Bid Pricing Tool 2007 – Version 2 Release Notes
May 9, 2006

The following is a list of changes/enhancements included in version 2 of the 2007 MA and PD BPTs herein referenced as version 2007.2. You must download and install the latest version of the add-in file (BPT.xla) to update your BPT workbooks.

To confirm the update has been applied to your BPT, verify that "2007.2" appears in the upper right corner of worksheet 1. If you need additional information on updating your BPT.xla file see the BPT Technical Instructions available on HPMS.

1. MA workbook, worksheet 6, cell K15
   Added formula: =IF(K5="Part B Only",404,"n/a")
   Reason: When Enrollee Type is Part B Only, this cell should display 404; otherwise it should display "n/a".

2. MA workbook, worksheet 6, cell M27
   Removed validation: =IF(MOD(M27,0.1) > 0, FALSE, TRUE)
   Reason: This validation formula was incorrectly generating an error (red circle).

3. PD workbook, worksheet 1, cell M5
   Changed Text Selection: The PD Region "NA" selection has been changed to "N/A".
   Reason: Correct an error generated during the PBP validation process.

4. PD workbook, worksheet 1, cell M5
   Changed Finalization Value: When the BPT is finalized, a blank PD region will be set to the value "N/A".
   Reason: Correct an error generated during the PBP validation process.

5. MA workbook, worksheet 1, cell K6
   Fixed Refresh issue: If the plan type is linked to an external data source, and the source was changed from RPPO to a non-RPPO value, the MA region cell will be refreshed to display "N/A" if user performs any of the following actions: 1) Opens the BPT; 2) Clicks the BPT refresh button; 3) Saves the BPT; or 4) Finalizes the BPT.
   Reason: Correct an error generated during the PBP validation process.

6. MA and PD workbooks
   New Feature: A new BPT specific command, "BPT Refresh", has been added to the Standard Toolbar and the File menu. This command will refresh all values in cells linked to external data sources. This command will be automatically invoked by the BPT upon opening, saving and finalizing a workbook.
   Reason: Values in externally linked cells (see list below) were not automatically refreshed and consequently not validated by the BPT logic.
   - Plan Type (MA worksheet 1, cell G7)
   - Plan Type (PD worksheet 1, cell I6)
   - PD Benefit Type (PD worksheet 1, cell M6)
   - Contract Number (MA worksheet 1, cell D5)
   - Use of ISAR (MA worksheet 5, cell G31)
