

Dear Sirs,

I strongly support PETA's position: ALL government agencies that currently require the acute animal-poisoning studies should IMMEDIATELY incorporate the in vitro cell culture method as a transitional means of reducing the number of animals killed and should fully support the use of this method as an eventual REPLACEMENT for lethal-dose poisoning studies. In particular, the EPA must immediately incorporate the non-animal cell culture method into its HPV chemical program, as promised in **its October 1999 agreement with the animal protection community**. Modern science is available and there is less suffering. It's a no-brainer guys.
