

Dear Dr. Stokes:

In reference to the above FR submittal for CertiChem, I support the notion that a valid assay is decidedly needed to assess all sorts of products or chemicals for EA. CertiChem's MCF-7 assay should be reliable sensitive and accurate to test for EA. Therefore, it is very important that ICCVAM validate this assay from CertiChem as reliable sensitive and accurate.

Please don't hesitate to call if you have any questions.

Regards,
