PREFACE

In September 1980, the Geological Survey of Alabama and the U.S. Fish and Wildlife Service signed a cooperative agreement to conduct a characterization study of Mobile and Baldwin Counties, Alabama's coastal counties. The purpose of this study was to assemble and analyze available data on the environmental and socioeconomic facets of coastal Alabama. A second but nevertheless important responsibility was to identify geographic areas or disciplines for which limited information existed.

Primary to the data synthesis portion of the characterization study was the review and compilation of all or most of the noteworthy published and unpublished reports and available data concerning ongoing studies in coastal Alabama. Once collected, all references were formatted and placed on computer tape for sorting and retrieval.

Potential users of the coastal Alabama bibliography include industrial and governmental officials, planners, developers, scientists, and interested citizens. Copies of this report may be obtained by writing to either of the following addresses:

INTRODUCTION

Although small compared to other southeastern states, Alabama's coastal area is rich in natural and economic resources. Future development in this high interest area will undoubtedly result in competition for space and resources between such activities as recreation, commercial fishing, resource development, industrial development, and land use. In order to make responsible management decisions concerning the future use of coastal resources, governmental officials, planners, and scientists must have a broad and extensive information base.

The primary goal of the coastal Alabama bibliography is to provide such a comprehensive information base to potential users of Alabama's coastal areas and resources. The bibliography is comprised of published and unpublished studies that describe the socio-economic structure and environmental setting of coastal Alabama. Entries include papers from professional journals, unpublished theses and dissertations, unpublished open-file reports, symposia proceedings, ongoing studies, and governmental documents. Ideally, the bibliography should be used in conjunction with the companion reports on socioeconomic and ecological characterization studies for a comprehensive understanding of coastal Alabama processes and resources.

METHODS

Information entered into the bibliography was obtained from a variety of sources. Initially, published bibliographies such as those from GURC (Gulf Universities Research Consortium 1979) and Lipp and Chermock (1975) were used to establish a base reference list. Once this information was verified and

formatted, other studies were reviewed and, when pertinent, added to the bibliography. In addition, various local, state and federal agencies and colleges and universities were contacted for pertinent information. Agencies and research institutions found to be most helpful in our information search included the U.S. Fish and Wildlife Service, U.S. Army Corps of Engineers, Gulf Coast Research Laboratory, Mississippi-Alabama Sea Grant Consortium, Dauphin Island Sea Lab, Alabama Department of Conservation (including the Marine Resources Laboratory), South Alabama Regional Planning Commission, and the Alabama Coastal Area Board.

Information was managed using a computer-based information storage and retrieval system known as FAMULUS. Bibliographic entries into the FAMULUS system were formatted according to the following scheme:

AUTH	author(s)
DATE	date
TITL	title
SRCE	source
KEYW	keywords

All citations followed the Council of Biology Editors (CBE) 3rd edition style manual (1972). Bibliographical sources were abbreviated according to the Biosciences Information Services (BIOSIS, 1980). In those cases where a source was not listed in BIOSIS, an abbreviation was constructed by using convention in BIOSIS and CBE. For citations involving government agencies, a location of the agency through which the study was conducted or where further information may be obtained is given, unless the agency publishes a named journal on a regular basis (Table 1).

Compilation of keywords for bibliographic entries followed a basic outline for categorizing citations (Table 2). A locator keyword, if given, confines the study to a particular region such as Mobile County, Mobile Bay, Mobile Delta, Gulf of Mexico, etc. A discipline keyword, if given, is used to identify a scientific discipline. For example, botany, zoology, geology, hydrology, ecology, etc. The organism group keywords are limited, of course, to biological studies and identifies major groups of organisms. For example, fishes, oysters, birds, or in some cases a scientific name. Modifying keywords describe the major theme or processes identified in the citation. For example, land use, taxonomy, distribution, transportation, population, etc.

Most citations conform to the classification scheme explained above. However, some citations did not fit the classification and consequently were keyworded totally at our discretion.

Studies cited in the bibliography that are ongoing in Alabama's coastal area have an additional field in the citation. Annotations (ANOT) briefly describe the study to orient the user to the scope of work.

In the bibliographic listing, entries are arranged alphabetically by author and/or agency. Each entry is assigned a citation number located in the left-hand column.

The keyword index consists of two parts: (1) a subject index which lists topics according to discipline and (2) a geographic index. Following each index keyword is a list of citation numbers which cross references the user back to the bibliography.

DEPARTMENT OF THE INTERIOR
U.S. FISH AND WILDLIFE SERVICE

As the Nation's principal conservation agency, the Department of the Interior has responsibility for most of our nationally owned public lands and natural resources. This includes fostering the wisest use of our land and water resources, protecting our fish and wildlife, preserving the environmental and cultural values of our national parks and historical places, and providing for the enjoyment of life through outdoor recreation. The Department assesses our energy and mineral resources and works to assure that their development is in the best interests of all our people. The Department also has a major responsibility for American Indian reservation communities and for people who live in island territories under U.S. administration.
