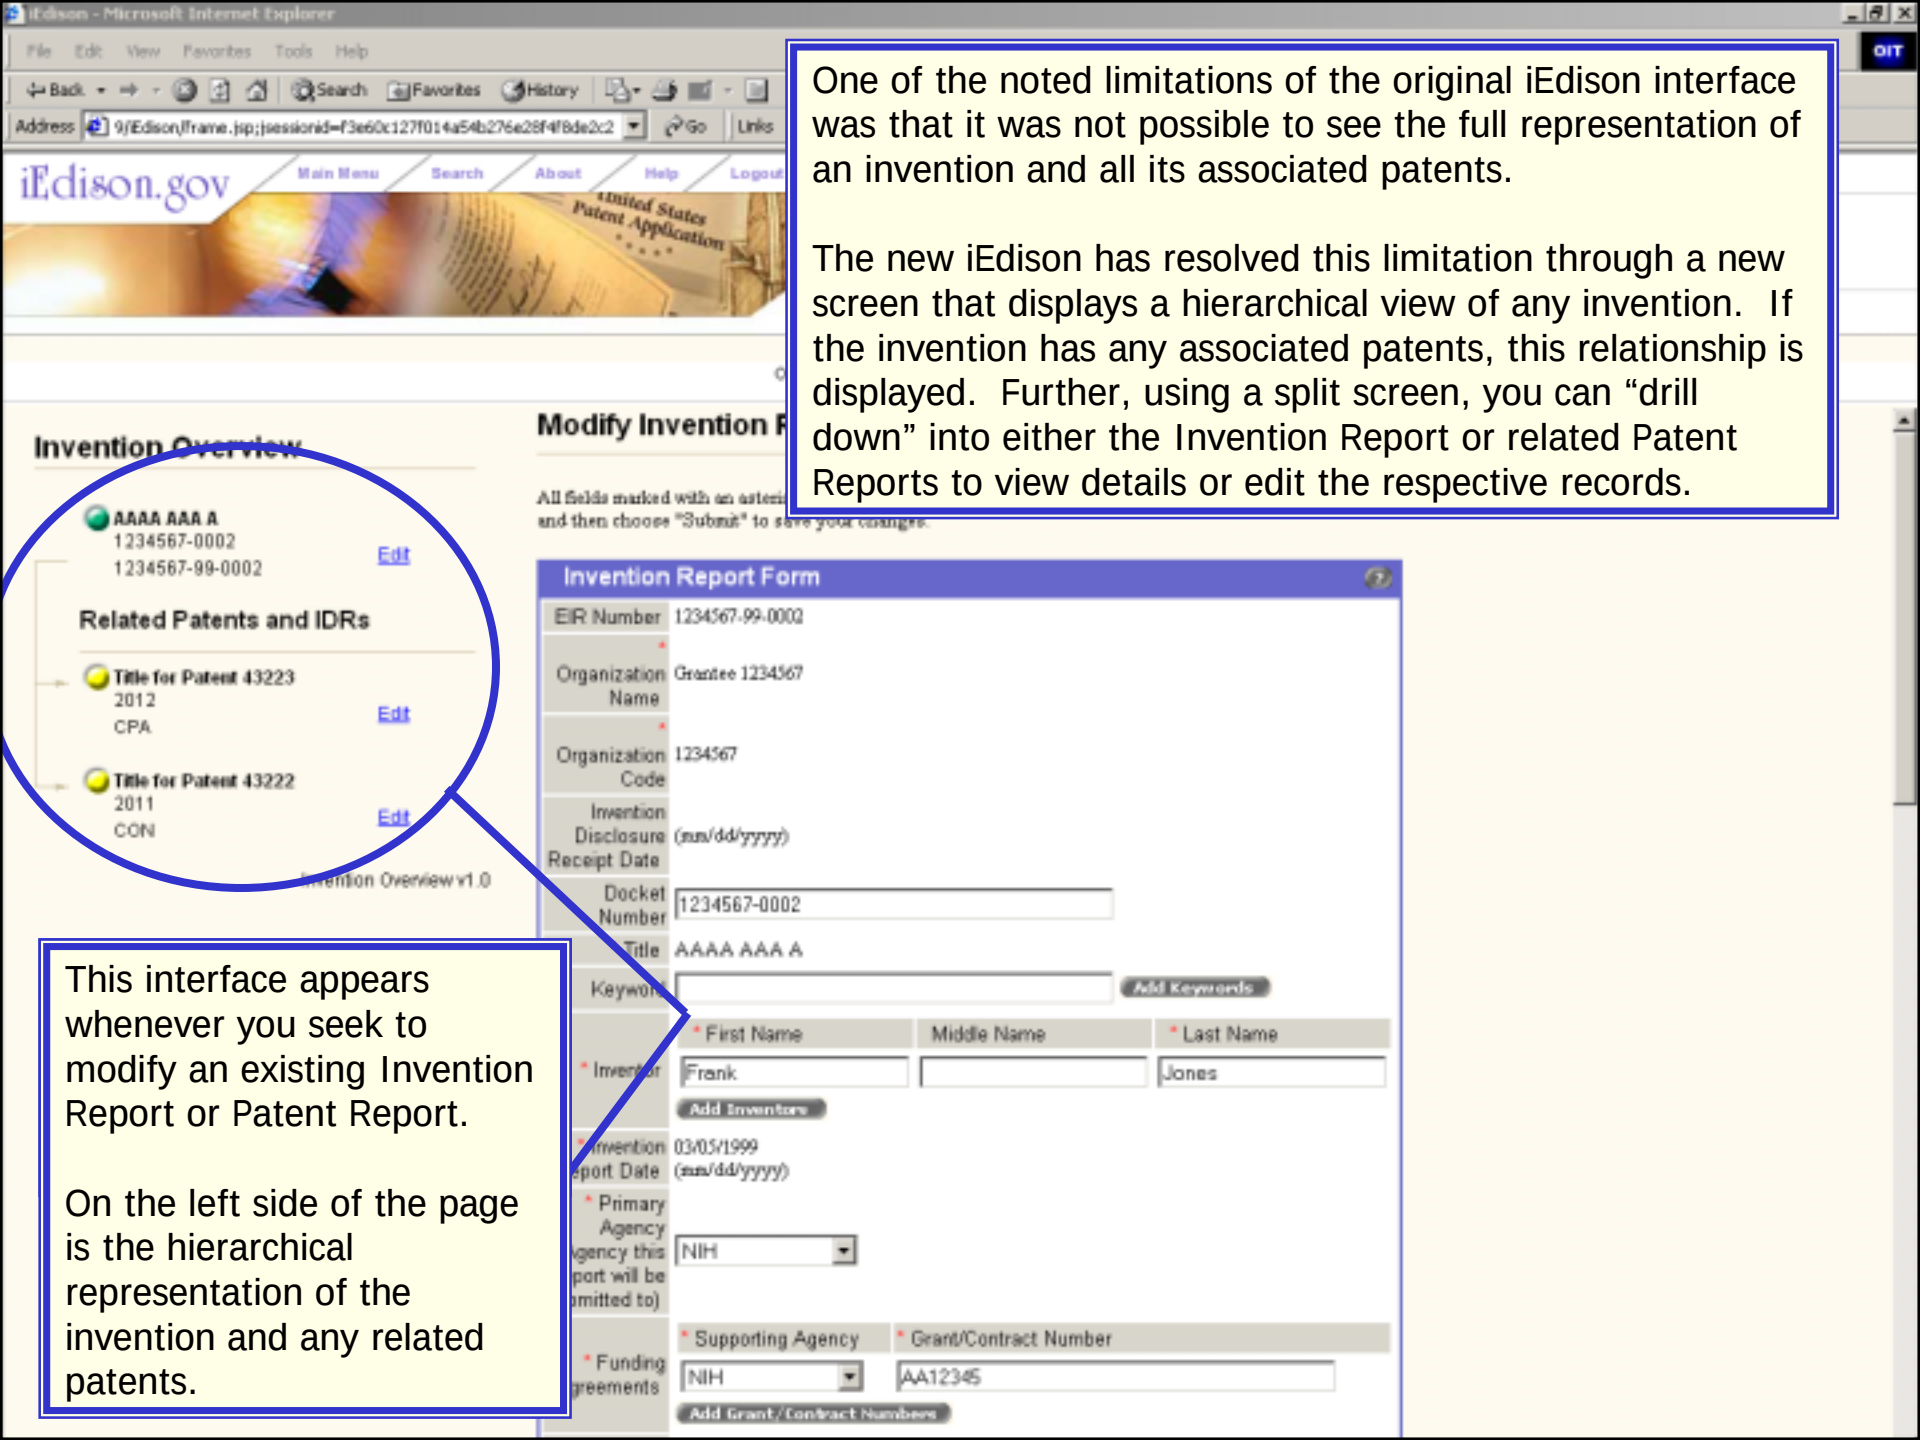
Note in the upper right corner of the search results an indication of the total number of records from your organization that meet your query parameters. Also, the interface is designed to display only 10 records at a time. This allows for improved response time for your query. if the query resulted in more than 10 records, you will be able to "page through" the total list.

