

INTRODUCTION

The Southeast Fisheries Science Center (SEFSC) is one of five regional fishery research centers of the National Marine fisheries Service (NMFS). In 1970, the NMFS was organized as a component of the National Oceanic and Atmospheric Administration (NOAA) in the U.S. Department of Commerce. The Fisheries Science Centers provide scientific information required for decisions relating to the conservation and management of fishery resources, and the protection of fishery habitats, endangered and threatened species.

In 1972, the NOAA Technical Memorandum series was established and the Southeast Fisheries Science Center began the publication of research reports. The purpose of this series is timely dissemination of the results of scientific research. The series also affords the SEFSC a means of publishing research results in greater depth and detail than is normally allowed by scientific journals, which usually have stringent length restrictions.

To address the difficulties of identification and location of these publications, we present the continuing list of SEFSC Technical Memoranda as they are published. *They are available from their originating laboratories or from the National Technical Information Service for a fee.* A directory of these sources are listed as follows:
