

New MARC 21 Values/Fields: Summary

2004 TAG TABLE CHANGES FOR VOYAGER 2000.1.3

This document summarizes changes to the LC ILS Tag Tables (LCMARC21) made available in September of 2004. The new elements and changes to elements come primarily from Update No. 3 (October 2002) to the MARC 21 Formats for Bibliographic and Authority data.

Although these data elements are now valid in the LC ILS, not all of them will be actively supplied in LC cataloging (they may occur as “pass through” data elements in records done as copy cataloging). In general, this document summarizes the subset of newly available data elements from two aspects: 1) those to begin actively supplying; 2) those NOT to supply (those not actively supplied should be considered “pass through” data elements). This summary is relevant to general cataloging (all cataloging for the data elements NOT to supply). Application of newly available data elements relevant to cataloging done in the special format divisions will be determined by staff in those divisions, as will the guidelines for their application.

NOTE: Implementation decisions related to Update No. 4 (October 2003) to the MARC 21 formats are currently under negotiation; new elements/practices from Update No. 4 are **not** to be implemented by LC staff until further notice. Also deferred for now are two major changes from Update No. 2 (October 2001), the definition of a new bibliographic level code “i” for Integrating resources, and revisions to field 260 have been deferred until the bibliographic utilities are in a position to accept the values.

*****Staff should evaluate any customized templates and/or macros they may have developed to determine if these changes have an impact*****
