Summary Statements for Program Project Applications - P01s

The Program Project mechanism is designed to support research in which the funding of several projects as a group offers significant scientific advantages over support of these same projects as individual regular research grants.

The Summary Statement should reflect the level of enthusiasm of the Study Section.

> • All narratives must be consistent with the score.

> • NIH wants especially to know about the importance of the problem, its timeliness, whether the participants can do the work, and what value derives from supporting this joint effort.   In short - **Is this the right time to do this project with this group?**
