Prescription 8 Commercial Wood - Matrix	0		80	10,920	11,000
TOTALS	12,114	5	25,891	165,467	203,477

When post-fire imagery is acquired after mid-September, severity may be increasingly under-represented due to low sun angles. Severity on north facing slopes can be hidden due to topographic shadows. Low to moderate severity in dense stands on east, west or south aspects may also be under-represented due to a low illumination angle.