You can "drill down" into any of the records shown.

Introduction to Interagency Edison, Version 2
Part 6: The Hierarchical View of an Invention and related Patents

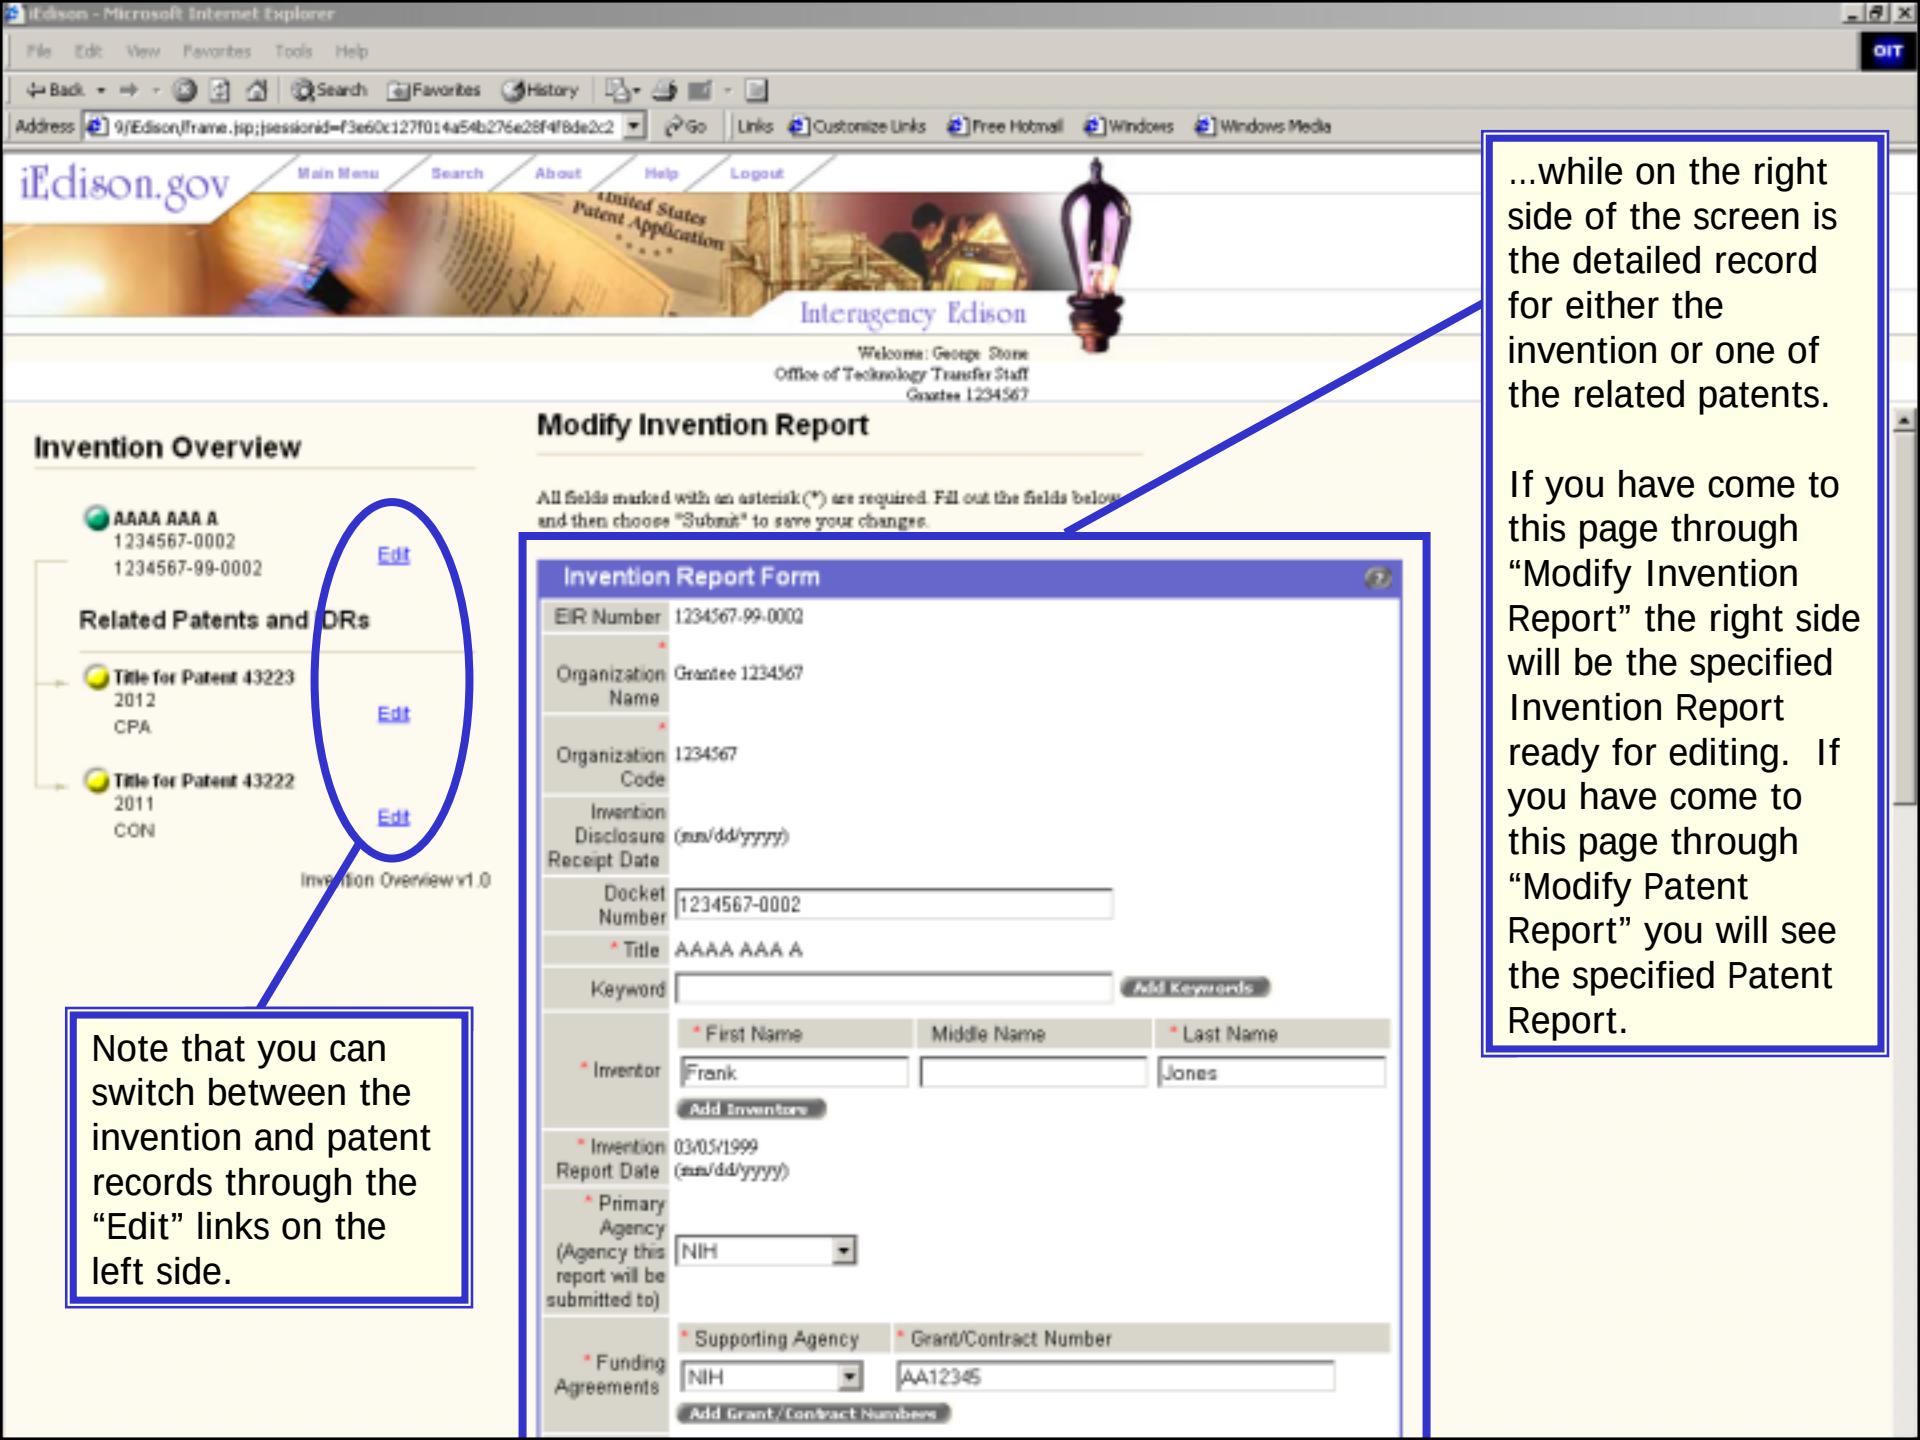
One of the noted limitations of the original iEdison interface was that it was not possible to see the full representation of an invention and all its associated patents.

The new iEdison has resolved this limitation through a new screen that displays a hierarchical view of any invention. If the invention has any associated patents, this relationship is displayed. Further, using a split screen, you can "drill down" into either the Invention Report or related Patent Reports to view details or edit the respective records.



This interface appears whenever you seek to modify an existing Invention Report or Patent Report.

On the left side of the page is the hierarchical representation of the invention and any related patents.

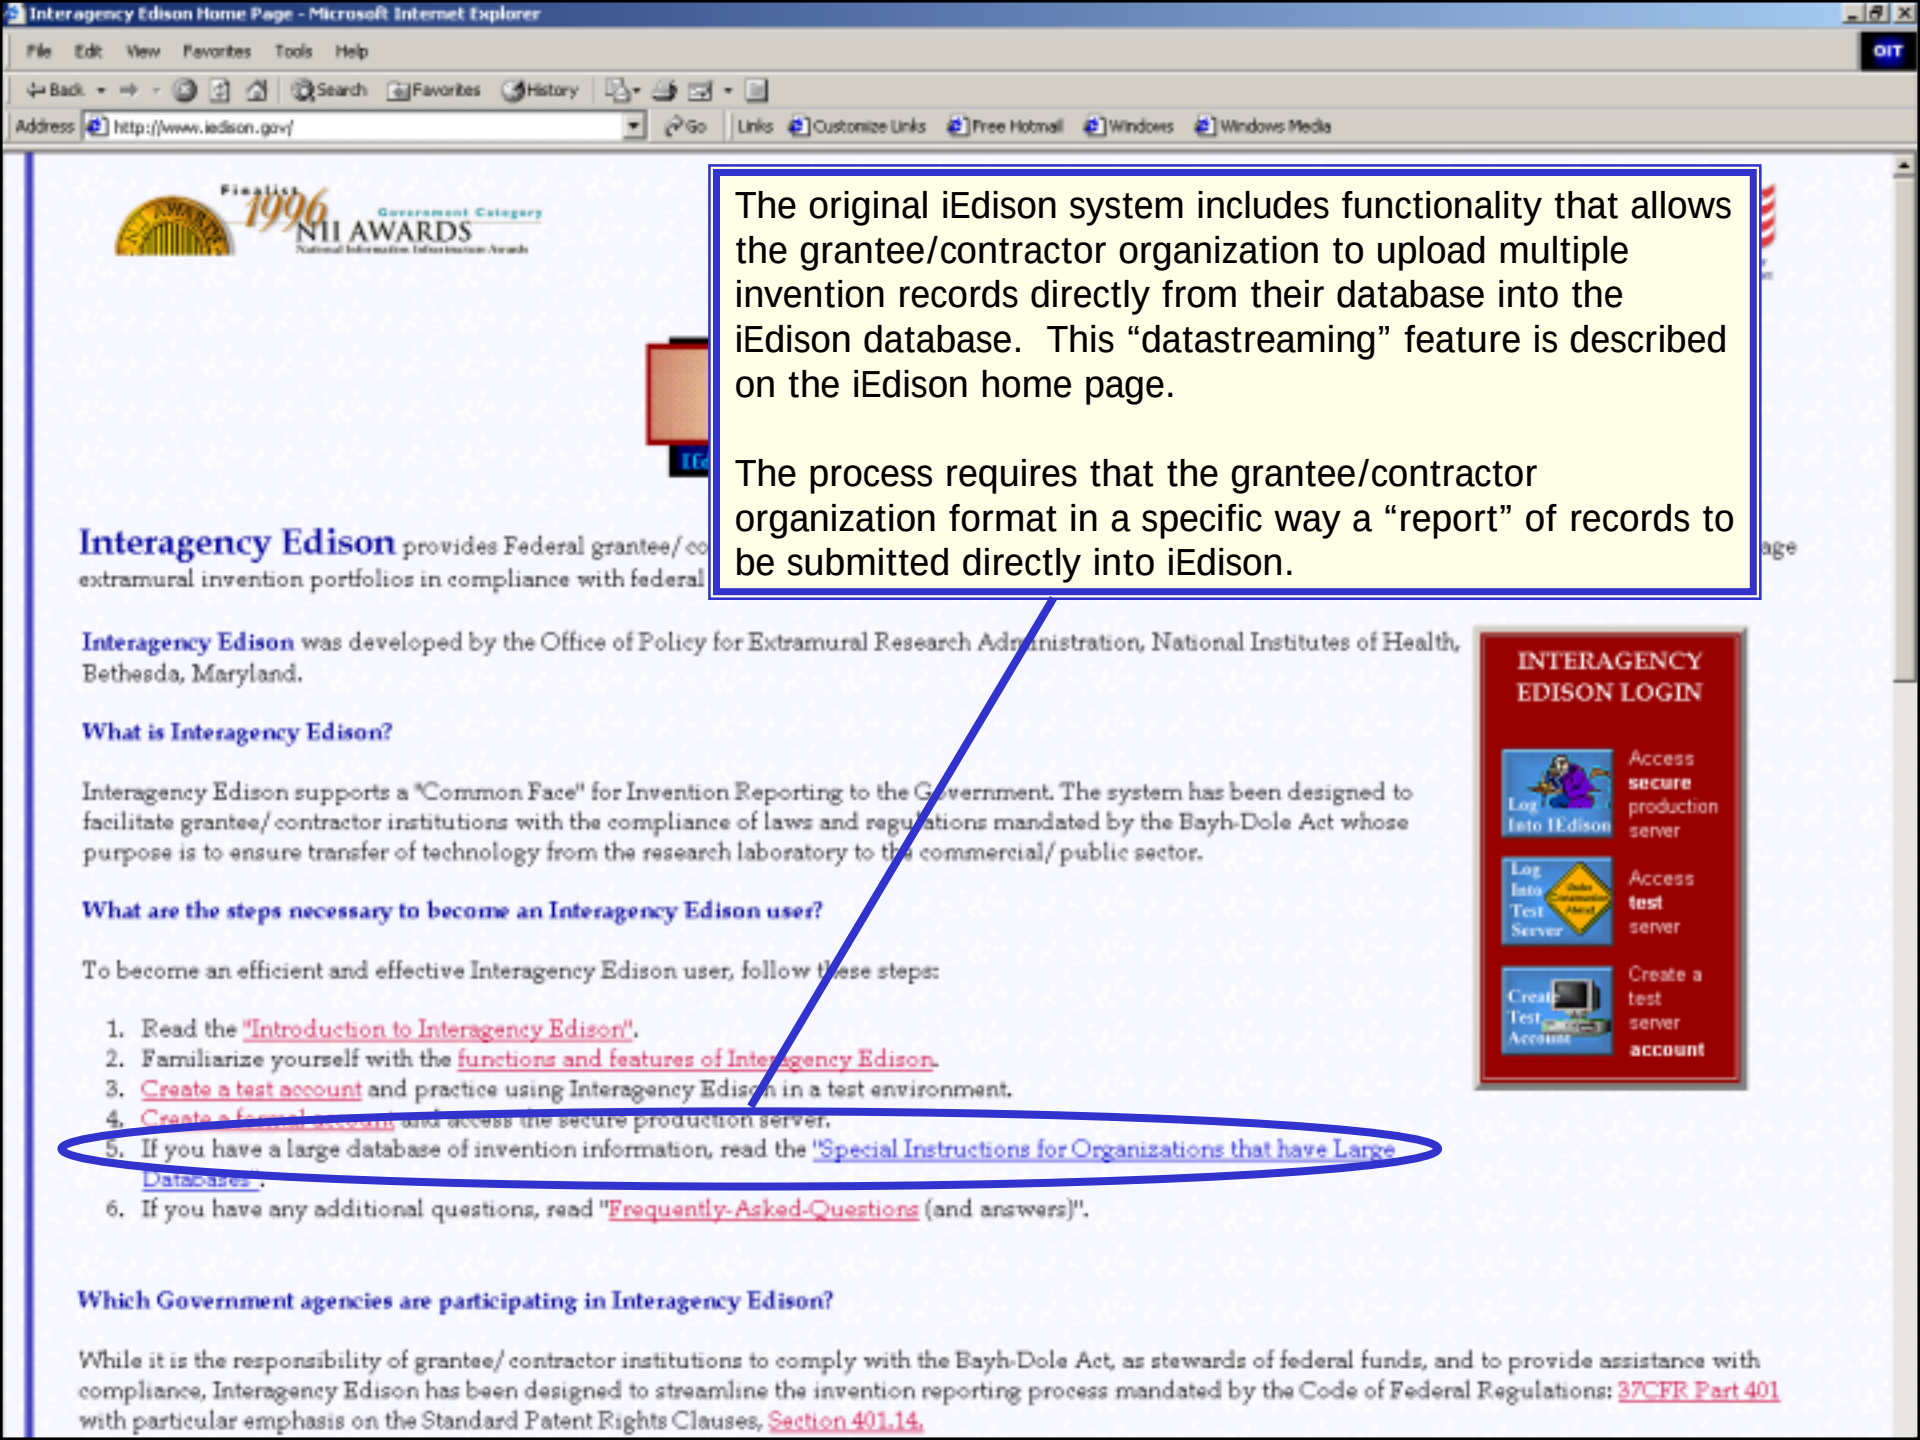


Note that you can switch between the invention and patent records through the "Edit" links on the left side.

