ntp alternative toxicology methods instead of abusing and torturing animals - of course we need to move into 2007 methods and not still use what was used in 1500 ad

live animals are live sentient beings. they can feel pain. they can feel abuse. we should never be using dogs/cats, sheep, or any animals for testing.

this method of using animals was started in 1500 a.d. why in 2007 have we not moved to more modern, more accurate methods than this? animals cannot talk and tell you what they feel different when poisoned by toxics.

people testing makes more sense. but certainly computer models and other more modern methods must be used instead of this abuse of animals.

i support the move. the sooner the better.
