* Joinpoint analysis of trends allowed for up to three joinpoints based on rates per 100,000 that were age-adjusted to the 2000 U.S. standard population.

† Death data are from the National Vital Statistics System of the National Center for Health Statistics; the data cover the entire U.S. population.

‡ APC is the Annual Percent Change based on rates age-adjusted to the 2000 U.S. standard population using the joinpoint regression program.

§ APC is statistically significantly different from zero (two-sided p<.05).

¶ Joinpoint results are not shown if less than 10 cases in any year.
