Effects of Decision to Implement

Approval of the new cost allocation study will (1) increase the share of the costs which are to be repaid by the

water users, and (2) reduce the share of the costs distributed to nonreimbursable purposes. There will be an increase in the cost of water supplied by the project.

Water and Power Supplies

CVP water is delivered under terms of long-term water service contracts. Project water is supplied for irrigation; domestic, municipal, and industrial uses; waterfowl conservation; and wildlife refuges. Hydroelectric power is generated by the project to meet project pumping requirements. Any surplus power is sold to the preference power customers to aid in the recovery of costs of the project.

Service Area

The authorized service area includes portions of the Central Valley Basin and part of the Central Coastal Area of California.

Title: Gas Transportation and Processing Allowances

Abstract

When a company enters into a contract to develop, produce and dispose of gas and associated products from Federal or Indian lands, that company agrees to pay the United States or Indian Tribe or allottee a share (royalty) of the full value of production from the leased lands. In order to determine whether the amount of royalty tendered represents the proper royalty due, it is necessary to establish

the value of allowances being deducted from royalty payments. Allowances are taken for the cost of processing the gas stream to extract associated products, and for the cost of transporting the gas to the processing plant and to the point of first sale. The information collected is necessary to evaluate the reasonableness of allowances taken, and ensure that proper royalty payments are made.
