

KP- 1461

Drug Class: Nucleoside Reverse Transcriptase Inhibitors

KP-1461, also known as SN1461 and SN1212, is a type of medicine called a nucleoside analogue. KP-1461 works by introducing changes to HIV's genetic makeup that eventually kill the viral particles.

HIV/AIDS-Related Uses

KP-1461 is an investigational medicine that is not yet approved by the FDA for use outside of clinical trials. It is being studied for the treatment of HIV-1 infection. This medicine does not cure or prevent HIV infection or AIDS and does not reduce the risk of passing the virus to other people.

Dosage Form/Administration

KP-1461 is taken by mouth.

Contraindications

Individuals should tell a doctor about any medical problems before taking this medicine.

Possible Side Effects

Along with its desired effects, KP-1461 may cause some unwanted effects. Not all of these effects are known; further study is needed to identify side effects.

Drug and Food Interactions

A doctor should be notified of any other medications being taken, including prescription, nonprescription (over-the-counter), or herbal medications.

Clinical Trials

For information on clinical trials that involve KP-1461, visit the ClinicalTrials.gov web site at <http://www.clinicaltrials.gov>. In the Search box, enter: KP-1461 AND HIV Infections.
