**2006 TAG TABLE CHANGES FOR VOYAGER WITH UNICODE**

This document summarizes changes to the LC ILS Tag Tables (UnicodeLCMARC21) made available in May of 2006.

Although these data elements are now valid in the LC ILS, not all of them will be actively supplied in LC cataloging (they may occur as "pass through" data elements in records done as copy cataloging). In general, this document summarizes the subset of newly available data elements from two aspects: 1) those to begin actively supplying; 2) those NOT to supply (those not actively supplied should be considered "pass through"data elements, unless otherwise indicated). This summary is relevant to general cataloging (all cataloging for the data elements NOT to supply). Application of newly available data elements relevant to cataloging done in the special format divisions will be determined by staff in those divisions, as will the guidelines for their application.

**NOTE:** Implementation decisions related to Update No. 6 (not yet published, but will be dated October 2005) to the MARC 21 formats are currently under negotiation; new elements/practices from Update No. 6 are **not** to be implemented by LC staff until further notice.

***Staff should evaluate any customized templates and/or macros they may have developed to determine if these changes have an impact\*\*\****
