Product information, including uses/applications and source(s) of imports:

Brass lamp-holder housings containing sockets are one type of lamp-holder (bulb holder). Lamp-holders provide an electrical housing for bulb insertion in various types of lighting fixtures. Lamp-holders vary in style, range of rating, and materials and may be used for use incandescent or fluorescent lighting devices. There are numerous configurations, including snap-in, plug-in, and screw-in, based on end-use requirements. Brass lamp-holder housings containing sockets are typically chosen for particular lighting devices for aesthetic reasons, such as in high-end household table lamps. Products made of brass can often support higher heat applications, compared to products made of aluminum. The principal U.S. import sources of this product are China, Germany and Mexico.⁴ Dutiable U.S. imports of all lamp-holders classified in subheading 8536.61.00 (of any materials) totaled \$49.3 million in 2007.
