Obj #	Objective	Partners N≈70	Disparities N=8				
	HEALTHY PEOPLE						
	Infants and Toddlers						
1	Reduce infectious diseases and preventable conditions	51%	62%				
	Prevent injury and violence and consequences						
3	Promote healthy pregnancies and birth outcomes	46%	57%				
4	Promote optimal development						
5	Increase dealings with special health and dev. needs	37%					
6	Increase # living in envts that support health and safety						
7	Increase # who receive comprehensive pediatric care		57%				
8	Improve risk and protective factors for future disease		75%				
	Children, Ages 4 to 11						
9	Prevent chronic diseases and consequences		43%				
10	Prevent infectious diseases and consequences	46%					
11	Prevent injury, violence, and consequences						
12	Increase dealings with special health and dev. needs						
13	Increase # living in envts that support health and safety		75%				
14	Increase # who receive comprehensive pediatric care	37%					
	Improve risk and protective factors for future disease		50%				
	Adolescents, Ages 12-19	-					
16	Increase # living in envts that support health and safety		50%				
	Increase # who receive recommended health services						
18	Prevent injury, violence, suicide, and consequences						
	Prevent HIV, STDs, and unintended pregnancy						
20	Promote healthy activity, nutrition; prevent overweight	43%	62%				
	Prevent substance use	43%	50%				
	Adults, Ages 20-49						
22	Prevent chronic diseases and consequences	66%	43%				
	Prevent infectious diseases and consequences						
24	Prevent injury, violence, suicide, and consequences						
	Promote reproductive and sexual health						
26	Increase # living in envts that support health and safety		50%				
	Increase # who receive recommended health services	51%					
28	Improve risk and protective factors for future disease	49%	62%				
	Older Adults and Elderly, Ages 50+						
	Prevent chronic diseases and consequences	46%					
	Prevent infectious diseases and consequences						
	Prevent injury, violence, suicide, and consequences						
	Promote independence and optimal functioning						
	Increase # living in envts that support health and safety						
	Increase # who receive recommended health services						
	Improve risk and protective factors for future disease	40%