...while on the right side of the screen is the detailed record for either the invention or one of the related patents.

If you have come to this page through "Modify Invention Report" the right side will be the specified Invention Report ready for editing. If you have come to this page through "Modify Patent Report" you will see the specified Patent Report.

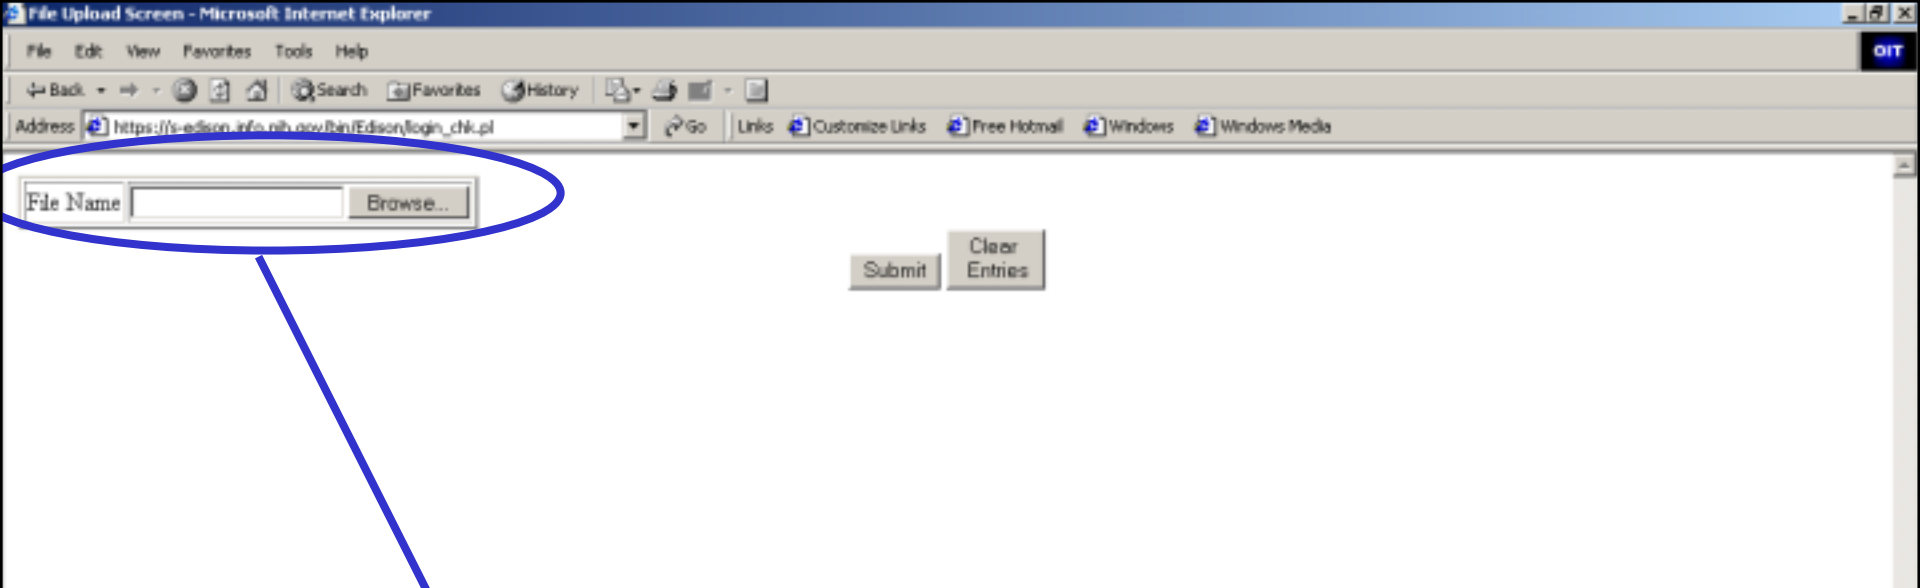
Introduction to Interagency Edison, Version 2
Part 7: Batch Uploading of Invention/Patent/Utilization Records



The original iEdison system includes functionality that allows the grantee/contractor organization to upload multiple invention records directly from their database into the iEdison database. This "datastreaming" feature is described on the iEdison home page.

The process requires that the grantee/contractor organization format in a specific way a "report" of records to be submitted directly into iEdison.

Once a “talker” account has been created and you logon with the username and password for that account...



...instead of the usual iEdison browser interface, a file upload dialog box is provided. The dialog box allows you to identify the location on your computer (or network) of the file you want to upload.

Once the file is "submitted," the iEdison system validates the information, sends you an e-mail confirmation of receipt and details as to how many records were sent, which ones were o.k. and which ones were rejected because of errors.

The errors are detailed in the e-mail so you can make corrections before re-submitting the file.

