Comments: It is imperative that ICCVAM officials accept internationally validated non-animal methods, including non-animal test methods for skin and eye irritation, phototoxicity, and pyrogenicity (fever induction).

In our technologically-advanced society alternative methods to animal testing have been as successful, if not more so, than outdated "conventional" methods of testing.

Please, lead by example. Animal-testing is cruel, outdated, unnecessary and unjustifiable.

It's time for change.
