Summary: R/V <i>Gyre</i> cruise 94G-11	1
Station Locations of XBTs: R/V <i>Gyre</i> cruise 94G-11	2
Summary: R/V <i>Gyre</i> cruise 95G-01	3
Station Locations of XBTs: R/V <i>Gyre</i> cruise 95G-01	4
XBT Data: R/V <i>Gyre</i> cruise 94G-11	5 - 97
XBT Data: R/V <i>Gyre</i> cruise 95G-01	98 - 245
CTD Data: R/V <i>Gyre</i> cruise 95G-01	246 - 254
Acknowledgments	255

SUMMARY

XBTs provided by the LATEX-C program were dropped as opportunity allowed on two cruises of R/V *Gyre*. The first of these cruises was an 8-day trip from Galveston to Galveston, for the final recovery of LATEX-A current meters (94G-11, 29 Nov - 6 Dec 1994). The second was a 5-day trip from Galveston to Galveston, for piston coring by the Geochemical and Environmental Research Group (31 Jan - 4 Feb 1995).

R/V Gyre cruise 94G-11: Dr. Robert Hamilton (Evans Hamilton, Inc.), Chief Scientist

31 XBTs were deployed in water depths ranging from 102 m - 435 m along the outer continental shelf and upper slope, in conjunction with the recovery of LATEX current meter moorings. The SSH anomaly map distributed by the Colorado Center for Astrodynamics Research (CCAR) for the Topex cycle closest in time to the cruise shows a weakly anticyclonic circulation over the western part of the Texas shelf and a weak cyclonic circulation to the east:

Gulf of Mexico - Sea Surface Height Anomaly w.r.t. Along Track Corrected Rapp Mean Surface TOPEX Cycle 80 - Nov 15 to Nov 25, 1994

** = water depth < 15C depth

SUMMARY (continued)

R/V Gyre cruise 95G-01: Mr. Hugh Bernard (TAMU-GERG), Chief Scientist

23 XBTs were dropped as opportunity allowed over the LATEX slope during a GERG charter for piston coring. In addition, a CTD cast to 800 m was made at 27°22N, 90°50W. These hydrographic data of opportunity resolved that there was a broad region of cyclonic circulation over the continental margin of the NW Gulf west of 92°W. This cyclone is visible in the SSH anomaly map distributed by the Colorado Center for Astroynamics Research (CCAR) for Topex cycle 87:

**Gulf of Mexico - Sea Surface Height Anomaly
w.r.t. Along Track Corrected Rapp Mean Surface
TOPEX Cycle 87 - Jan 24 to Feb 3, 1995**

Altimetry data and contour plot are courtesy of R. Leben, CCAR

ACKNOWLEDGMENTS

Shiptime for R/V *Gyre* cruise 94G-11 was provided by the Texas-Louisiana Shelf Circulation Program (LATEX-A), with additional funding by the Department of Oceanography of Texas A&M University. XBT data were collected by Eddie Webb, with assistance from Stephen Walker.

Shiptime for R/V *Gyre* cruise 95G-01 was provided by the Geochemical and Environmental Research Group (GERG). XBT and CTD data were collected by RV Pittman and Chuck Pollock.

Dr. Robert Leben (CCAR/University of Colorado) provided the altimetric maps of Sea Surface Height anomaly for the Topex cycles closest in time to each of these cruises (see pp 1 and 3 of this report). These and other Topex altimetry data that are posted on the Gulf of Mexico Home Page which CCAR supports on the World Wide Web (<http://shaman.colorado.edu/gom.html>) were extremely useful for giving a regional context for the hydrographic observations of opportunity.

The preparation of this data report was supported by the Minerals Management Service, under Cooperative Agreement 14-35-0001-30501 for the sharing of ship-of-opportunity hydrographic data between Texas A&M University and MMS.

The Department of the Interior Mission

As the Nation's principal conservation agency, the Department of the Interior has responsibility for most of our nationally owned public lands and natural resources. This includes fostering sound use of our land and water resources; protecting our fish, wildlife, and biological diversity; preserving the environmental and cultural values of our national parks and historical places; and providing for the enjoyment of life through outdoor recreation. The Department assesses our energy and mineral resources and works to ensure that their development is in the best interests of all our people by encouraging stewardship and citizen participation in their care. The Department also has a major responsibility for American Indian reservation communities and for people who live in island territories under U.S. administration.

The Minerals Management Service Mission

As a bureau of the Department of the Interior, the Minerals Management Service's (MMS) primary responsibilities are to manage the mineral resources located on the Nation's Outer Continental Shelf (OCS), collect revenue from the Federal OCS and onshore Federal and Indian lands, and distribute those revenues.

Moreover, in working to meet its responsibilities, the **Offshore Minerals Management Program** administers the OCS competitive leasing program and oversees the safe and environmentally sound exploration and production of our Nation's offshore natural gas, oil and other mineral resources. The MMS **Minerals Revenue Management** meets its responsibilities by ensuring the efficient, timely and accurate collection and disbursement of revenue from mineral leasing and production due to Indian tribes and allottees, States and the U.S. Treasury.

The MMS strives to fulfill its responsibilities through the general guiding principles of: (1) being responsive to the public's concerns and interests by maintaining a dialogue with all potentially affected parties and (2) carrying out its programs with an emphasis on working to enhance the quality of life for all Americans by lending MMS assistance and expertise to economic development and environmental protection.