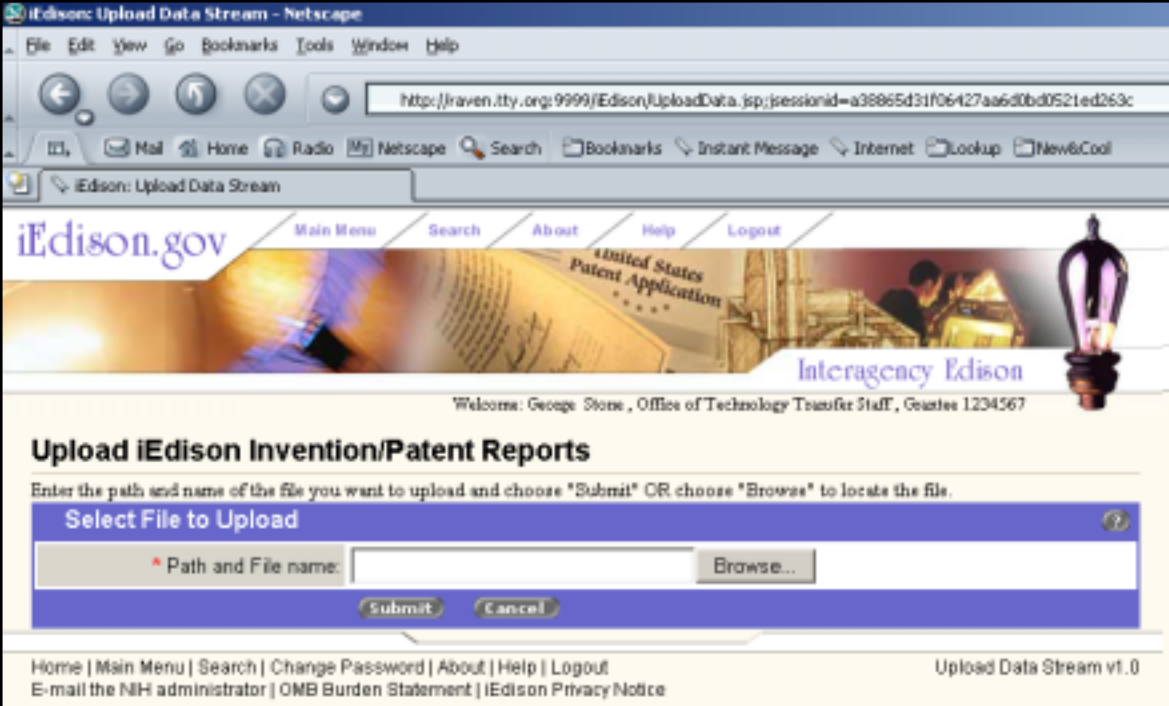
Main Menu v1.0
In the new iEdison, once you have logged on (using the same “talker” account username and password as you have been using in the original iEdison), the Main Menu offers a link to upload the datastream.



Here's the dialog box that you will use in the new system to identify the location of the datastream file you wish to submit.

Once the file is submitted in the new iEdison, the system processes the data exactly the same as in the original system. You will receive an e-mail confirmation of receipt and details as to how many records were sent, which ones were o.k. and which ones were rejected because of errors.

Any errors found in the file are detailed in the e-mail so you can make corrections before re-submitting.

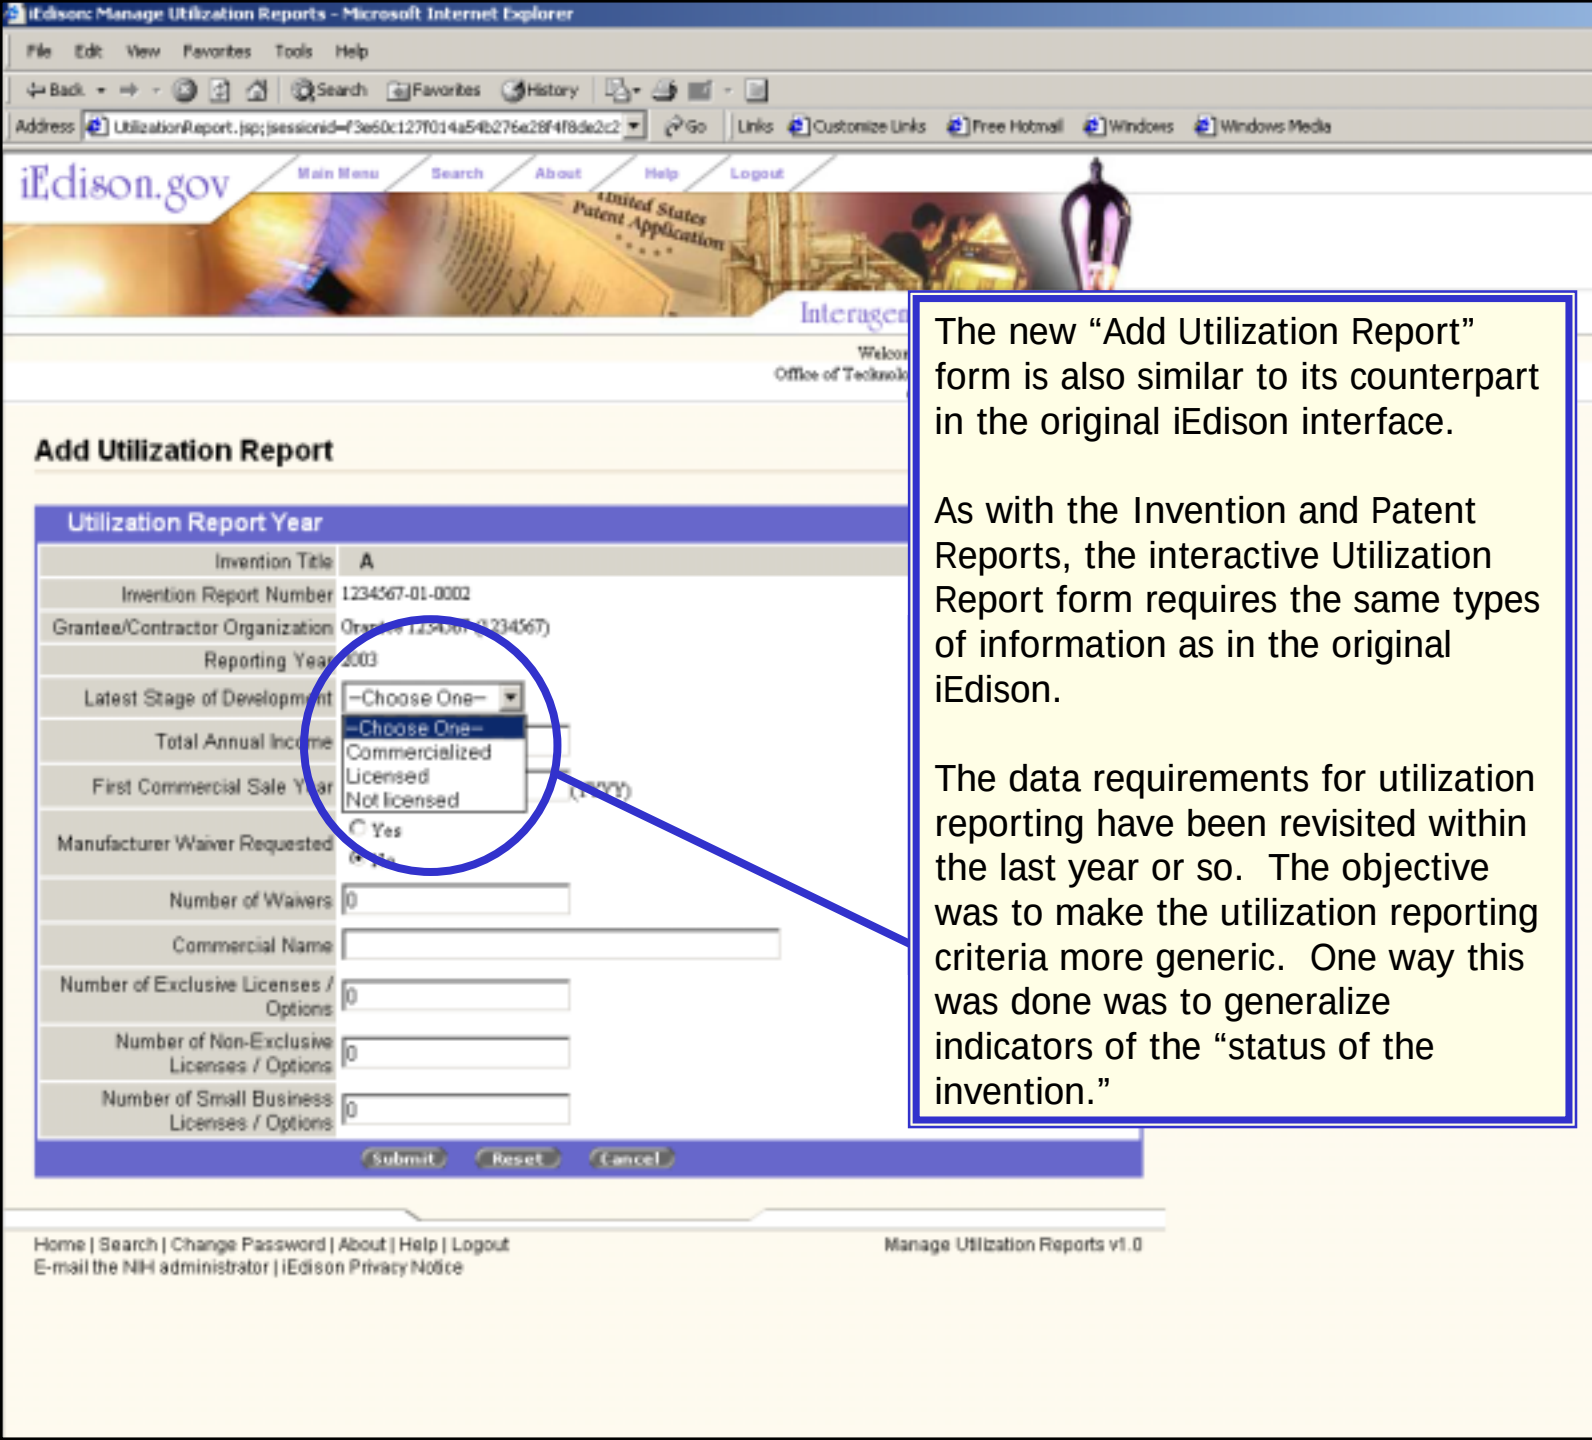
The first step in the utilization report is to indicate the year for which utilization is being reported. This choice has been provided to allow you to report on prior years, once the information is available.



The new “Add Utilization Report” form is also similar to its counterpart in the original iEdison interface.

As with the Invention and Patent Reports, the interactive Utilization Report form requires the same types of information as in the original iEdison.

The data requirements for utilization reporting have been revisited within the last year or so. The objective was to make the utilization reporting criteria more generic. One way this was done was to generalize indicators of the “status of the invention.”
